NEW QUESTION 238

What are the three main components of Check Point security management architecture?

- A. SmartConsole, Security Management, and Security Gateway
- B. Smart Console, Standalone, and Security Management
- C. SmartConsole, Security policy, and Logs & Monitoring
- D. GUI-Client, Security Management, and Security Gateway

Answer: A

NEW QUESTION 240

Which is a main component of the Check Point security management architecture?

- A. Identity Collector
- B. Endpoint VPN client
- C. SmartConsole
- D. Proxy Server

Answer: C

Explanation:

<https://community.checkpoint.com/t5/Check-Point-for-Beginners-2-0/Part-1-The-Architecture/ba-p/88043> Security Gateway (SG) is usually deployed on the perimeter to control and secure traffic with Firewall and Threat Prevention capabilities.

Security Management Server (SMS) defines and controls security policies on the Gateways. It can also be used to as a log server with built-in system of log indexing (SmartLog) and event correlation (SmartEvent – a SIEM-like solution for Check Point products). Usually, SMS is the main element of central management with multiple Security Gateways in operation. Nevertheless, you need an SMS even if your security system has a single gateway only.

SmartConsole is a GUI administration tool to connect to SMS. Through this tool, a security administrator is able to prepare and apply security policies to the Security Gateways.

NEW QUESTION 241

Log query results can be exported to what file format?

- A. Word Document (docx)
- B. Comma Separated Value (csv)
- C. Portable Document Format (pdf)
- D. Text (txt)

Answer: B

NEW QUESTION 244

Which statement describes what Identity Sharing is in Identity Awareness?

- A. Management servers can acquire and share identities with Security Gateways
- B. Users can share identities with other users
- C. Security Gateways can acquire and share identities with other Security Gateways
- D. Administrators can share identifies with other administrators

Answer: C

Explanation:

Identity Sharing

Best Practice - In environments that use many Security Gateways and AD Query, we recommend that you set only one Security Gateway to acquire identities from a given Active Directory domain controller for each physical site. If more than one Security Gateway gets identities from the same AD server, the AD server can become overloaded with WMI queries.

Set these options on the Identity Awareness > Identity Sharing page of the Security Gateway object:

NEW QUESTION 246

NEW QUESTION 247

After trust has been established between the Check Point components, what is TRUE about name and IP-address changes?

- A. Security Gateway IP-address cannot be changed without re-establishing the trust
- B. The Security Gateway name cannot be changed in command line without re-establishing trust

- C. The Security Management Server name cannot be changed in SmartConsole without re-establishing trust
- D. The Security Management Server IP-address cannot be changed without re-establishing the trust

Answer: A

NEW QUESTION 249

Fill in the blank: Permanent VPN tunnels can be set on all tunnels in the community, on all tunnels for specific gateways, or _____.

- A. On all satellite gateway to satellite gateway tunnels
- B. On specific tunnels for specific gateways
- C. On specific tunnels in the community
- D. On specific satellite gateway to central gateway tunnels

Answer: C

Explanation:

Each VPN tunnel in the community may be set to be a Permanent Tunnel. Since Permanent Tunnels are constantly monitored, if the VPN tunnel is down, then a log, alert, or user defined action, can be issued. A VPN tunnel is monitored by periodically sending "tunnel test" packets. As long as responses to the packets are received the VPN tunnel is considered "up." If no response is received within a given time period, the VPN tunnel is considered "down." Permanent Tunnels can only be established between Check Point Security Gateways. The configuration of Permanent Tunnels takes place on the community level and:
