You need to share the Power BI dashboard with coworkers.

What are three possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Create a Power BI workspace and grant coworkers permissions.
- B. Publish the dashboard as an app to your coworkers.
- C. Export the data into Common Data Service for others to manipulate in Power BI.
- D. Export the data to Microsoft Excel for coworkers to import and view in Power BI.
- E. Embed reports in your company's internal web portal.

**Answer:** ABE

**Explanation:**

A: Basic Sharing for Dashboards and Reports through a workspace is the most common way of sharing the Power BI content. Basic Sharing is very simple and easy to use method. You can simply click on the Share button in the dashboard or report, and then share it with other users.

B: Apps are great sharing method for multiple environment, and best way of sharing for users in production environment. Power BI App is the solution for multiple environment approach. With Power BI App, your development environment (workspace), and user environment (App) are isolated from each other.

Note: If you are using SharePoint online as a portal for document management and some other reasons already, then consider using Embed in SharePoint Online feature of Power BI reports. This method is secure and you can share the report only with Power BI users you want.

E: Sometimes, you don't need a secure way of sharing, you may search for an easy and free way of sharing, and your content is not confidential or sensitive. Publish to web is your friend in such situation. This is the only free way of sharing in Power BI, but be aware that this method is not secure.

Publish to web method, gives you an embed code, which you can use in any web pages to embed the Power BI report in it

Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE. Each correct selection is worth one point.

Component types	Requirement	Component type
Dashboard	Display data from a Microsoft Excel workbook that has multiple worksheets into one chart.	Component type
Report	Display the top departmental goal metrics and alert users when specific thresholds targets are met.	Component type
	Display Sales charts that can be filtered by region.	Component type

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Report  
Reports are more detailed data displayed in many formats like chart, graphs list and in tabular, etc.  
Box 2: Dashboard  
Dashboards are a business key performance indicator view where it displays key values that can change business profits and can be glanced at one screen.  
Box 3: Report  
Power BI dashboards cannot slice and dice, but reports have many ways to filter and slice.  
Note: Power BI dashboards are one placeholder to display the most important decision- making facts to run a business. But reports are more detailed data displayed in many formats like chart, graphs list and in tabular, etc. Reports are based on one dataset or one business unit data for example reports of a store belonging to California.

**NEW QUESTION 65**

HOTSPOT - (Topic 3)

You have a Power BI report. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can export data from a visualization in a Power BI report.	<input type="radio"/>	<input type="radio"/>
You can show the data behind a visual report on your screen without exporting the data.	<input type="radio"/>	<input type="radio"/>
You must export data to view supporting data for a KPI.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Yes

If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report.

Note: Export data from a Power BI dashboard

? Select the ellipsis in the upper-right corner of the visualization.

? Choose the Export data icon.

? Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data.

? Your browser will prompt you to save the file. Once saved, open the .csv file in Excel.

Box 2: No

Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel.

Box 3: Yes

A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file.

Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.
