## Exam Questions MS-100

Microsoft 365 Identity and Services

## About ExamBible

### *Your Partner of IT Exam*

## Found in 1998

ExamBible is a company specialized on providing high quality IT exam practice study materials, especially Cisco CCNA, CCDA, CCNP, CCIE, Checkpoint CCSE, CompTIA A+, Network+ certification practice exams and so on. We guarantee that the candidates will not only pass any IT exam at the first attempt but also get profound understanding about the certificates they have got. There are so many alike companies in this industry, however, ExamBible has its unique advantages that other companies could not achieve.

## Our Advances

### \* 99.9% Uptime

All examinations will be up to date.

### \* 24/7 Quality Support

We will provide service round the clock.

### \* 100% Pass Rate

Our guarantee that you will pass the exam.

### \* Unique Gurantee

If you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

NEW QUESTION 1

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You hire a new Microsoft 365 administrator named Nestor Wilke. Nestor Wilke will begin working for your organization in several days.

You need to ensure that Nestor Wilke is prevented from using his account until he begins working.

A. Mastered

B. Not Mastered

Answer: A

Explanation:

You need to sign-in status for the account to 'Blocked'. Blocking doesn't stop the account from receiving email and it doesn't delete any data.

\* 1. On the home page of the Microsoft 365 admin center, type the user's name into the Search box.

\* 2. Select the Nestor Wilke account in the search results.

\* 3. In the 'Sign-in status' section of the account properties, click the Edit link.

\* 4. Select 'Block the user from signing in' and click the Save button.

NEW QUESTION 2

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains the users shown in the following table.

Name	Group
User1	Group1
User2	Group1, Group2

You have the named locations shown in the following table.

Named location	IP range
Montreal	133.107.0.0/16
Toronto	193.77.10.0/24

You create a conditional access policy that has the following configurations:

Users and groups:

> Include: Group1

> Exclude: Group2

Cloud apps: Include all cloud apps

Conditions:

> Include: Any location

> Exclude: Montreal

Access control: Grant access, Require multi-factor authentication User1 is on the multi-factor authentication (MFA) blocked users list.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can access Microsoft Office 365 from a device that has an IP address of 133.107.10.20.	<input type="radio"/>	<input type="radio"/>
User1 can access Microsoft Office 365 from a device that has an IP address of 193.77.10.15.	<input type="radio"/>	<input type="radio"/>
User2 can access Microsoft Office 365 from a device that has an IP address of 193.77.10.20.	<input type="radio"/>	<input type="radio"/>

A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

The Blocked User list is used to block specific users from being able to receive Multi-Factor Authentication requests. Any authentication attempts for blocked users are automatically denied. Users remain blocked for 90 days from the time that they are blocked.

Box 1: Yes

\* 133.107.10.20 is in the Montreal named location. The conditional access policy excludes Montreal so the policy does not apply. Therefore, User1 can access Microsoft Office 365.

Box 2: No

\* 193.77.10.15 is in the Toronto named location. The conditional access policy applies to Group1 which User1 is a member of and all locations except for Montreal. Therefore, the conditional access policy applies in this case. The policy requires MFA but User1 is on the MFA blocked list so he is unable to use MFA. Therefore, User1 cannot access Microsoft 365.

Box 3: Yes

User2 is in Group1 and Group2. The conditional access policy applies to Group1 but excludes Group2.

Therefore, the conditional access policy does not apply in this case so User2 can access Microsoft Office 365. Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-mfasettings>

**NEW QUESTION 3**

- (Exam Topic 5)

You have the Microsoft Azure Active Directory (Azure AD) users shown in the following table.

Name	Member of
User1	Group1
User2	Group2

Your company uses Microsoft Intune.

Several devices are enrolled in Intune as shown in the following table.

Name	Platform	BitLocker Drive Encryption	Member of
Device1	Windows 10	Disabled	Group3
Device2	Windows 10	Disabled	Group4

The device compliance policies in Intune are configured as shown in the following table.

Name	Require BitLocker	Assigned to
Policy1	Not configured	Group3
Policy2	Require	Group4

You create a conditional access policy that has the following settings:

➤ The Assignments settings are configured as follows:

- Users and groups: Group1

- Cloud apps: Exchange Online

- Conditions: Include All device state, exclude Device marked as compliant

➤ Access controls is set to Block access.

For each of the following statements, select yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can access Microsoft Exchange Online from Device1.	<input type="radio"/>	<input type="radio"/>
User1 can access Microsoft Exchange Online from Device2.	<input type="radio"/>	<input type="radio"/>
User2 can access Microsoft Exchange Online from Device2.	<input type="radio"/>	<input type="radio"/>

A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

Box 1:

Yes. User1 is in Group1. The Conditional Access Policy applies to Group1. The Conditional Access Policy blocks access unless the device is marked as compliant.

BitLocker is disabled for Device1. Device1 is in Group3 which is assigned device Policy1. The BitLocker policy in Policy1 is 'not configured' so BitLocker is not required.

Therefore, Device1 is compliant so User1 can access Exchange online from Device1. Box 2:

No. User1 is in Group1. The Conditional Access Policy applies to Group1. The Conditional Access Policy blocks access unless the device is marked as compliant.

BitLocker is disabled for Device2. Device2 is in Group4 which is assigned device Policy2. The BitLocker policy in Policy2 is 'Required so BitLocker is required.

Therefore, Device2 is not compliant so User1 cannot access Exchange online from Device2. Box3:

Yes. User2 is in Group2. The Conditional Access Policy applies to Group1. The Conditional Access Policy does not apply to Group2. So even though Device2 is non-compliant, User2 can access Exchange Online using Device2 because there is no Conditional Access Policy preventing him/her from doing so.

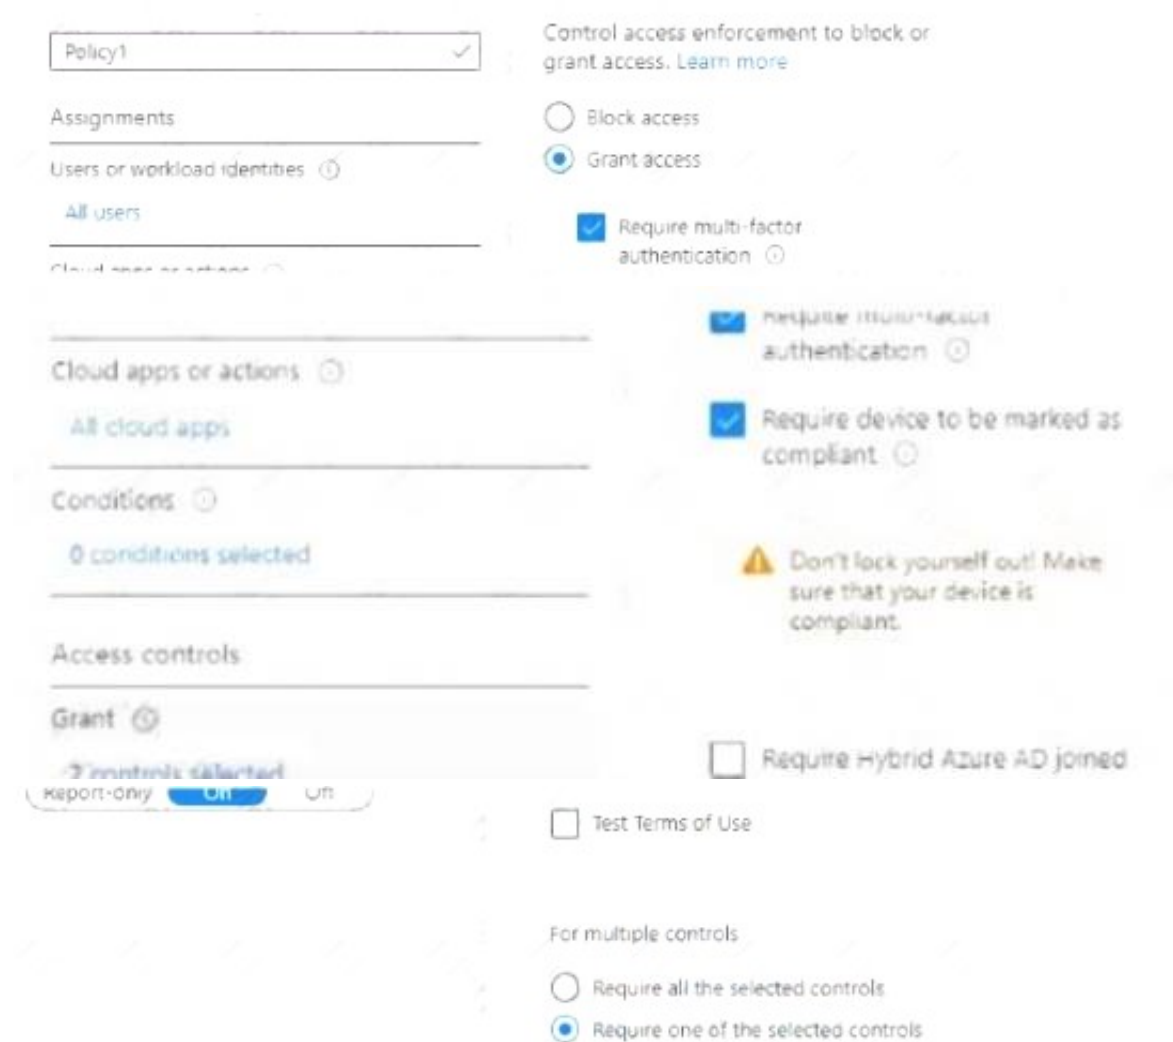

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/conditions>

#### NEW QUESTION 4

- (Exam Topic 5)

You have a Microsoft 365 subscription that has Conditional Access policy named Policy1. Policy1 is configured as shown in the following exhibit.

Control access enforcement to block or grant access. [Learn more](#)

Block access  
☒ Grant access

☒ Require multi-factor authentication

☒ Require Microsoft account authentication

☒ Require device to be marked as compliant

Don't lock yourself out! Make sure that your device is compliant.

☐ Require Hybrid Azure AD joined

☐ Test Terms of Use

For multiple controls  
☐ Require all the selected controls  
☒ Require one of the selected controls

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

If a user signs in from a compliant device, the sign in will [answer choice].

be allowed  
 be blocked  
 prompt for multi-factor authentication (MFA)

If a user signs in from an unmanaged device, the sign in will [answer choice].

be allowed  
 be blocked  
 prompt for multi-factor authentication (MFA)

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

Graphical user interface, text, application Description automatically generated

#### NEW QUESTION 5

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You need to identify all the users in the subscription who are licensed for Microsoft Office 365 through a group membership. The solution must include the name of the group used to assign the license.

What should you use?

- A. the Licenses blade in the Azure portal
- B. Reports in the Microsoft 365 admin center
- C. Active users in the Microsoft 365 admin center
- D. Report in Security & Compliance

**Answer: A**

#### Explanation:

In the Azure AD Admin Center, select Azure Active Directory then select Licenses to open the Licenses blade. From there you need to click on the 'Managed your purchased licenses link'. Select a license you want to view, for example Office 365 E3. This will then display a list of all users with that license. In the 'Assignment Paths' column, it will say 'Direct' for a license that has been assigned directly to a user or 'Inherited (Group Name)' for a license that has been assigned through a group.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

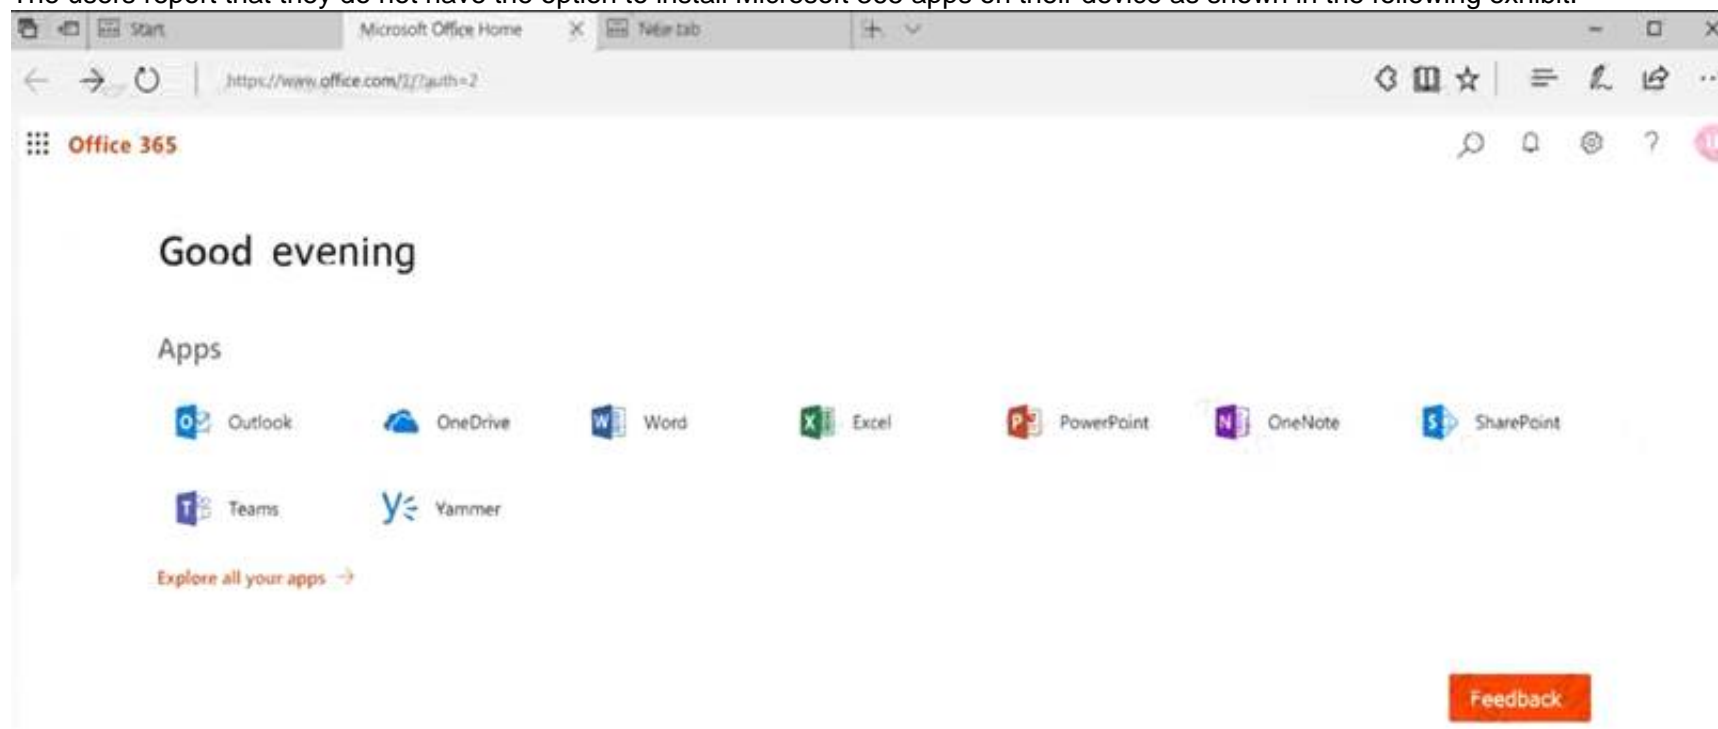

## NEW QUESTION 6

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription.

All users are assigned a license to Microsoft 365 Apps for enterprise.

The users report that they do not have the option to install Microsoft 365 apps on their device as shown in the following exhibit.

You need to ensure that the users can install Microsoft 365 apps from the Office 365 portal.

What should you do?

- A. From the Microsoft 365 admin center, modify the user license settings.
- B. From the Microsoft Endpoint Manager admin center, create a Microsoft 365 Apps app and assign the app to the devices.
- C. From the Microsoft Endpoint Manager admin center, create a Microsoft 365 Apps app and assign the app to the users.
- D. From the Microsoft 365 admin center, modify the Services & add-ins settings.

**Answer: D**

## NEW QUESTION 7

- (Exam Topic 5)

You have a DNS zone named contoso.com that contains the following records.

```
@           IN      SOA    dns1.contoso.com. hostmaster.contoso.com. (
                                539           ; serial number
                                900           ; refresh
                                600           ; retry
                                86400        ; expire
                                3600          ) ; default TTL

@           NS       dns1.contoso.com.

@           MX       10    server1.contoso.com.
@           TXT       ( "v=spf1 a include:server1.contoso.com -all" )
Server1     A         193.77.10.15
```

You purchase a Microsoft 365 subscription.

You plan to migrate mailboxes to Microsoft Exchange Online.

You need to configure Sender Policy Framework (SPF) to support Exchange Online. What should you do?

- A. Add an additional TXT record.
- B. Modify the TXT record.
- C. Modify the expire interval of the SOA record.
- D. Modify the default TTL of the SOA record.

**Answer: B**

### Explanation:

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/set-up-spf-in-office-365-to-help-pre>

## NEW QUESTION 8

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains 1,000 Windows 10 devices.

You perform a proof of concept (PoC) deployment of Windows Defender Advanced Threat Protection (ATP) for 10 test devices. During the onboarding process, you configure Windows Defender ATP-related data to be stored in the United States.

You plan to onboard all the devices to Windows Defender ATP data in Europe. What should you do first?

- A. Create a workspace
- B. Offboard the test devices
- C. Delete the workspace

D. Onboard a new device

**Answer:** B

**Explanation:**

When onboarding Windows Defender ATP for the first time, you can choose to store your data in Microsoft Azure datacenters in the European Union, the United Kingdom, or the United States. Once configured, you cannot change the location where your data is stored.

The only way to change the location is to offboard the test devices then onboard them again with the new location.

Reference:

<https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/data-storage-privac>

**NEW QUESTION 9**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

Your organization plans to open an office in New York, and then to add 100 users to the office. The city attribute for all new users will be New York.

You need to ensure that all the new users in the New York office are licensed for Microsoft Office 365 automatically.

A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

You need create a dynamic group based on the city attribute. You then need to assign a license to the group. User accounts with the city attribute set to 'New York' will automatically be added to the group. Anyone who is added to the group will automatically be assigned the license that is assigned to the group.

\* 1. Go to the Azure Active Directory admin center.

\* 2. Select Azure Active Directory then select Groups.

\* 3. Click on the New Group link.

\* 4. Give the group a name such as New York Users.

\* 5. Select Users as the membership type.

\* 6. Select 'Add dynamic query'.

\* 7. Select 'City' in the Property drop-down box.

\* 8. Select 'Equals' in the Operator drop-down box.

\* 9. Enter 'New York' as the Value. You should see the following text in the Expression box: user.city -eq "New York"

\* 10. Click Save to create the group.

\* 11. In the Groups list, select the new group to open the properties page for the group.

\* 12. Select 'Licenses'.

\* 13. Select the '+ Assignments' link.

\* 14. Tick the box to select the license.

\* 15. Click the Save button to save the changes. References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/groups-dynamic-membership> <https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

**NEW QUESTION 10**

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains the users shown in the following table.

Name	Email address
User1	User1@contoso.com
User2	User2@contoso.com
User3	User3@contoso.com

Microsoft Exchange Online has the mail flow rules shown in the following table

Name	Priority
Rule1	0
Rule2	1
Rule3	2

Rule1 has the following settings:

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input checked="" type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input checked="" type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 10

- (Exam Topic 5)  
You have a Microsoft 365 subscription.  
You have the devices shown in the following table.

Operating system	Quantity
Windows 8.1	5
Windows 10	5
Windows Server 2016	5

You need to onboard the devices to Windows Defender Advanced Threat Protection (ATP). The solution must avoid installing software on the devices whenever possible.  
Which onboarding method should you use for each operating system? To answer, drag the appropriate methods to the correct operating systems. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.  
NOTE: Each correct selection is worth one point.

Methods	Answer Area
A Microsoft Azure ATP sensor	Windows 8.1: <input type="text"/>
A local script	Windows 10: <input type="text"/>
Microsoft Monitoring Agent	Windows Server 2016: <input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:  
<https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-atp/onboard-downlevel-> <https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-atp/configure-endpoints> <https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-atp/configure-server-en> Box 1:  
To onboard down-level Windows client endpoints to Microsoft Defender ATP, you'll need to: Configure and update System Center Endpoint Protection clients. Install and configure Microsoft Monitoring Agent (MMA) to report sensor data to Microsoft Defender ATP Box 2:  
For Windows 10 clients, the following deployment tools and methods are supported: Group Policy  
System Center Configuration Manager  
Mobile Device Management (including Microsoft Intune) Local script

Box 3:

Windows Server 2016 can be onboarded by using Azure Security Centre. When you add servers in the Security Centre, the Microsoft Monitoring Agent is installed on the servers.

#### NEW QUESTION 11

- (Exam Topic 5)

Your network contains an Active Directory domain named adatum.com that is synced to Microsoft Azure Active Directory (Azure AD).

The domain contains 100 user accounts.

The city attribute for all the users is set to the city where the user resides.

You need to modify the value of the city attribute to the three-letter airport code of each city. What should you do?

- A. From Active Directory Administrative Center, select the Active Directory users, and then modify the Properties settings.
- B. From the Microsoft 365 admin center, select the users, and then use the Bulk actions option.
- C. From Azure Cloud Shell, run the Get-MsolUser and Set-MSOLuser cmdlets.
- D. From Windows PowerShell on a domain controller, run the Get-AzureADUser and Set-AzureADUser cmdlets.

**Answer:** A

#### Explanation:

The user accounts are synced from the on-premise Active Directory to the Microsoft Azure Active Directory (Azure AD). Therefore, the city attribute must be changed in the on-premise Active Directory.

You can modify certain attributes of multiple user accounts simultaneously by selecting them in Active Directory Administrative Center or Active Directory Users and Computers, right clicking then selecting Properties.

The other three options all suggest modifying the city attribute of the users in the Azure Active Directory which is incorrect.

Reference:

<https://blogs.technet.microsoft.com/canitpro/2015/11/25/step-by-step-managing-multiple-user-accounts-via-acti>

#### NEW QUESTION 13

- (Exam Topic 5)

You plan to migrate to SharePoint Online by using the SharePoint Migration Tool. Which list can be migrated to SharePoint Online?

Name	List template
List1	PictureLibrary
List2	Report Library
List3	Agenda
List4	AdminTasks

- A. List1
- B. List2
- C. List3
- D. List4

**Answer:** D

#### NEW QUESTION 15

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You plan to move several archived PST files to Microsoft Exchange Online mailboxes. You need to create an import job for the PST files.

Which three actions should you perform before you create the import job? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a Microsoft Azure Storage account.
- B. From Microsoft 365 Security & Compliance, retrieve the SAS key.
- C. Run azcopy.exe to copy the PST files to Microsoft Azure Storage
- D. Use Microsoft Azure Storage Explorer to copy the PST files to Azure Storage.
- E. Create a PST import mapping file.

**Answer:** BCE

#### Explanation:

The first step is to download and install the Azure AzCopy tool, which is the tool that you run in Step 2 to upload PST files to Office 365. You also copy the SAS URL for your organization. This URL is a combination of the network URL for the Azure Storage location in the Microsoft cloud for your organization and a Shared Access Signature (SAS) key. This key provides you with the necessary permissions to upload PST files to your Azure Storage location.

Now you're ready to use the AzCopy.exe tool to upload PST files to Office 365. This tool uploads and stores them in an Azure Storage location in the Microsoft cloud.

After the PST files have been uploaded to the Azure Storage location for your Office 365 organization, the next step is to create a comma-separated value (CSV) file that specifies which user mailboxes the PST files will be imported to. You'll submit this CSV file when you create a PST Import job.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/use-network-upload-to-import-pst-files>

#### NEW QUESTION 17

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will

be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. You may now click next to proceed to the lab. Lab information

The following information is for technical support purposes only:

Lab Instance: 11098651

You need to ensure that all the users in your organization are prompted to change their password every 180 days. To answer the question, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to configure the Password Expiration Policy.

- \* 1. Sign in to the Microsoft 365 Admin Center.
- \* 2. In the left navigation pane, expand the Settings section then select the Settings option.
- \* 3. Click on Security and Privacy.
- \* 4. Select the Password Expiration Policy.
- \* 5. Ensure that the checkbox labelled "Set user passwords to expire after a number of days" is ticked.
- \* 6. Enter 180 in the "Days before passwords expire" field.
- \* 7. Click the 'Save changes' button.

**NEW QUESTION 20**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. The following information is for technical support purposes only:  
Lab Instance: 11440873

You need to ensure that when Lynne Robbins attempts to sign in to the Microsoft Office 365 portal, Lynne Robbins is prompted to authenticate by using multiple methods.  
To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to enable Multi-Factor Authentication for Lynne Robbins.

- \* 1. Sign in to the Microsoft 365 Admin Center.
- \* 2. In the left navigation pane, expand the Users section and select Active Users.
- \* 3. Click the 'Multi-factor authentication' link.
- \* 4. Select Lynne Robbins.
- \* 5. In the right navigation pane, select the 'Enable' link to enable MFA for the account.
- \* 6. Confirm the setting by clicking the 'Enable multi-factor authentication' button.
- \* 7. Click the Close button to close the confirmation window.

**NEW QUESTION 25**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.  
To enter your password, place your cursor in the Enter password box and click on the password below.  
Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d  
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.  
The following information is for technical support purposes only:  
Lab Instance: 10887751

A user named Johanna Lorenz recently left the company. A new employee named Ben Smith will handle the tasks of Johanna Lorenz.  
You

need to create a user named Ben Smith. Ben Smith must be able to sign in to <http://myapps.microsoft.com> and open Microsoft Word Online.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to create a user account and assign a license to the account. You then To create the user account and mailbox:

- > In the Microsoft 365 admin center, go to User management, and select Add user.
- >

Enter the name Ben Smith in the First Name and Last Name fields.

- Enter Ben.Smith in the username field and click Next.
- Assign a Microsoft 365 license to the account.
- Click Next.
- Click Next again.
- Click 'Finish adding'.

#### NEW QUESTION 28

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain.

Your company has a security policy that prevents additional software from being installed on domain controllers.

You need to monitor a domain controller by using Microsoft Azure Advanced Threat Protection (ATP). What should you do? More than once choice may achieve the goal. Select the BEST answer.

- A. Deploy an Azure ATP standalone sensor, and then configure port mirroring.
- B. Deploy an Azure ATP standalone sensor, and then configure detections.
- C. Deploy an Azure ATP sensor, and then configure detections.
- D. Deploy an Azure ATP sensor, and then configure port mirroring.

**Answer:** C

#### Explanation:

If you're installing on a domain controller, you don't need a standalone ATP sensor. You need to configure the detections to detect application installations. With an ATP sensor (non-standalone), you don't need to configure port mirroring.

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/install-atp-step5> <https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-capacity-planning#choosing-the-right-sen>

#### NEW QUESTION 29

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant. Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD. Solution: You run idfix.exe and report the 10 user accounts.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

#### Explanation:

The question states that "all the user account synchronizations completed successfully". If there were problems with the 10 accounts that needed fixing with idfix.exe, there would have been synchronization errors in Azure AD Connect Health.

It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule. Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

#### NEW QUESTION 31

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain. The domain contains 2,000 computers that run Windows 10.

You purchase a Microsoft 365 subscription.

You implement password hash synchronization and Azure Active Directory (Azure AD) Seamless Single Sign-On (Seamless SSO).

You need to ensure that users can use Seamless SSO from the Windows 10 computers. What should you do?

- A. Create a conditional access policy in Azure AD.
- B. Deploy an Azure AD Connect staging server.
- C. Join the computers to Azure AD.
- D. Modify the Intranet zone settings by using Group Policy

**Answer:** D

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sso-quick-start>

#### NEW QUESTION 34

- (Exam Topic 5)

You plan to create a single-tenant console app that will use the Microsoft identity platform.

You need to ensure that the app can use the device code flow to access Microsoft Graph and read email on behalf of the authenticated user.

Which three actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Set Supported account types to Accounts In this organizational directory only
- B. Generate a client secret for the app

- C. Set Supported account types to Accounts in any organizational directory
- D. Enable the Default client type option.
- E. Add redirect URIs.
- F. From the Expose an API settings, create a custom scope.

Answer: BCE

NEW QUESTION 38

- (Exam Topic 5)

You are developing an app that will query the tenant for the names of all the Microsoft Teams teams in the organization. What permission will the app require? Your solution must follow the principle of least privilege.

- A. Grou
- B. Rea
- C. All
- D. Directory.Read.All
- E. Channel.ReadBasic.All
- F. TeamSettings.Read.All

Answer: D

NEW QUESTION 40

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain. The domain contains the users shown in the following table.

Name	Country	Organizational unit (OU)
User1	United States	OU1
User2	Canada	OU1
User3	United States	OU2

You have a Microsoft 365 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com. You configure Azure AD Connect to sync the on-premises domain to contoso.com as shown in the following exhibit.

Answer Area

Statements	Yes	No
User1 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
User1 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 45

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- \* Users must be able to authenticate during business hours only.
- \* Authentication requests must be processed successfully if a single server fails.

\* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.  
\* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.  
Solution: You design an authentication strategy that contains a pass-through authentication model. The solution contains two servers that have an Authentication Agent installed and password hash synchronization configured.  
Does this meet the goal?

A. Yes  
B. No

**Answer: B**

**Explanation:**

This solution meets the following goals:

- Users must be able to authenticate during business hours only.
- Authentication requests must be processed successfully if a single server fails.
- When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

However, the following goal is not met:

- Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

You would need to configure Single-sign on (SSO) to meet the last requirement. Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

**NEW QUESTION 50**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:

- Password Hash Sync: Enabled
- Password writeback: Enabled
- Group writeback: Enabled

You need to add User2 to Group 2.

Solution: You use the Azure Active Directory admin center.

Does this meet the goal?

A. Yes  
B. No

**Answer: A**

**NEW QUESTION 51**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- \* Users must be able to authenticate during business hours only.
- \* Authentication requests must be processed successfully if a single server fails.
- \* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- \* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.

Does this meet the goal?

A. Yes  
B. No

**Answer: B**

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

**NEW QUESTION 54**

- (Exam Topic 5)

Your company has three main offices and one branch office. The branch office is used for research. The company plans to implement a Microsoft 365 tenant and to deploy multi-factor authentication.

You need to recommend a Microsoft 365 solution to ensure that multi-factor authentication is enforced only for users in the branch office.

What should you include in the recommendation?

- A. Microsoft Azure Active Directory (Azure AD) conditional access.
- B. Microsoft Azure Active Directory (Azure AD) password protection.
- C. a device compliance policy
- D. a Microsoft Intune device configuration profile

**Answer:** A

**Explanation:**

With Azure Active Directory (Azure AD) Conditional Access, you can control how authorized users can access your cloud apps. The location condition of a Conditional Access policy enables you to tie access controls settings to the network locations of your users.

For this question, we need to configure a location condition in a conditional access policy and apply the policy to users in that location (the branch office). The conditional access policy can be required to 'Allow Access' but 'Required MFA'.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>

**NEW QUESTION 58**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

Your company has a web application named App1.

The company plans to publish App1 by using a URL of <https://app1.contoso.com>. You need to register App1 to your Microsoft Office 365 tenant.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to register App1 in Azure Active Directory.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Azure Active Directory.
- \* 3. Select 'App registrations'.
- \* 4. Click the 'New registration' link.
- \* 5. Enter the name App1.
- \* 6. Click the Register button.
- \* 7. To add the URL to App1, select App1 in the list of registered apps.
- \* 8. In the properties page of App1, select Branding.
- \* 9. Enter the URL <https://app1.contoso.com> in the 'Home page URL' box.
- \* 10. Click Save to save the changes. References:

<https://docs.microsoft.com/en-us/azure/active-directory/develop/quickstart-register-app>

**NEW QUESTION 63**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to invite several guest users to access the resources in your organization.

You need to ensure that only guests who have an email address that uses the @contoso.com suffix can connect to the resources in your Microsoft 365 tenant.

- A. Mastered

B. Not Mastered

Answer: A

Explanation:

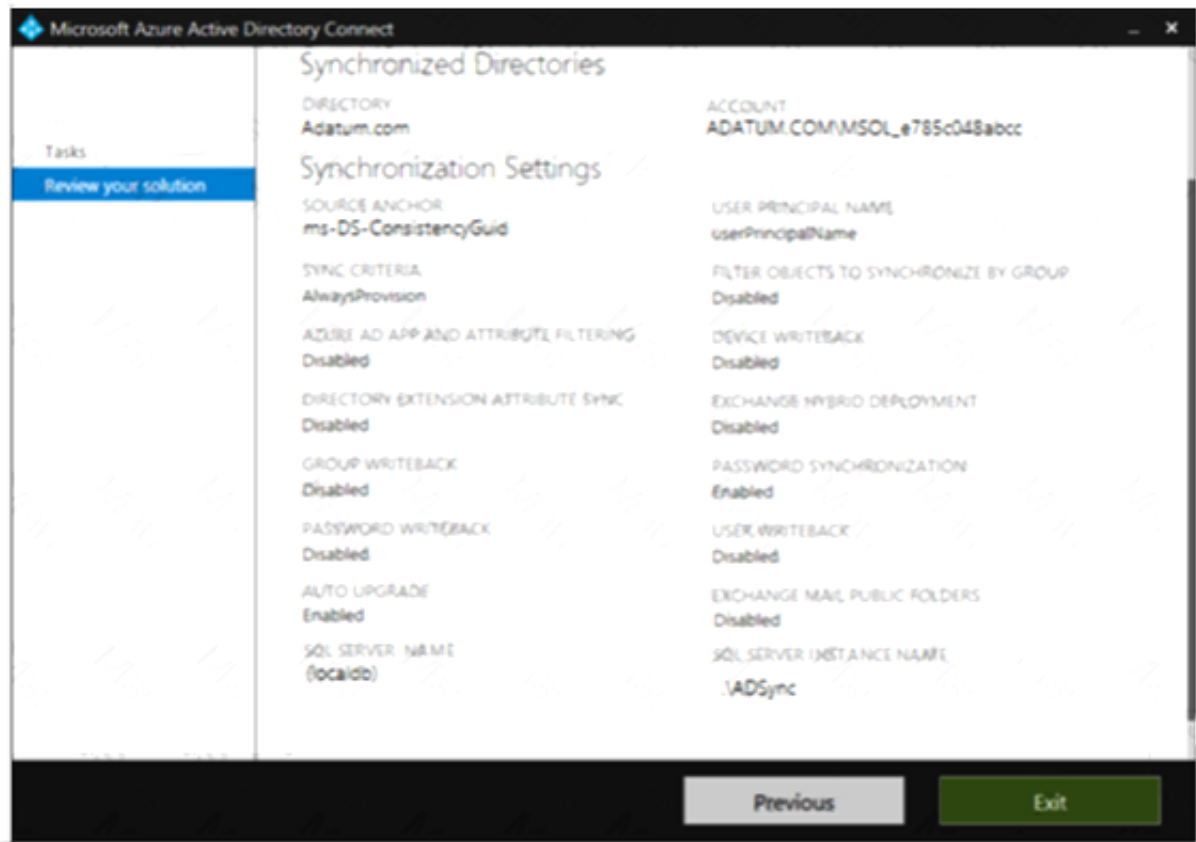

You need to add contoso.com as an allowed domain in the 'External collaboration settings'.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Users then select 'User settings'.
- \* 3. Under External Users, select the 'Manage external collaboration settings'.
- \* 4. Under 'Collaboration restrictions', select the 'Allow invitations only to the specified domains (most restrictive)' option.
- \* 5. Under, Target Domains, type in the domain name 'contoso.com'
- \* 6. Click the Save button at the top of the screen to save your changes. References: <https://docs.microsoft.com/en-us/azure/active-directory/b2b/allow-deny-list>

NEW QUESTION 67

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD) as shown in the following exhibit.

An on-premises Active Directory user account named Allan Yoo is synchronized to Azure AD. You view Allan's account from Microsoft 365 and notice that his username is set to Allan@contoso.onmicrosoft.com.  
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
From the Azure portal, you can reset the password of Allan Yoo.	<input type="radio"/>	<input type="radio"/>
From the Azure portal, you can configure the job title of Allan Yoo.	<input type="radio"/>	<input type="radio"/>
From the Azure portal, you can configure the usage location of Allan Yoo.	<input type="radio"/>	<input type="radio"/>

- A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Allan Yoo's user account is synchronized from the on-premise Active Directory. This means that most user account settings have to be configured in the on-premise Active Directory.  
In the exhibit, Password Writeback is disabled. Therefore, you cannot reset the password of Allan Yoo from the Azure portal.  
You also cannot change Allan Yoo's job title in the Azure portal because his account is synchronized from the on-premise Active Directory.  
One setting that you can configure for synchronized user accounts is the usage location. The usage location must be configured on a user account before you can assign licenses to the user.  
Reference: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-writeback>

NEW QUESTION 72

- (Exam Topic 5)

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD). Currently, App1 can read user profile information. You need to allow App1 to read the user's calendar.  
Solution: Add `https://graph.windows.net/user,` read to the list of scopes during the initial login request Does this meet the goal?

- A. Yes  
B. No

Answer: B

#### NEW QUESTION 76

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future.

Solution: From the Security & Compliance admin center, you create a threat management policy. Does this meet the goal?

A. Yes

B. No

Answer: A

#### Explanation:

We can create a threat management policy to alert us when the sharing policy is changed.

Create a new Alert policy > under Category select Threat Management > under 'Activity is' scroll down to the 'Site administration activities' and select 'Changed a sharing policy'.

#### NEW QUESTION 78

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure Directory (Azure AD) tenant named Contoso.com. The tenant contains the users shown in the following table.

Name	Role
User1	Exchange administrator
User2	User administrator
User3	Global administrator
User4	None

You add another user named user5 to the User administrator role. You need to identify which management tasks User5 can perform.

Which two tasks should you identify? Each correct answer presents a complete solution.

A. Reset the password of any user in Azure AD.

B. Delete any user in Azure AD.

C. Reset the password of User2 and User4 only.

D. Reset the password of User4 only.

E. Delete User1, User2, and User4 only.

F. Delete User2 and User4 only.

Answer: CF

#### Explanation:

Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below).

Only on users who are non-admins or in any of the following limited admin roles:

- > Directory Readers
- > Guest Inviter
- > Helpdesk Administrator
- > Message Center Reader
- > Reports Reader
- > User Administrator Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles#availab>

#### NEW QUESTION 82

- (Exam Topic 5)

Your company has a Microsoft 365 subscription that contains the following domains: Contoso.onmicrosoft.com

Contoso.com

You plan to add the following domains to Microsoft 365 and to use them with Exchange Online:

- > Sub1.contoso.onmicrosoft.com
- > Sub2.contoso.com
- > Fabrikam.com

You need to identify the minimum number of DNS records that must be added for Exchange Online to receive inbound email messages for the three domains.

How many DNS records should you add? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

MX records:

	▼
0	
1	
2	
3	

CNAME records:

	▼
0	
1	
2	
3	

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: 2

You don't need to verify Sub1.contoso.onmicrosoft.com because the onmicrosoft.com domain and DNS is managed by Microsoft. You also don't need to configure an MX record for Sub1.contoso.onmicrosoft.com because that will be done by Microsoft.

For sub2.contoso.com, you don't need to verify the domain because you have already verified its parent domain contoso.com. However, you do need an MX record to direct email for that domain to Exchange Online.

For Fabrikam.com, you will need to verify the domain. You will need an MX record to direct email for that domain to Exchange Online.

Box 2: 0

You 'should' create CNAME records for autodiscover to point your email clients to Exchange Online to connect to the mailboxes. However, you don't have to. You could configure the email client manually. Therefore, the minimum number of CNAME records required is zero.

**NEW QUESTION 83**

- (Exam Topic 5)

In Microsoft 365, you configure a data loss prevention (DLP) policy named Policy1. Policy1 detects the sharing of United States (US) bank account numbers in email messages and attachments.

Policy1 is configured as shown in the exhibit. (Click the Exhibit tab.)

Use actions to protect content when the conditions are met.

**Restrict access or encrypt the content**

☒ Block people from sharing and restrict access to shared content

By default, users are blocked from sending email messages to people. You can choose who has access to shared SharePoint and OneDrive content.

Block these people from accessing SharePoint and OneDrive content

☐ Everyone. Only the content owner, the lastmodifier, and the site admin will continue to have access.

☒ Only people outside your organization. People inside your organization will continue to have access.

☐ Encrypt email messages (applies only to content to Exchange)

You need to ensure that internal users can email documents that contain US bank account numbers to external users who have an email suffix of contoso.com. What should you configure?

- A. an action
- B. a group
- C. a condition
- D. an exception

**Answer:** D

**Explanation:**

You need to add an exception. In the Advanced Settings of the DLP policy, you can add a rule to configure the Conditions and Actions. There is also an 'Add Exception' button. This gives you several options that you can select as the exception. One of the options is 'except when recipient domain is'. You need to select that option and enter the domain name contoso.com.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies#how-dlp-policies>

**NEW QUESTION 87**

- (Exam Topic 5)

Your network contains an Active Directory domain and a Microsoft Azure Active Directory (Azure AD) tenant. The network uses a firewall that contains a list of allowed outbound domains. You began to implement directory synchronization. You discover that the firewall configuration contains only the following domain names in the list of allowed domains:

- \*.microsof.com
- \*.office.com

Directory synchronization fails.

You need to ensure that directory synchronization completes successfully.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From the firewall, allow the IP address range of the Azure data center for outbound communication.
- B. From Azure AD Connect, modify the Customize synchronization options task
- C. Deploy an Azure AD Connect sync server in staging mode.
- D. From the firewall, create a list of allowed inbound domains.
- E. From the firewall, modify the list of allowed outbound domains.

**Answer:** E

**Explanation:**

Azure AD Connect needs to be able to connect to various Microsoft domains such as login.microsoftonline.com. Therefore, you need to modify the list of allowed outbound domains on the firewall.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/reference-connect-ports>

**NEW QUESTION 91**

- (Exam Topic 5)

Your company has a sales system that emails an alert to all the members of the sales department when a new sale is made.

You need to ensure that a notification is posted to a team channel when a new sale is made. The solution must minimize development effort.

Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Post XML to the webhook URL from the existing sales system.
- B. Set the configurationUrl property of a connector in the manifest
- C. Get an incoming webhook for the channel
- D. Post JSON to the webhook URL from the existing sales system.

**Answer:** AC

**NEW QUESTION 95**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

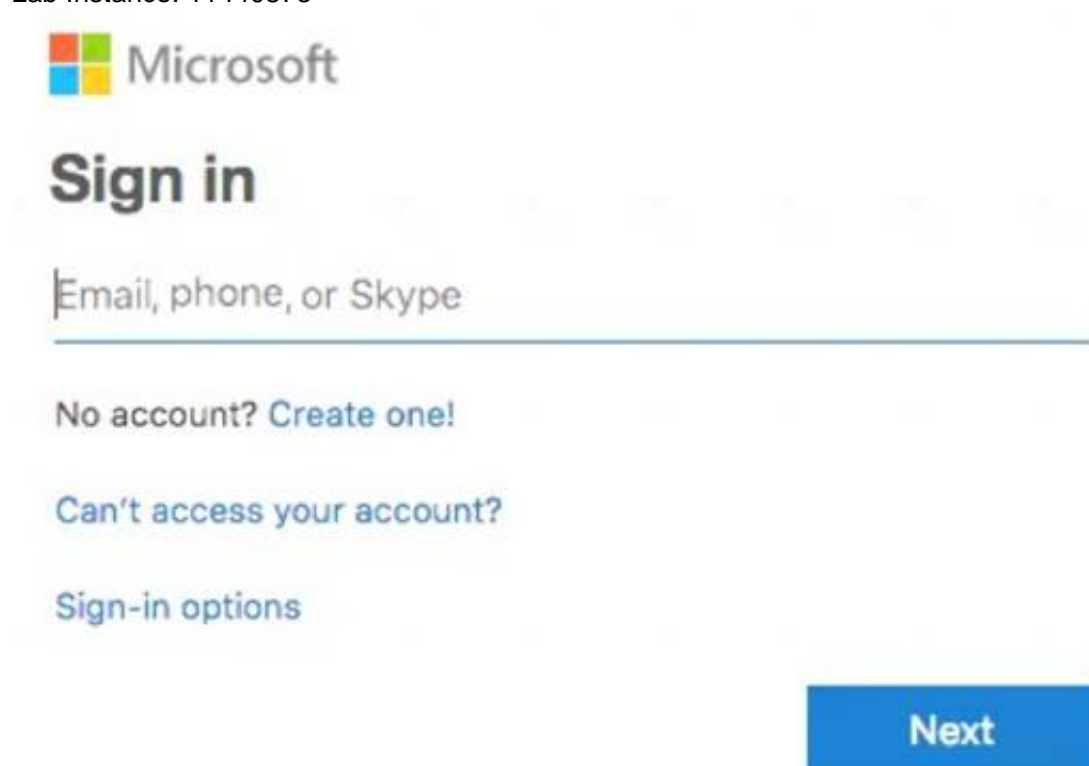

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

You need to prevent all the users in your organization from sending an out of office reply to external users.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to modify the default remote domain. When you add a remote domain, you specify the domain name and the settings apply to that domain. The default remote domain applies to all other domains. Therefore, we need to disable Out of Office replies for external users in the settings of the default remote domain.

- \* 1. Go to the Exchange Admin Center.
- \* 2. Click Mail Flow in the left navigation pane.
- \* 3. Click on Remote Domains.
- \* 4. Select the default remote domain and click the Edit icon (pencil icon).
- \* 5. In the 'Out of Office automatic reply types' section, select 'None'.
- \* 6. Click Save to save to changes to the default remote domain.

**NEW QUESTION 98**

- (Exam Topic 5)

Your network contains three Active Directory forests.

You create a Microsoft Azure Active Directory (Azure AD) tenant. You plan to sync the on premises Active Directory (Azure AD).

You need to recommend a synchronization solution. The solution must ensure that the synchronization can complete successfully and as quickly as possible if a single server fails.

What should you include in the recommendation?

- A. Three Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode
- B. One Azure AD Connect sync servers one Azure AD Connect sync servers in staging mode
- C. Three Azure AD Connect sync servers and one Azure AD Connect sync servers in staging mode
- D. six Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode

**Answer:** B

**Explanation:**

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom>

**NEW QUESTION 99**

- (Exam Topic 5)

Your company has on-premises servers and a Microsoft Azure Active Directory (Azure AD) tenant. Several months ago, the Azure AD Connect Health agent was installed on all the servers.

You review the health status of all the servers regularly.

Recently, you attempted to view the health status of a server named Server1 and discovered that the server is NOT listed on the Azure Active Directory Connect Servers list.

You suspect that another administrator removed Server1 from the list. You need to ensure that you can view the health status of Server1.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. From Windows PowerShell, run the Register-AzureADConnectHealthSyncAgent cmdlet.
- B. From Azure Cloud shell, run the Connect-AzureAD cmdlet.
- C. From Server1, change the Azure AD Connect Health services Startup type to Automatic (Delayed Start).
- D. From Server1, change the Azure AD Connect Health services Startup type to Automatic.
- E. From Server1, reinstall the Azure AD Connect Health agent.

**Answer:** AE

**Explanation:**

question states that another administrator removed Server1 from the list. To view the health status of Server1, you need to re-register the AD Connect Health Sync Agent. You can do this manually by running the Register-AzureADConnectHealthSyncAgent cmdlet. Alternatively, you can reinstall the Azure AD Connect Health agent. The Azure AD Connect Health agent is registered as part of the installation.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-agent-install>

**NEW QUESTION 101**

- (Exam Topic 5)

You are securing a web API by using the Microsoft identity Platform. The web API must meet the following requirements:

- Authenticated Azure Active Directory (Azure AD) users must be able to retrieve user information from Azure AD.
- Authenticated Azure AD users must be able to manage Microsoft 365 groups.

You need to grant permissions for the web API. The solution must use the principle of least privilege. What should you grant? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as include all the permissions the application needs. [Learn more about permissions and consent](#)

+ Add a permission

Grant admin consent for nuborocks

API / Permissions name	Type	Description
Microsoft Graph (2)		
Directory.AccessAsUser.All Group.Create Group.Read Group.ReadWrite.All	Delegated	Read and write all groups
User.Read User.Read.All User.ReadBasic.All User.ReadWrite.All	Delegated	Read all users' basic profiles

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:  
Answer Area

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as include all the permissions the application needs. [Learn more about permissions and consent](#)

+ Add a permission

Grant admin consent for nuborocks

API / Permissions name	Type	Description
Microsoft Graph (2)		
Directory.AccessAsUser.All Group.Create Group.Read Group.ReadWrite.All	Delegated	Read and write all groups
User.Read User.Read.All User.ReadBasic.All User.ReadWrite.All	Delegated	Read all users' basic profiles

NEW QUESTION 103

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.

Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.

You need to determine whether a user named User1 is licensed for Exchange Online only. Solution: You run the Get-MsolAccountSku cmdlet.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Get-MsolAccountSku cmdlet returns all the SKUs that the company owns. It does not tell you which licenses are assigned to users.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msolaccountsku?view=azureadps-1.0>

NEW QUESTION 105

- (Exam Topic 5)

Your network contains an Active Directory forest named adatum.local. The forest contains 500 users and uses adatum.com as a UPN suffix. You deploy a Microsoft 365 tenant. You implement directory synchronization and sync only 50 support users. You discover that five of the synchronized users have usernames that use a UPN suffix of onmicrosoft.com. You need to ensure that all synchronized identities retain the UPN set in their on-premises user account. What should you do?

A. From the Microsoft 365 admin center, add adatum.com as a custom domain name.  
B. From Windows PowerShell, run the Set-ADDomain –AllowedDNSSuffixes adatum.com command.  
C. From Active Directory Users and Computers, modify the UPN suffix of the five user accounts.  
D. From the Microsoft 365 admin center, add adatum.local as a custom domain name.

Answer: C

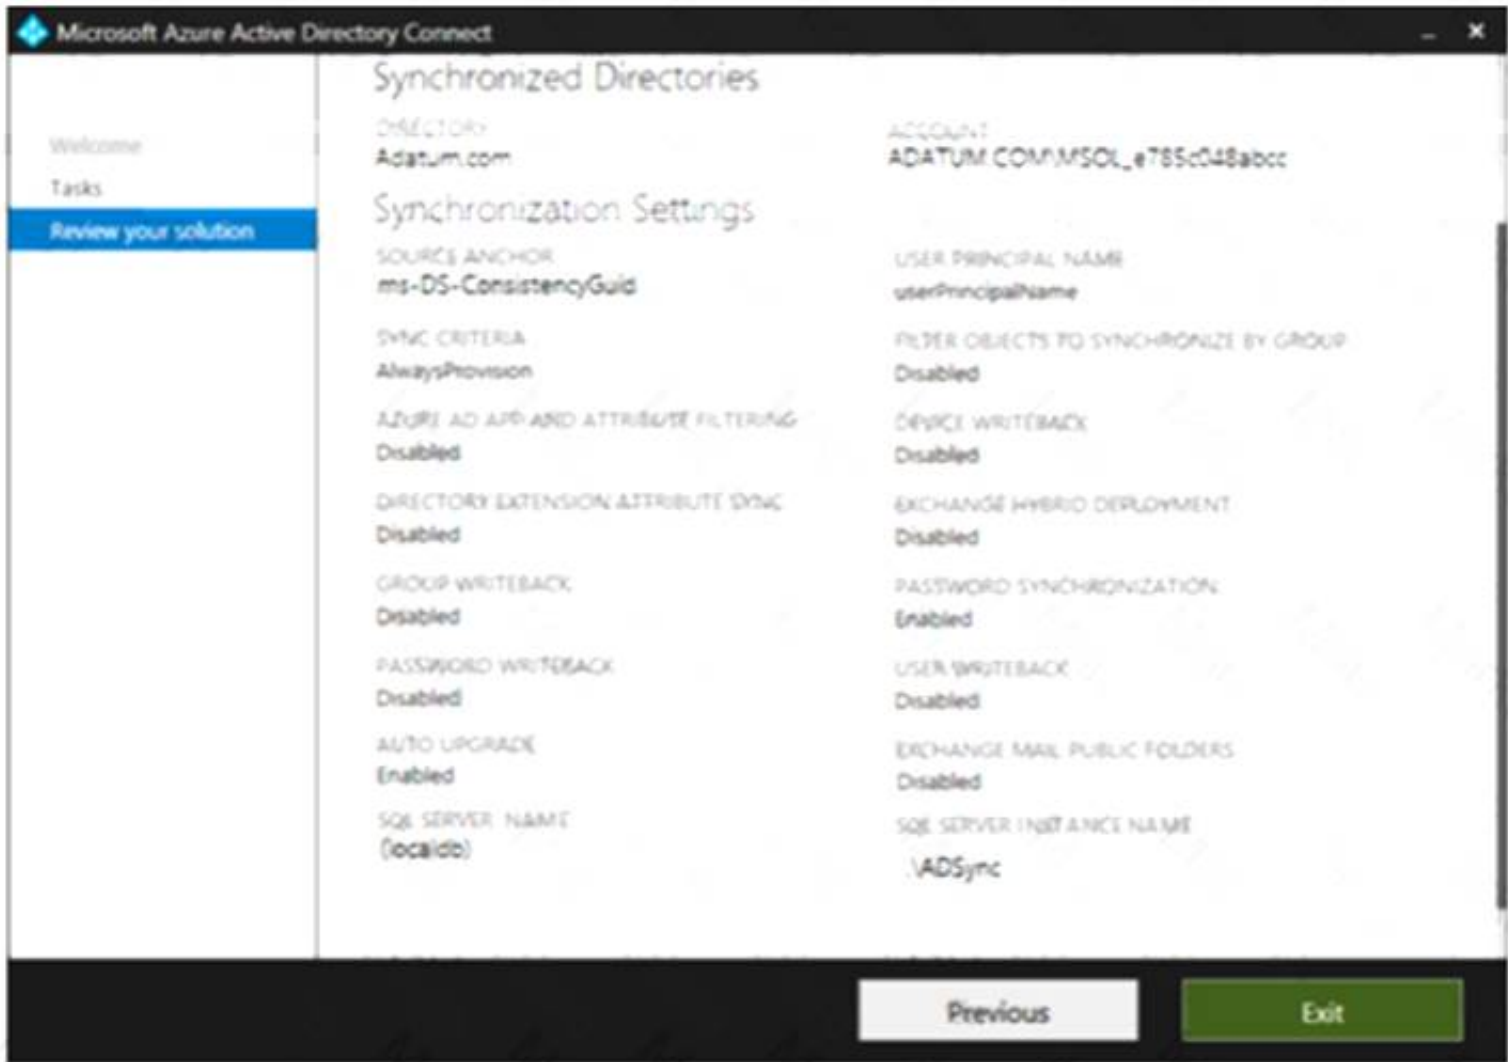

Explanation:

The question states that only five of the synchronized users have usernames that use a UPN suffix of onmicrosoft.com. Therefore the other 45 users have the correct UPN suffix. This tells us that the adatum.com domain has already been added to Office 365 as a custom domain. The forest is named adatum.local and uses adatum.com as a UPN suffix. User accounts in the domain will have adatum.local as their default UPN suffix. To use adatum.com as the UPN suffix, each user account will need to be configured to use adatum.com as the UPN suffix. Any synchronized user account that has adatum.local as a UPN suffix will be configured to use a UPN suffix of onmicrosoft.com because adatum.local cannot be added to Office 365 as a custom domain. Therefore, the reason that the five synchronized users have usernames with a UPN suffix of onmicrosoft.com is because their accounts were not configured to use the UPN suffix of contoso.com. Reference: <https://docs.microsoft.com/en-us/office365/enterprise/prepare-a-non-routable-domain-for-directory-synchroniza>

NEW QUESTION 107

- (Exam Topic 5)

Your company has a hybrid deployment of Microsoft 365. An on-premises user named User1 is synced to Microsoft Azure Active Directory (Azure AD). Azure AD Connect is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

User1 [answer choice].

cannot change her password from any Microsoft portals  
can change her password by using self-service password reset feature only  
an change her password from the Office 365 admin center only

If the password for User1 is changed in Active Directory, [answer choice].

the password will be synchronized to Azure AD  
a new randomly generated password will be assigned to User1  
the password in Azure AD will be unchanged

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

User1 cannot change her password from any Microsoft portals because Password Writeback is disabled in the Azure AD Connect configuration.

If the password for User1 is changed in Active Directory, the password will be synchronized to Azure AD because Password Synchronization is enabled in the Azure AD Connect configuration.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom>

**NEW QUESTION 108**

- (Exam Topic 5)

Your company has an on-premises Microsoft SharePoint Server environment and a Microsoft 365 subscription.

When users search for content from Microsoft 365, you plan to include content from the on-premises SharePoint Server environment in the results.

You need to add crawled metadata from the on-premises SharePoint Server content to the Microsoft Office 365 search index.

What should you do first?

- A. Run the SharePoint Hybrid Configuration Wizard.
- B. Create a site collection that uses the Basic Search Center template.
- C. Run the SharePoint Migration Tool.
- D. Create a site collection that uses the Enterprise Search Center template.

**Answer:** A

**NEW QUESTION 113**

- (Exam Topic 5)

You plan to develop a SharePoint Framework (SPfx) web part by using the ReactJS framework.

You need to ensure that all the web part fields and controls adopt the theme of the site when you deploy the web part. The solution must minimize development effort

What should you include in the solution?

- A. Material-UI
- B. FluentUI
- C. Microsoft Fluid Framework
- D. HTML5 and CSS

**Answer:** B

**NEW QUESTION 118**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription that uses Microsoft Intune.

You need to access service health alerts from a mobile phone. What should you use?

- A. the Microsoft Authenticator app
- B. the Intune app
- C. the Microsoft 365 Admin mobile app
- D. Intune Company Portal

**Answer:** A

**NEW QUESTION 122**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

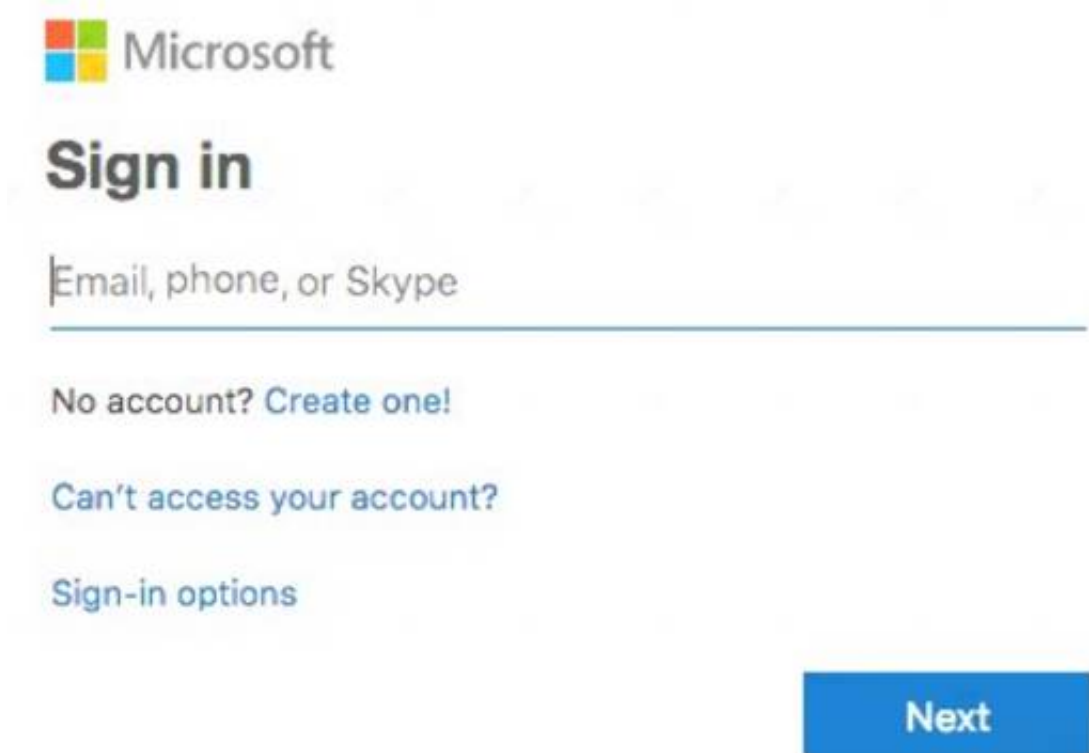

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

You need to create a policy that allows a user named Lee Gu to use Outlook Web App to review 50 percent of the outbound email messages sent by a user named Joni Sherman.  
 To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to configure a Supervision Policy.

- \* 1. Go to <https://protection.office.com> or navigate to the Security & Compliance admin center.
- \* 2. In the left navigation pane, select Supervision.
- \* 3. Click the '+Create' button to create a new supervision policy.
- \* 4. Give the policy a name such as 'Joni Sherman' and click Next.
- \* 5. In the 'Supervised users' section, click '+Add users or groups'.
- \* 6. Select Joni Sherman from the users list and click the Add button.
- \* 7. Deselect the 'Teams chats' and 'Skype for Business Conversations' checkboxes leaving only the 'Exchange Email' checkbox ticked and click Next.
- \* 8. Under 'Direction is', deselect Inbound leaving only Outbound selected and click Next.
- \* 9. In the 'Percentage to review' section, enter 50 and click Next.
- \* 10. In the 'Reviewers' section, start typing Lee Gu then select his account when it appears.
- \* 11. Click Next.
- \* 12. On the 'Review your settings' page, check the settings are correct then click the Finish button to create the policy.

**NEW QUESTION 123**

- (Exam Topic 5)

You plan to deploy Microsoft Teams to 2,500 users.

You need to estimate the internet bandwidth required for the deployment. What should you use?

- A. Advisor for Teams
- B. Network planner
- C. Skype for Business Server Remote Connectivity Test
- D. Microsoft Remote Connectivity Analyzer

**Answer:** B

**Explanation:**

From: <https://docs.microsoft.com/en-us/microsoftteams/network-planner>

Network Planner is a new tool that is available in the Teams admin center. It can be found by going to Planning > Network planner. In just a few steps, the Network Planner can help you determine and organize network requirements for connecting Microsoft Teams users across your organization. When you provide your network details and Teams usage, the Network Planner calculates your network requirements for deploying Teams and cloud voice across your organization's physical locations.

**NEW QUESTION 125**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain that syncs to Azure Active Directory (Azure AD).

The on-premises network contains a Microsoft SharePoint Server 2019 farm. The company purchases a Microsoft 365 subscription.

You have the users shown in the following table

Name	Source
User1	Windows Active Directory
User2	Azure Active Directory

You plan to assign User1 and User2 the required roles to run the SharePoint Hybrid Configuration Wizard. User1 will be used for on-premises credentials and User2 will be used for cloud credentials.

You need to assign the correct role to User2. The solution must use the principle of least privilege. Which role should you assign to User2?

- A. Application administrator
- B. SharePoint farm administrator
- C. Global administrator
- D. SharePoint administrator

Answer: C

Explanation:

To run the SharePoint Hybrid Configuration Wizard, you need to provide credentials of a user (in this case User2) of a Global Administrator account in Azure Active Directory.

Reference:

<https://www.c-sharpcorner.com/article/sharepoint-2019-enable-hybrid-experience/> <https://docs.microsoft.com/en-us/sharepoint/hybrid/accounts-needed-for-hybrid-configuration-and-testing>

NEW QUESTION 126

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You view the service advisories shown in the following exhibit.

Home > Service health

Some services have posted advisories

2018-10-05 08:43(UTC) View history

All services

Incidents

Advisories

	Office 365 Portal	1 advisory
	SharePoint Online	1 advisory
	Office Subscription	Service is healthy
	Microsoft Intune	Service is healthy
	Microsoft StaffHub	Service is healthy
	Microsoft Teams	Service is healthy
	Mobile Device Management for Office 365	Service is healthy
	Azure Information Protection	Service is healthy
	Exchange Online	Service is healthy

You need to ensure that users who administer Microsoft SharePoint Online can view the advisories to investigate health issues. Which role should you assign to the users?

- A. SharePoint administrator
- B. Message Center reader
- C. Reports reader
- D. Service administrator

Answer: D

Explanation:

People who are assigned the global admin or service administrator role can view service health. To allow Exchange, SharePoint, and Skype for Business admins to view service health, they must also be assigned the Service admin role. For more information about roles that can view service health.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/view-service-health>

NEW QUESTION 128

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains 300 users.

The users have Domestic and International Calling Plan licenses.

What is the maximum user phone numbers and toll-free service phone numbers can you acquire? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Number of user phone numbers:

▼
150
300
340
600

Number of toll-free service phone numbers:

▼
20
30
45
65

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

Graphical user interface, text, application, email Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/how-many-phone-numbers-can-you-get>

**NEW QUESTION 130**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You need to implement Windows Defender Advanced Threat Protection (ATP) for all the supported devices enrolled devices enrolled on mobile device management (MDM).

What should you include in the device configuration profile? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Platform:

▼
Android
iOS
Windows 10 and later
Windows 8.1 and later

Settings:

▼
Offboard package
Onboard package
Windows Defender Applicaion Guard
Windows Defender Firewall

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

You can integrate Microsoft Defender Advanced Threat Protection (Microsoft Defender ATP) with Microsoft Intune as a Mobile Threat Defense solution. Integration can help you prevent security breaches and limit the impact of breaches within an organization. Microsoft Defender ATP works with devices that run Windows 10 or later.

When you establish a connection from Intune to Microsoft Defender ATP, Intune receives a Microsoft Defender ATP onboarding configuration package from Microsoft Defender ATP. This package is deployed to devices by using a device configuration profile.

Reference:

<https://docs.microsoft.com/en-us/intune/advanced-threat-protection>

**NEW QUESTION 132**

- (Exam Topic 5)

You publish an enterprise application named App1 that process financial data.

You need to ensure that access to App1 is revoked for users who no longer require view the processed financial data.

What should you configure?

- A. An access review  
B. An app protection policy  
C. A conditional access policy  
D. An owner

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

**NEW QUESTION 135**

- (Exam Topic 5)

Your company has offices in several cities and 100.000 users. The network contains an Active Directory domain contoso.com.

You purchase Microsoft 365 and plan to deploy several Microsoft 365 services.

You are evaluating the implementation of pass-through authentication and seamless SSO. Azure AD Connect will NOT be in staging mode.

You need to identify the redundancy limits for the planned implementation.

What should you identify? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Maximum number of servers on which you can run  
Azure AD Connect:

▼
1
2
4
6
11

Maximum number of servers on which you can run  
standalone Authentication Agents:

▼
1
2
4
6
11

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Azure authentication agents can be installed on as many servers as you like. Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-quick-start>

**NEW QUESTION 136**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.

Solution: From the Azure Active Directory admin center, you create a trusted location and a conditional access policy.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access. References:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition> <https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlinea>

**NEW QUESTION 138**

- (Exam Topic 5)

Your company has a Microsoft 365 E3 subscription.

All devices run Windows 10 Pro and are joined to Microsoft Azure Active Directory (Azure AD).

You need to change the edition of Windows 10 to Enterprise the next time users sign in to their computer. The solution must minimize downtime for the users.

What should you use?

- A. Subscription Activation
- B. Windows Update
- C. Windows Autopilot
- D. an in-place upgrade

**Answer:** C

**Explanation:**

When initially deploying new Windows devices, Windows Autopilot leverages the OEM-optimized version of Windows 10 that is preinstalled on the device, saving organizations the effort of having to maintain custom images and drivers for every model of device being used. Instead of re-imaging the device, your existing Windows 10 installation can be transformed into a “business-ready” state, applying settings and policies, installing apps, and even changing the edition of Windows 10 being used (e.g. from Windows 10 Pro to Windows 10 Enterprise) to support advanced features.

Reference:

<https://docs.microsoft.com/en-us/windows/deployment/windows-autopilot/windows-autopilot>

**NEW QUESTION 143**

- (Exam Topic 5)

Your company has a Microsoft 365 subscription that contains the users shown in the following table.

Name	Role
User1	Global administrator
User2	Security administrator, Guest inviter
User3	None
User4	Password administrator

You need to identify which users can perform the following administrative tasks:

- > Modify the password protection policy.
- > Create guest user accounts.

Which users should you identify for each task? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Modify the password protection policy:

User1 only

User1 and User2 only

User1, User2, and User4 only

User1, User2, User3, and User4

Create new guest users in Microsoft Azure Active Directory (Azure AD):

User1 only

User1 and User2 only

User1, User2, and User4 only

User1, User2, User3, and User4

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

Only a Global Admin can modify the password protection policy.

A Global Admin or a user with the Guest Inviter role can create guest accounts. Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises-op>

**NEW QUESTION 144**

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.

A temporary employee at your company uses an email address of user1@outlook.com.

You need to ensure that the temporary employee can sign in to contoso.com by using the user1@outlook.com account.

What should you do?

- A. From the Azure Active Directory admin center, create a new user.  
B. From the Microsoft 365 admin center, create a new contact.  
C. From the Azure Active Directory admin center, create a new guest user.  
D. From the Microsoft 365 admin center, create a new user.

**Answer:** C

**Explanation:**

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

**NEW QUESTION 149**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

From the Security & Compliance admin center, you create a content search of all the mailboxes that contain the word ProjectX.

You need to export the results of the content search. What do you need to download the report?

- A. an export key
- B. a password
- C. a user certificate
- D. a certification authority (CA) certificate

**Answer:** A

**Explanation:**

When you export a report, the data is temporarily stored in a unique Azure Storage area in the Microsoft cloud before it's downloaded to your local computer. To download the report from the Azure Storage Area, you need an export key. Reference:  
<https://docs.microsoft.com/en-us/microsoft-365/compliance/export-a-content-search-report>

**NEW QUESTION 152**

- (Exam Topic 5)

Your company has a hybrid deployment of Microsoft 365.

Users authenticate by using pass-through authentication. Several Microsoft Azure AD Connect Authentication Agents are deployed.

You need to verify whether all the Authentication Agents are used for authentication. What should you do?

- A. From the Azure portal, use the Troubleshoot option on the Pass-through authentication page.
- B. From Performance Monitor, use the #PTA authentications counter.
- C. From the Azure portal use the Diagnostics settings on the Monitor blade.
- D. From Performance Monitor, use the Kerberos authentications counter.

**Answer:** A

**Explanation:**

On the Troubleshoot page, you can view how many agents are configured. If you click on the agents link, you can view the status of each agent. Each agent will have a status of Active or Inactive.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/tshoot-connect-pass-through-authentication>

**NEW QUESTION 153**

- (Exam Topic 5)

You have a Microsoft 365 subscription and a DNS domain. The domain is hosted by a third-party DNS service.

You plan to add the domain to the subscription.

You need to use Microsoft Exchange Online to send and receive emails for the domain.

Which type of DNS record should you add to the DNS zone of the domain for each task? To answer, drag the appropriate records to the correct tasks. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer Area**

Route email for the domain to Exchange Online

Enable Microsoft Outlook to auto discover the Exchange Online server for the domain.

Help prevent spam for the domain.

A

CNAME

MX

SRV

TXT

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: MX

When you update your domain's MX record, all new email for anyone who uses your domain will now come to Microsoft 365.

Box 2: CNAME

Add CNAME records to connect other service. You can add CNAME records for each service that you want to connect.

Box 3: TXT

Add or edit an SPF TXT record to help prevent email spam Reference:

<https://docs.microsoft.com/en-us/microsoft-365/admin/get-help-with-domains/create-dns-records-at-any-dns-hos>

**NEW QUESTION 158**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription.

You need to ensure that users are prompted for multi-factor authentication (MFA) when they attempt to access Microsoft SharePoint Online resources. Users must NOT be prompted for MFA when they attempt to access other Microsoft 365 services.

What should you do?

- A. From the Microsoft Endpoint Manager admin center, create an app protection policy.
- B. From the multi-factor authentication page, configure the users settings.
- C. From the Azure Active Directory admin center, create a conditional access policy.
- D. From the Cloud App Security admin center, create an app access policy.

**Answer:** C

**Explanation:**

Multi-factor authentication (MFA) is configured through conditional access policies. Reference:  
<https://docs.microsoft.com/en-us/appcenter/general/configuring-aad-conditional-access>

**NEW QUESTION 163**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.

Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.

You need to determine whether a user named User1 is licensed for Exchange Online only. Solution: You run the Get-MsolUser cmdlet.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

The Get-MsolUser cmdlet will tell you if a user is licensed for Microsoft 365 but it does not tell you which licenses are assigned.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0>

**NEW QUESTION 164**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWYjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You plan to provide an external user named fabrikamuser@fabrikam.com with access to several resources in your Microsoft 365 tenant.

You need to ensure that the external user can be added to Office 365 groups.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to create a guest account for the external user.

\* 1. Go to the Azure Active Directory admin center.

\* 2. Select Users.

\* 3. Click the 'New guest user' link.

\* 4. Select the 'Invite user' option.

\* 5. Give the account a name and enter fabrikamuser@fabrikam.com in the email address field.

\* 6. Click the 'Invite' button. References:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/b2b-quickstart-add-guest-users-portal>

**NEW QUESTION 166**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

The following information is for technical support purposes only:

Lab Instance: 10811525

You need to prevent the users in your organization from establishing voice calls from Microsoft Skype for Business to external Skype users.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to configure the External Communications settings in the Skype for Business admin center.

\* 1. You need to go to the Skype for Business admin center. If you see a Skype for Business admin center in the admin center list in the Microsoft portal, open it and skip to step 4.

\* 2. If you don't see a Skype for Business admin center in the admin center list in the Microsoft portal, open the Teams admin center.

\* 3. In the Teams admin center, choose Skype > Legacy Portal.

\* 4. In the Skype for Business admin center, select Organization.

\* 5. Select External communications.

\* 6. Untick the 'Let people use Skype for Business to communicate with Skype users outside your organization' checkbox.

\* 7. Click Save to save the changes.

**NEW QUESTION 170**

- (Exam Topic 5)

You have several Microsoft SharePoint document libraries in your on-premises environment. You have a Microsoft 365 tenant that has directory synchronization implemented.

You plan to move all the document libraries to SharePoint Online.

You need to recommend a migration strategy for the document libraries.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Use the SharePoint Migration Tool to migrate the SharePoint data.

Create new SharePoint sites.

Run azcopy.exe to migrate the SharePoint data.

Create a Microsoft Azure Storage account.

Create new SharePoint libraries.

**Answer Area**

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- > SharePoint Server 2013
- > SharePoint Server 2010
- > Network and local file shares

The first step is to create new SharePoint sites in SharePoint online. These sites will host the document libraries which will host the migrated content.

The second step is to create the document libraries in the SharePoint sites to host the migrated content. The final step is to use the SharePoint Migration Tool to migrate the content.

Reference:

<https://docs.microsoft.com/en-us/sharepointmigration/how-to-use-the-sharepoint-migration-tool>

**NEW QUESTION 172**

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains several Microsoft SharePoint Online sites. You discover that users from your company can invite external users to access files on the SharePoint sites. You need to ensure that the company users can invite only authenticated guest users to the sites. What should you do?

- A. From the Microsoft 365 admin center, configure a partner relationship.
- B. From SharePoint Online Management Shell, run the set-SPOSite cmdlet.
- C. From the Azure Active Directory admin center, configure a conditional access policy.
- D. From the SharePoint admin center, configure the sharing settings.

**Answer:** D

**Explanation:**

You need to set the Sharing settings to 'Existing Guests'. This setting allows sharing only with guests who are already in your directory. These guests may exist in your directory because they previously accepted sharing invitations or because they were manually added.

Reference:

<https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off>

**NEW QUESTION 176**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You configure a data loss prevention (DLP) policy.

You discover that users are incorrectly marking content as false positive and bypassing the DLP policy. You need to prevent the users from bypassing the DLP policy.

What should you configure?

- A. actions
- B. exceptions
- C. incident reports
- D. user overrides

**Answer: D**

**Explanation:**

A DLP policy can be configured to allow users to override a policy tip and report a false positive.

You can educate your users about DLP policies and help them remain compliant without blocking their work. For example, if a user tries to share a document containing sensitive information, a DLP policy can both send them an email notification and show them a policy tip in the context of the document library that allows them to override the policy if they have a business justification. The same policy tips also appear in Outlook on the web, Outlook, Excel, PowerPoint, and Word.

If you find that users are incorrectly marking content as false positive and bypassing the DLP policy, you can configure the policy to not allow user overrides.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies>

**NEW QUESTION 179**

- (Exam Topic 5)

You have a Microsoft 365 subscription and a hybrid Microsoft Exchange Online deployment.

You plan to deploy iOS devices that will use Outlook for iOS and Hybrid Modem Authentication (HMA). You need to ensure that HMA is configured correctly.

What should you use?

- A. Microsoft Diagnostics and Recovery Toolset (DaRT)
- B. Microsoft Remote Connectivity Analyzer
- C. Microsoft Support and Recovery Assistant
- D. Apple Configurator

**Answer: D**

**NEW QUESTION 181**

- (Exam Topic 5)

You have an on premises web application that is published by using a URL of <https://app.contoso.local>. You purchase a Microsoft 365 subscription.

Several external users must be able to connect to the web application

You need to recommend a solution for external access to the application. The solution must support multi-factor authentication.

Which two actions should you recommend? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. From an on-premises server, install a connector, and then publish the app.
- B. From the Azure Active Directory admin center, enable an Application Proxy.
- C. From the Azure Active Directory admin center, create a conditional access policy.
- D. From an on premises server, install an Authentication Agent.
- E. Republish the web-application by using <http://app.contoso.com>

**Answer: AB**

**Explanation:**

Azure Active Directory (Azure AD) has an Application Proxy service that enables users to access on-premises applications by signing in with their Azure AD account. The application proxy enables you to take advantage of Azure AD security features like Conditional Access and Multi-Factor Authentication.

To use Application Proxy, install a connector on each Windows server you're using with the Application Proxy service. The connector is an agent that manages the outbound connection from the on-premises application servers to Application Proxy in Azure AD.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-add-on-premises-applic>

**NEW QUESTION 186**

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains an Azure Active Directory (Azure AD) tenant named contoso.com.

Corporate policy states that user passwords must not include the word Contoso. What should you do to implement the corporate policy?

- A. From the Azure Active Directory admin center, configure the Password protection settings.
- B. From the Microsoft 365 admin center, configure the Password policy settings.
- C. From Azure AD Identity Protection, configure a sign-in risk policy.
- D. From the Azure Active Directory admin center, create a conditional access policy.

**Answer: A**

**Explanation:**

The Password protection settings allows you to specify a banned password list of phrases that users cannot use as part of their passwords.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises> <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-configure> <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad#custombanne>

#### NEW QUESTION 189

- (Exam Topic 5)

Your organization has an on-premises Microsoft Exchange Server 2016 organization. The organization is in the company's main office in Melbourne. The main office has a low-bandwidth connection to the Internet.

The organization contains 250 mailboxes.

You purchase a Microsoft 365 subscription and plan to migrate to Exchange Online next month. In 12 months, you plan to increase the bandwidth available for the Internet connection.

You need to recommend the best migration strategy for the organization. The solution must minimize administrative effort.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. network upload
- B. cutover migration
- C. hybrid migration
- D. staged migration

**Answer:** C

#### Explanation:

With a hybrid migration, you can migrate the mailboxes in small batches over a period of time which will help to avoid saturating the bandwidth. With the migration wizard, you can configure a migration batch to start outside office hours which would minimize bandwidth usage during office hours.

With a hybrid migration, you do not need to reconfigure Outlook to connect to the migrated mailbox. Outlook will automatically detect the new mailbox location.

This reduces administrative effort.

Reference:

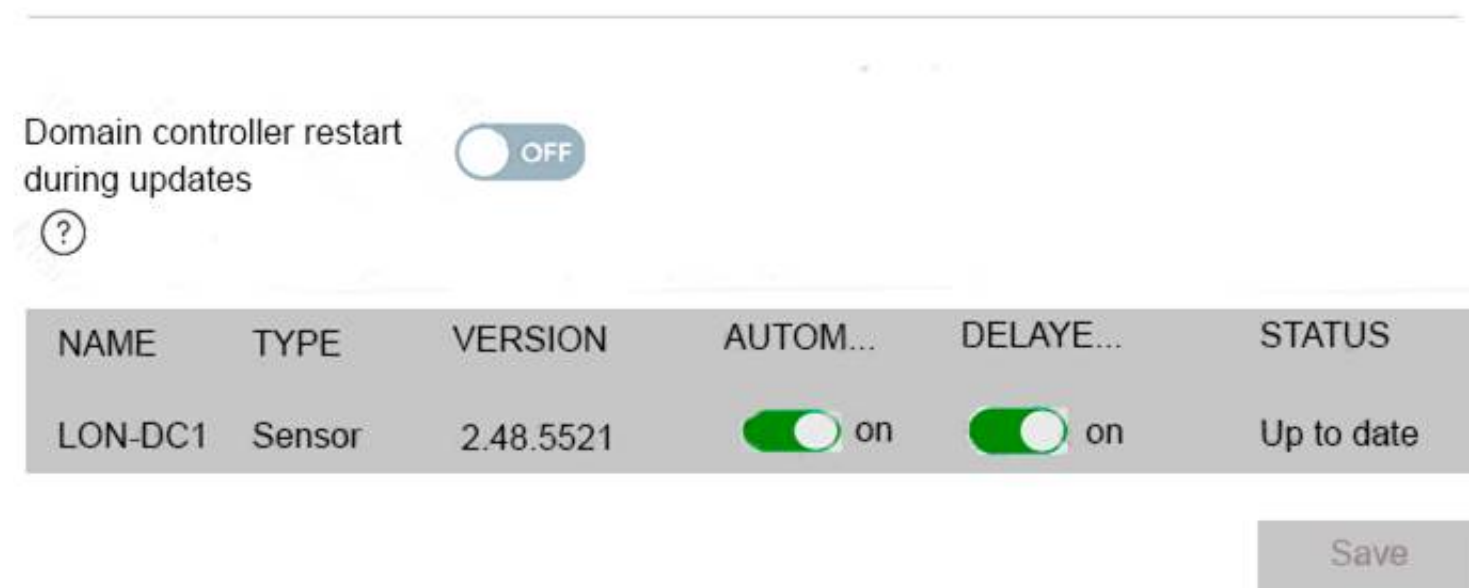

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/mailbox-migration>

#### NEW QUESTION 191

- (Exam Topic 5)

You implement Microsoft Azure Advanced Threat Protection (Azure ATP). You have an Azure ATP sensor configured as shown in the following exhibit. Updates

#### Updates

The screenshot shows the 'Domain controller restart during updates' toggle set to 'OFF'. Below it is a table with the following data:

NAME	TYPE	VERSION	AUTOM...	DELAYE...	STATUS
LON-DC1	Sensor	2.48.5521	<input checked="" type="checkbox"/> on	<input checked="" type="checkbox"/> on	Up to date

At the bottom right of the table is a 'Save' button.

How long after the Azure ATP cloud service is updated will the sensor update?

- A. 1 hour
- B. 7 days
- C. 48 hours
- D. 12 hours
- E. 72 hours

**Answer:** E

#### Explanation:

References:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-whats-new> The exhibit shows that the sensor is configure for Delayed update.

Given the rapid speed of ongoing Azure ATP development and release updates, you may decide to define a subset group of your sensors as a delayed update ring, allowing for a gradual sensor update process. Azure

ATP enables you to choose how your sensors are updated and set each sensor as a Delayed update candidate.

Sensors not selected for delayed update are updated automatically, each time the Azure ATP service is

updated. Sensors set to Delayed update

each service update.

Reference:

are updated on a delay of 72 hours, following the official release of

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/sensor-update>

NEW QUESTION 192

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains a guest user named User1. User1 is assigned the User administrator role. You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com is configured as shown in the following exhibit.

External collaboration settings

Save Discard

Guest users permissions are limited ⓘ

YesNo

Admins and users in the guest inviter role can invite ⓘ

YesNo

Members can invite ⓘ

YesNo

Guests can invite ⓘ

YesNo

Collaboration restrictions

☒ Allow invitations to be sent to any domain (most inclusive)

☐ Deny invitations to the specified domains

☐ Allow invitations only to the specified domains (most restrictive)

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

User1 can [answer choice].

open the Azure portal only

open the Azure portal and view users only

open the Azure portal, view users, and create new guest users only

open the Azure portal, view users, create new users, and create new guest users

All other guest users can [answer choice].

open the Azure portal only

open the Azure portal and view users only

open the Azure portal, view users, and create new guest users only

open the Azure portal, view users, create new users, and create new guest users

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Default permissions for guests are restrictive by default. Guests can be added to administrator roles, which grant them full read and write permissions contained in the role. There is one additional restriction available, the ability for guests to invite other guests. Setting Guests can invite to No prevents guests from inviting other guests. User1 is assigned the User Administrator role. Therefore, User1 can open the Azure portal, view users, create new users, and create new guest users. In the exhibit, the ‘Guest user permissions are limited’ is set to no. This means that guest users have the same permissions as members. However, the ‘Guests can invite’ setting is set to No. Therefore, other guest users (all guest users except User1) can open the Azure portal and view users in the same way as member users can. Reference: <https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations> <https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions>

NEW QUESTION 193

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD). You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch). You configure a pilot for co-management. You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1. You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager. Solution: You add Device1 to an Active Directory group.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager.

To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection, not an Active Directory Group. Therefore, this solution does not meet the requirements.

Reference:

<https://docs.microsoft.com/en-us/configmgr/comanage/how-to-enable>

**NEW QUESTION 194**

- (Exam Topic 5)

Your on-permission network contains the web application shown in the following table.

Name	Hosted on server
App1	Web1
App2	Web1
App3	Web2
App4	Web2

You purchase Microsoft 365, and the implement directory synchronization. You plan to publish the web applications.

You need to ensure that all the applications are accessible by using the My Apps portal. The solution must minimize administrative effort.

What should you do first?

- A. Deploy one conditional access policy.
- B. Deploy one Application Proxy connector.
- C. Create four application registrations.
- D. Create a site-to-site VPN from Microsoft Azure to the on-premises network.

**Answer:** B

**Explanation:**

The Application Proxy connector is what connects the on-premises environment to the Azure Application Proxy.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy>

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-connectors>

**NEW QUESTION 198**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future. Solution: From the SharePoint admin center, you modify the sharing settings. Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

You need to create a threat management policy in the Security & Compliance admin center.

**NEW QUESTION 199**

- (Exam Topic 5)

Your network contains an Active Directory domain named contoso.com. The domain contains the file servers shown in the following table.

Name	IP address
Server1	192.168.1.10
Server2	192.168.2.10

A file named File1.abc is stored on Server1. A file named File2.abc is stored on Server2. Three apps named App1, App2, and App3 all open files that have the .abc file extension.

You implement Windows Information Protection (WIP) by using the following configurations:

- Exempt apps: App2
- Protected apps: App1
- Windows Information Protection mode: Block

➤ Network boundary: IPv4 range of 192.168.1.1-192.168.1.255 You need to identify the apps from which you can open File1.abc  
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can open File1.abc in App1.	<input type="radio"/>	<input type="radio"/>
You can open File1.abc in App2.	<input type="radio"/>	<input type="radio"/>
You can open File1.abc in App3.	<input type="radio"/>	<input type="radio"/>

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Yes.

App1 is a protect app in the Windows Information Protection policy. File1 is stored on Server1 which is in the Network Boundary defined in the policy. Therefore, you can open File1 in App1.

Box 2: Yes.

App2 is exempt in the Windows Information Protection policy. The protection mode in the policy is block so all apps that are not included in the policy cannot be used to open the file... except for exempt apps.

Therefore, you can open File1 in App2. Box 3: No.

The protection mode in the policy is block so all apps that are not included in the policy as protected apps or listed as exempt from the policy cannot be used to open the file. Therefore, you cannot open File from in App3.

Reference:

<https://docs.microsoft.com/en-us/windows/security/information-protection/windows-information-protection/crea>

**NEW QUESTION 204**

- (Exam Topic 5)

You have a document in Microsoft OneDrive that is encrypted by using Microsoft Azure Information Protection as shown in the following exhibit.

## Protection settings ⓘ

Azure (cloud key) HYOK (AD RMS)

Select the protection action type ⓘ

- ☒ Set permissions
- ☐ Set user-defined permissions (Preview)

USERS	PERMISSIONS	
M365x901434.onmicrosoft.com	Co-Owner	...
+ Add permissions		

## Content expiration

Always Never **By days**

Number of days the content is valid

30 ✓

## Allow offline access

Balance security requirements (includes access after revocation) with the flexibility to open protected content without an Internet connection. [More information and recommended settings](#)

Always Never **By days**

Number of days the content is available without an Internet connection

7 ✓

Protection template ID - template id is automatically generated after template is saved

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
 NOTE: Each correct selection is worth one point.

If you copy the file from OneDrive to your internet connected computer, you [answer choice].

- cannot open the document
- can open the document indefinitely
- can open the document for up to 7 days
- can open the document for up to 30 days

If you email the document to a user outside your organization, the user [answer choice].

- cannot open the document
- can open the document indefinitely
- can open the document for up to 7 days
- can open the document for up to 30 days

- A. Mastered  
 B. Not Mastered

**Answer:** A

### Explanation:

Box 1:

If you copy the file from OneDrive to your internet connected computer, you can open the document for up to 30 days. This is because the "Number of days the content is valid" setting is set to 30 days.

Box 2:

If you email the document to a user outside your organization, the user cannot open the document. To open the document, the user would need to be added to the Users list and assigned permission. With the configuration in the exhibit, only the user listed in the Users list and the creator of the document can open the document.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/configure-policy-protection>

#### NEW QUESTION 209

- (Exam Topic 5)

You are building a Microsoft Office Add-in for Outlook that will use the Microsoft Graph REST API to retrieve a user's documents from a Microsoft SharePoint Online site. What should the add-in provide to retrieve the documents on behalf of the user?

- A. a refresh token
- B. an identity token
- C. a single sign-on (SSO) token
- D. an access token

**Answer:** D

#### NEW QUESTION 210

- (Exam Topic 5)

You have a Microsoft 365 subscription.

A new corporate security policy states that you must automatically send DLP incident reports to the users in the legal department.

You need to schedule the email delivery of the reports. The solution must ensure that the reports are sent as frequently as possible.

How frequently can you share the reports?

- A. hourly
- B. monthly
- C. weekly
- D. daily

**Answer:** C

#### Explanation:

From the Dashboard in the Security and Compliance center, you can view various reports including the DLP Incidents report. From there you can configure a schedule to email the reports. In the schedule configuration, there are two choices for the frequency: Weekly or Monthly. Therefore, to ensure that the reports are sent as frequently as possible, you need to select Weekly.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/create-a-schedule-for-a-report>

#### NEW QUESTION 214

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

### PROVISION FROM ACTIVE DIRECTORY

#### Azure AD Connect cloud provisioning

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

#### Azure AD Connect sync

Sync Status	Enabled
Last Sync	Less than 1 hour ago
Password Hash Sync	Enabled

### USER SIGN-IN

<a href="#">Federation</a>	Disabled	0 domains
<a href="#">Seamless single sign-on</a>	Enabled	1 domain
<a href="#">Pass-through authentication</a>	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.  
 Solution: From the on-premises Active Directory domain, you set the UPN suffix for User2 to @contoso.com. You instruct User2 to sign in as user2@contoso.com.  
 Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

The on-premises Active Directory domain is named contoso.com. You can enable users to sign on using a different UPN (different domain), by adding the domain to Microsoft 365 as a custom domain. Alternatively, you can configure the user account to use the existing domain (contoso.com).

**NEW QUESTION 217**

- (Exam Topic 5)

Your company has a Microsoft 365 tenant.

You plan to allow users from the engineering department to enroll their mobile device in mobile device management (MDM).

The device type restrictions are configured as shown in the following table.

Priority	Name	Allowed platform	Assigned to
1	iOS	iOS	Marketing
2	Android	Android	Engineering
Default	All users	All platforms	All users

The device limit restrictions are configured as shown in the following table.

Priority	Name	Device limit	Assigned to
1	Engineering	15	Engineering
2	West Region	5	Engineering
Default	All users	10	All users

What is the effective configuration for the members of the Engineering group? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Device limit:

5

10

15

Allowed platform:

Android only

iOS only

All platforms

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

When multiple policies are applied to groups that users are a member of, only the highest priority (lowest number) policy applies.

In this case, the Engineering users are assigned two device type policies (the default policy and the priority 2 policy). The priority 2 policy has a higher priority than the default policy so the Engineers' allowed platform is Android only.

The engineers have two device limit restrictions policies applied them. The priority1 policy is a higher priority than the priority2 policy so the priority1 policy device limit (15) applies.

Reference:

<https://docs.microsoft.com/en-us/intune/enrollment/enrollment-restrictions-set>

**NEW QUESTION 222**

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes the users shown in the following table.

Name	Usage location	Membership
User1	United States	Group1, Group2
User2	<i>Not applicable</i>	Group2
User3	<i>Not applicable</i>	Group1
User4	Canada	Group1

Group2 is a member of Group1.

You assign a Microsoft Office 365 Enterprise E3 license to Group1. You need to identify how many Office 365 E3 licenses are assigned. What should you identify?

- Answer: C**

Group-based licensing currently does not support groups that contain other groups (nested groups). If you apply a license to a nested group, only the immediate first-level user members of the group have the licenses applied. Therefore, User2 will not be assigned a license.

When Azure AD assigns group licenses, any users without a specified usage location inherit the location of the directory. Therefore, User3 will be assigned a license and his usage location will be set to the location of the directory.
