NEW QUESTION 1

- (Exam Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager. Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.

Does this meet the goal?

- A. Yes
- B. NO

Answer: A

Explanation:

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager. To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrolls in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune. NEW QUESTION 2

- (Exam Topic 2)

You need to meet the technical requirement for large-volume document retrieval. What should you create?

- A. a data loss prevention (DLP) policy from the Security & Compliance admin center
- B. an alert policy from the Security & Compliance admin center
- C. a file policy from Microsoft Cloud App Security
- D. an activity policy from Microsoft Cloud App Security

Answer: D

Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/activity-policies-and-alerts>

NEW QUESTION 3

- (Exam Topic 2)

Which report should the New York office auditors view?

- A. DLP policy matches
- B. DLP false positives and overrides
- C. DLP incidents
- D. Top Senders and Recipients

Answer: C

Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies>

This report also shows policy matches over time, like the policy matches report. However, the policy matches report shows matches at a rule level; for example, if an email matched three different rules, the policy matches report shows three different line items. By contrast, the incidents report shows matches at an item level; for example, if an email matched three different rules, the incidents report shows a single line item for that piece of content. Because the report counts are aggregated differently, the policy matches report is better for identifying matches with specific rules and fine tuning DLP policies. The incidents report is better for identifying specific pieces of content that are problematic for your DLP policies.

NEW QUESTION 4

- (Exam Topic 3)

You plan to implement the endpoint protection device configuration profiles to support the planned changes. You need to identify which devices will be supported, and how many profiles you should implement.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Supported devices:

	▼
Device1 only	
Device1 and Device2 only	
Device1 and Device3 only	
Device1, Device2, and Device3	
Device1, Device4, and Device5	
Device1, Device2, Device3, Device4, and Device5	

Number of required profiles:

NEW QUESTION 5

- (Exam Topic 3)

You need to create the Safe Attachments policy to meet the technical requirements. Which option should you select?

- A. Replace
- B. Enable redirect
- C. Block
- D. Dynamic Delivery

Answer: D

NEW QUESTION 6

- (Exam Topic 4)

DRAG DROP

You have a Microsoft 365 subscription.

In the Exchange admin center, you have a data loss prevention (DLP) policy named Policy1 that has the following configurations:

- Block emails that contain financial data.
- Display the following policy tip text: Message blocked.

From the Security & Compliance admin center, you create a DLP policy named Policy2 that has the following configurations:

- Use the following location: Exchange email.
- Display the following policy tip text: Message contains sensitive data.
- When a user sends an email, notify the user if the email contains health records.

What is the result of the DLP policies when the user sends an email? To answer, drag the appropriate results to the correct scenarios. Each result may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Results

The email will be blocked, and the user will receive the policy tip: Message blocked.

The email will be blocked, and the user will receive the policy tip: Message contains sensitive data.

The email will be allowed, and the user will receive the policy tip: Message blocked.

The email will be allowed, and the user will receive the policy tip: Message contains sensitive data.

The email will be allowed, and a message policy tip will NOT be displayed.

Answer Area

When the user sends an email that contains financial data and health records:

When the user sends an email that contains only financial data:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: The email will be blocked, and the user will receive the policy tip: Message blocked.

If you've created DLP policies in the Exchange admin center, those policies will continue to work side by side with any policies for email that you create in the Security & Compliance Center. But note that rules created in the Exchange admin center take precedence. All Exchange mail flow rules are processed first, and then the DLP rules from the Security & Compliance Center are processed.

Box 2: The email will be allowed, and the user will receive the policy tip: Message contains sensitive data. Reference: <https://docs.microsoft.com/en-us/microsoft-365/compliance/how-dlp-works-between-admin-centers>

NEW QUESTION 7

- (Exam Topic 4)

You have a Microsoft 365 subscription.

All users are assigned Microsoft Azure Active Directory Premium licenses.

From the Device Management admin center, you set Microsoft Intune as the MDM authority.

You need to ensure that when the members of a group named Marketing join a device to Azure Active Directory (Azure AD), the device is enrolled automatically in Intune. The Marketing group members must be limited to five devices enrolled in Intune.

Which two options should you use to perform the configurations? To answer, select the appropriate blades in the answer area.

NOTE: Each correct selection is worth one point.

- Incomplete user enrollments

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Device enrollment manager (DEM) is an Intune permission that can be applied to an Azure AD user account and lets the user enroll up to 1,000 devices. You can create and manage enrollment restrictions that define what devices can enroll into management with Intune, including the:

- > Number of devices.
- > Operating systems and versions.

The Marketing group members must be limited to five devices enrolled in Intune. References:

NEW QUESTION 9

- (Exam Topic 4)

You have a Microsoft 365 tenant.

You plan to implement Endpoint Protection device configuration profiles. Which platform can you manage by using the profile?

- A. Ubuntu Linux
- B. macOS
- C. iOS
- D. Android

Answer: B

Explanation:

Intune device configuration profiles can be applied to Windows 10 devices and macOS devices Note:

There are several versions of this question in the exam. The question has two possible correct answers:

- > Windows 10
- > macOS

Other incorrect answer options you may see on the exam include the following:

- > Android Enterprise
- > Windows 8.1 Reference:

NEW QUESTION 193

- (Exam Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals- Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure pilot co-management

You add a new device named Device 1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager. Solution: You unjoin Device1 from the Active Directory domain.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 196

- (Exam Topic 4)

You have a Microsoft 365 subscription.

From the subscription, you perform an audit log search, and you download all the results. You plan to review the audit log data by using Microsoft Excel.

You need to ensure that each audited property appears in a separate Excel column. What should you do first?

- A. From Power Query Editor, transform the JSON data.
- B. Format the Operations column by using conditional formatting.
- C. Format the AuditData column by using conditional formatting.
- D. From Power Query Editor, transform the XML data.

Answer: A

Explanation:

After you search the Office 365 audit log and download the search results to a CSV file, the file contains a column named AuditData, which contains additional information about each event. The data in this column is formatted as a JSON object, which contains multiple properties that are configured as property:value pairs separated by commas. You can use the JSON transform feature in the Power Query Editor in Excel to split each property in the JSON object in the AuditData column into multiple columns so that each property has its own column. This lets you sort and filter on one or more of these properties

NEW QUESTION 244

- (Exam Topic 4)

Your company has 10 offices. The network contains an Active Directory domain named contoso.com. The domain contains 500 client computers. Each office is configured as a separate subnet. You discover that one of the offices has the following:

- > Computers that have several preinstalled applications
- > Computers that use nonstandard computer names
- > Computers that have Windows 10 preinstalled
- > Computers that are in a workgroup

You must configure the computers to meet the following corporate requirements:

- > All the computers must be joined to the domain.
- > All the computers must have computer names that use a prefix of CONTOSO.
- > All the computers must only have approved corporate applications installed.

You need to recommend a solution to redeploy the computers.

The solution must minimize the deployment time.

What should you recommend?

- A. a provisioning package
- B. wipe and load refresh
- C. Windows Autopilot
- D. an in-place upgrade

Answer: A

Explanation:

By using a Provisioning, IT administrators can create a self-contained package that contains all of the configuration, settings, and apps that need to be applied to a device.

NEW QUESTION 246

- (Exam Topic 4)

You have a Microsoft 365 tenant that has Enable Security defaults set to No in Azure Active Directory (Azure AD). The tenant has two Compliance Manager assessments as shown in the following table.

NEW QUESTION 257

- (Exam Topic 4)

Your network contains an Active Directory domain named contoso.com. The domain contains 100 Windows 8.1 devices. You plan to deploy a custom Windows 10 Enterprise image to the Windows 8.1 devices. You need to recommend a Windows 10 deployment method. What should you recommend?

- A. a provisioning package
- B. an in place upgrade
- C. wipe and load refresh
- D. Windows Autopilot

Answer: C

Explanation:

<https://docs.microsoft.com/en-us/windows/deployment/deploy-windows-mdt/upgrade-to-windows-10-with-the>

In-place upgrade differs from computer refresh in that you cannot use a custom image to perform the in-place upgrade. In this article we will add a default Windows 10 image to the production deployment share specifically to perform an in-place upgrade.

<https://docs.microsoft.com/en-us/windows/deployment/deploy-windows-mdt/refresh-a-windows-7-computer-wi> To complete a computer refresh you will: Back up data and settings locally, in a backup folder. Wipe the partition, except for the backup folder. Apply the new operating system image. Install other applications.

Restore data and settings.
