After you run a failover plan, you can perform the following actions on it2:
> Undo — reverts VMs in the failover plan back to their original state at the production sit2e.
> Start — runs the failover plan again if you need to repeat the failover operation for some reaso2n.
> Edit — modifies the settings of the failover plan, such as adding or removing VMs, changing their order or time delay1.
> Delete — removes the failover plan from Veeam Backup & Replication. This does not affect the VM replicas that are used by the plan1.

A file on a Windows VM hosted on vSphere is corrupted and must be restored. VMware tools are installed and up to date on the VM. For some reason, the Veeam mount server cannot connect to the VM through the network. Which of the following restore methods provides the fastest restore (RTO)?

A. Run Veeam file restore wizard and let it restore through VIX.
B. Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore.
C. It is impossible to restore the file on the VM if the mount server cannot reach it through the network.
D. Run Veeam file restore wizard and use the "copy to" to download the file locally in a shared folder.

Answer: A

Explanation:
According to the Veeam Backup & Replication user guide1, you can use the File Level Restore wizard to restore files and folders from VM guest OSes that run Windows2. The wizard allows you to choose how to access the VM guest OS: through network or through VIX2VIX is a VMware API that enables programmatic access to virtual machine operations3.
Therefore, if you want to restore a file on a Windows VM hosted on vSphere and the mount server cannot connect to the VM through the network, you can use VIX as an alternative method of access2. This will allow you to restore the file directly to its original location without downloading it locally or starting an Instant VM Recovery session.

NEW QUESTION 30
- (Exam Topic 1)
Veeam Backup & Replication is currently configured to back up different workloads: Windows VMs on vSphere and Linux VMs on vSphere. A secondary copy of all the backups including transaction logs must be created. Which of the following backup copy job configurations is the simplest?

A. A single "periodic copy" backup copy job
B. A single "immediate copy" backup copy job
C. Two "immediate copy" backup copy jobs
D. Two "periodic copy" backup copy jobs

Answer: B

Explanation:
According to the Veeam Backup & Replication best practice guide1, a new copy job mode was added called immediate copy. This mode immediately starts the backup copy job as soon as restore points appear in the repository. It also provides the ability to copy SQL and Oracle log backups which is not possible with
traditional periodic backup cop1y2.
Therefore, if you want to create a secondary copy of all the backups including transaction logs, you should use an immediate copy backup copy job. The simplest configuration would be a single immediate copy backup copy job for all workloads (option B)
