A. Mastered
 B. Not Mastered

Answer: A

Explanation:

Box 1: active periods Active batch periods

With the release of Platform update 21, an additional level of control over when batch jobs execute is now available. Previously, it was only possible to schedule a batch job to execute every hour for a specified number of hours or until a given date. Administrators can now provide information for an additional active period, such as in the following scenarios:

- ? Specifying time ranges during which jobs within a batch group can start execution.
- ? Selecting to run batch jobs outside of office hours only.
- ? Setting the recurrence for anytime within the active period. For example, you administrator might select to run the batch jobs every hour, but only between the hours of 6:00 PM and 8:00 AM.

Box 2: scheduling priority

In Platform update 31, you can turn on the Batch priority-based scheduling feature in Feature management. Priority-based scheduling decouples batch groups from the batch server and allows you to define priorities for batch groups. It is no longer necessary to assign batch jobs to batch servers. Instead, relative scheduling priorities based on business requirements are used to determine the order in which tasks are run across available batch servers.

Box 3: alerts

Alerts form a notification system for critical events in finance and operations. You can use alerts to stay informed about events that you want to track during the workday. You can set up a set of alert rules so that you're alerted when a batch job ends, ends in error, or is canceled. You can select whether the alerts are emailed to you or appear as notifications in the Action center. Alerts can be set up per batch job and per user.

NEW QUESTION 152

- (Topic 6)

Dynamics 365 Finance is implemented at your company.

Users in the accounts payable roles and inventory management roles can edit the general ledger details for all departments. These roles must not be able to change the inventory on hand or be able to pay a parts supplier. The users have physical access to warehouses.

You attempt to remove the users from the roles and see that the users are then added back to the roles.

Users must not be able to be added to both roles. Users in a single role must be able to perform their duties.

You need to ensure that users are assigned to the proper roles.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Remove the privileges from the roles.
- B. Include the users in automatic assignment.
- C. Set up segregation of duties for the users.
- D. Remove segregation of duties for the users.
- E. Exclude the users from automatic assignment.

Answer: BC

Explanation:

B: To use anything other than common capabilities in finance and operations apps, users must be assigned to security roles. You can assign users to roles automatically, based on rules and business data, exclude users from automatic role assignment, or add users to roles manually.

C: You can set up rules to separate tasks that must be performed by different users. This concept is named segregation of duties.

This option provides a system administrator or batch job manager with the ability to cancel already executing tasks for jobs that are in the process of being canceled. This provides a much faster mechanism to cancel a long running job that is impacting system usage elsewhere.
