Microsoft 365 Administrator Exam

NEW QUESTION 1

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 subscription.

You need to review metrics for the following: The daily active users in Microsoft Teams Recent Microsoft service issues

What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Teams daily active users:

<input type="checkbox"/>	Microsoft Secure Score
<input type="checkbox"/>	Adoption Score
<input type="checkbox"/>	Service health
<input type="checkbox"/>	Usage reports

Recent Microsoft service issues:

<input type="checkbox"/>	Microsoft Secure Score
<input type="checkbox"/>	Adoption Score
<input type="checkbox"/>	Service health
<input type="checkbox"/>	Usage reports

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Usage reports

The daily active users in Microsoft Teams

Microsoft 365 Reports in the admin center - Microsoft Teams usage activity

The brand-new Teams usage report gives you an overview of the usage activity in Teams, including the number of active users, channels and messages so you can quickly see how many users across your organization are using Teams to communicate and collaborate. It also includes other Teams specific activities, such as the number of active guests, meetings, and messages.

Box 2: Service Health

Recent Microsoft service issues

You can view the health of your Microsoft services, including Office on the web, Yammer, Microsoft Dynamics CRM, and mobile device management cloud services, on the Service health page in the Microsoft 365 admin center. If you are experiencing problems with a cloud service, you can check the service health to determine whether this is a known issue with a resolution in progress before you call support or spend time troubleshooting.

NEW QUESTION 2

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 E5 subscription.

You create an account for a new security administrator named SecAdmin1.

You need to ensure that SecAdmin1 can manage Office 365 Advanced Threat Protection (ATP) settings and policies for Microsoft Teams, SharePoint, and OneDrive.

Solution: From the Azure Active Directory admin center, you assign SecAdmin1 the Teams Service Administrator role.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

You need to assign the Security Administrator role. Reference:

NEW QUESTION 36

HOTSPOT - (Topic 6)
HOTSPOT

You have a new Microsoft 365 E5 tenant. Enable Security defaults is set to Yes.
A user signs in to the tenant for the first time.
Which multi-factor authentication (MFA) method can the user use, and how many days does the user have to register for MFA? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

MFA method:

Call to phone

Email message

Security questions

Text message to phone

Notification to Microsoft Authenticator app

Number of days:

7

14

30

60

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Notification to Microsoft Authenticator app
Do users have 14 days to register for Azure AD Multi-Factor Authentication?
Users have 14 days to register for MFA with the Microsoft Authenticator app from their smart phones, which begins from the first time they sign in after security defaults has been enabled. After 14 days have passed, the user won't be able to sign in until MFA registration is completed.
Box 2: 14
Azure AD Identity Protection will prompt your users to register the next time they sign in interactively and they'll have 14 days to complete registration. During this 14-day period, they can bypass registration if MFA isn't required as a condition, but at the end of the period they'll be required to register before they can complete the sign-in process.

NEW QUESTION 47

- (Topic 6)

You have a Microsoft 365 E3 subscription that uses Microsoft Defender for Endpoint Plan 1.

Which two Defender for Endpoint features are available to the subscription? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. advanced hunting

B. security reports

C. digital certificate assessment

D. device discovery

E. attack surface reduction (ASR)

Answer: BE

Explanation:

B: Overview of Microsoft Defender for Endpoint Plan 1, Reporting

The Microsoft 365 Defender portal (<https://security.microsoft.com>) provides easy access to information about detected threats and actions to address those threats.

The Home page includes cards to show at a glance which users or devices are at risk, how many threats were detected, and what alerts/incidents were created.

The Incidents & alerts section lists any incidents that were created as a result of triggered alerts. Alerts and incidents are generated as threats are detected across devices.

The Action center lists remediation actions that were taken. For example, if a file is sent to quarantine, or a URL is blocked, each action is listed in the Action center on the History tab.

The Reports section includes reports that show threats detected and their status.

E: What can you expect from Microsoft Defender for Endpoint P1?

Microsoft Defender for Endpoint P1 is focused on prevention/EPP including:

- Next-generation antimalware that is cloud-based with built-in AI that helps to stop ransomware, known and unknown malware, and other threats in their tracks.
- (E) Attack surface reduction capabilities that harden the device, prevent zero days, and offer granular control over access and behaviors on the endpoint.
- Device based conditional access that offers an additional layer of data protection and breach prevention and enables a Zero Trust approach.

The below table offers a comparison of capabilities are offered in Plan 1 versus Plan 2.

NEW QUESTION 48

- (Topic 6)

Your on-premises network contains an Active Directory domain. You have a Microsoft 365 E5 subscription.

You plan to implement a hybrid configuration that has the following requirements:

- Minimizes the number of times users are prompted for credentials when they access Microsoft 365 resources
- Supports the use of Azure AD Identity Protection

You need to configure Azure AD Connect to support the planned implementation. Which two options should you select? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Password Hash Synchronization
- B. Password writeback
- C. Directory extension attribute sync
- D. Enable single sign-on
- E. Pass-through authentication

Answer: AB

NEW QUESTION 53

HOTSPOT - (Topic 6)

You have a Microsoft 365 E5 subscription.

You plan to use a mailbox named Mailbox1 to analyze malicious email messages. You need to configure Microsoft Defender for Office 365 to meet the following requirements:

- Ensure that incoming email is NOT filtered for Mailbox1.

• Detect impersonation and spoofing attacks on all other mailboxes in the subscription. Which two settings should you configure? To answer, select the appropriate settings in the answer area.

Answer Area

Policies

Anti-phishing

Anti-spam

Anti-malware

Safe Attachments

Safe Links

Rules

Tenant Allow/Block Lists

Email authentication settings

DKIM

Advanced delivery

Enhanced filtering

Quarantine policies

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

? Safe Attachments policy: This policy allows you to specify how to handle email attachments that might contain malware. You can create a custom policy for Mailbox1 and set the action to Do not scan attachments. This will ensure that incoming email is not filtered for Mailbox1. You can also enable the Redirect attachment option to send a copy of the original attachment to another mailbox for analysis1.

? Anti-phishing policy: This policy helps you protect your organization from impersonation and spoofing attacks. You can create a default policy for all other mailboxes in the subscription and enable the following features: Impersonation protection, Spoof intelligence, and Domain authentication. These features will help you detect and block emails that try to impersonate your users, domains, or trusted senders2.

NEW QUESTION 57

- (Topic 6)

You have a Microsoft 365 subscription that uses an Azure AD tenant named contoso.com. The tenant contains the users shown in the following table.

Name	Role
User1	Exchange Administrator
User2	User Administrator
User3	Global Administrator
User4	None

You add another user named User5 to the User Administrator role. You need to identify which two management tasks User5 can perform. Which two tasks should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Delete User2 and User4 only.
- B. Reset the password of User4 only
- C. Reset the password of any user in Azure AD.
- D. Delete User1, User2, and User4 only.
- E. Reset the password of User2 and User4 only.
- F. Delete any user in Azure AD.

Answer: AE

Explanation:

Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below). Only on users who are non-admins or in any of the following limited admin roles:

- Directory Readers
- Guest Inviter
- Helpdesk Administrator
- Message Center Reader
- Reports Reader

You have a Microsoft 365 subscription.

You need to add additional onmicrosoft.com domains to the subscription. The additional domains must be assignable as email addresses for users.

What is the maximum number of onmicrosoft.com domains the subscription can contain?

- A. 1
- B. 2
- C. 5
- D. 10

Answer: C

Explanation:

You are limited to five onmicrosoft.com domains in your Microsoft 365 environment, so make sure to check for spelling and to assess your need if you choose to create a new one.

Device2	Windows 10	Joined
Device3	Android	Registered

You have a Conditional Access policy named CAPolicy1 that has the following settings: 1.Assignments

? Users or workload identities: Group1

? Cloud apps or actions: Office 365 SharePoint Online

? Conditions

- Filter for devices: Exclude filtered devices from the policy

- Rule syntax: device.displayName -startsWith "Device" 2.Access controls

? Grant

- Grant: Block access

? Session: 0 controls selected 3.Enable policy: On

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

User1 can access Site1 from Device1.

Yes

☐

No

☐

User2 can access Site1 from Device2.

☐☐

User2 can access Site1 from Device3.

☐☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No

User1 is member of Group1 and has Device1.

Device1 is not Azure AD joined.

Note: Requiring a hybrid Azure AD joined device is dependent on your devices already being hybrid Azure AD joined.

Box 2: Yes

User2 is member of Group1 and has devices Device2 and Device3. Device2 is Azure AD joined.

Device2 is excluded from CAPolicy1 (which would block access to Site1). Box 3: Yes

User2 is member of Group1 and has devices Device2 and Device3.
Device3 is Android and is Azure AD registered.
Device3 is excluded from CAPolicy1 (which would block access to Site1).
Note: On Windows 7, iOS, Android, macOS, and some third-party web browsers, Azure AD identifies the device using a client certificate that is provisioned when the device is registered with Azure AD. When a user first signs in through the browser the user is prompted to select the certificate. The end user must select this certificate before they can continue to use the browser.

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Box 1: Only T4il\$pin45dg4

Box 2: can attempt to sign in immediately Note: Manage Azure AD smart lockout values

Based on your organizational requirements, you can customize the Azure AD smart lockout values. Customization of the smart lockout settings, with values specific to your organization, requires Azure AD Premium P1 or higher licenses for your users. Customization of the smart lockout settings is not available for Azure China 21Vianet tenants.

To check or modify the smart lockout values for your organization, complete the following steps:

? Sign in to the Entra portal.

? Search for and select Azure Active Directory, then select Security > Authentication methods > Password protection.

? Set the Lockout threshold, based on how many failed sign-ins are allowed on an account before its first lockout.

? The default is 10 for Azure Public tenants and 3 for Azure US Government tenants.

? Set the Lockout duration in seconds, to the length in seconds of each lockout.

? The default is 60 seconds (one minute).

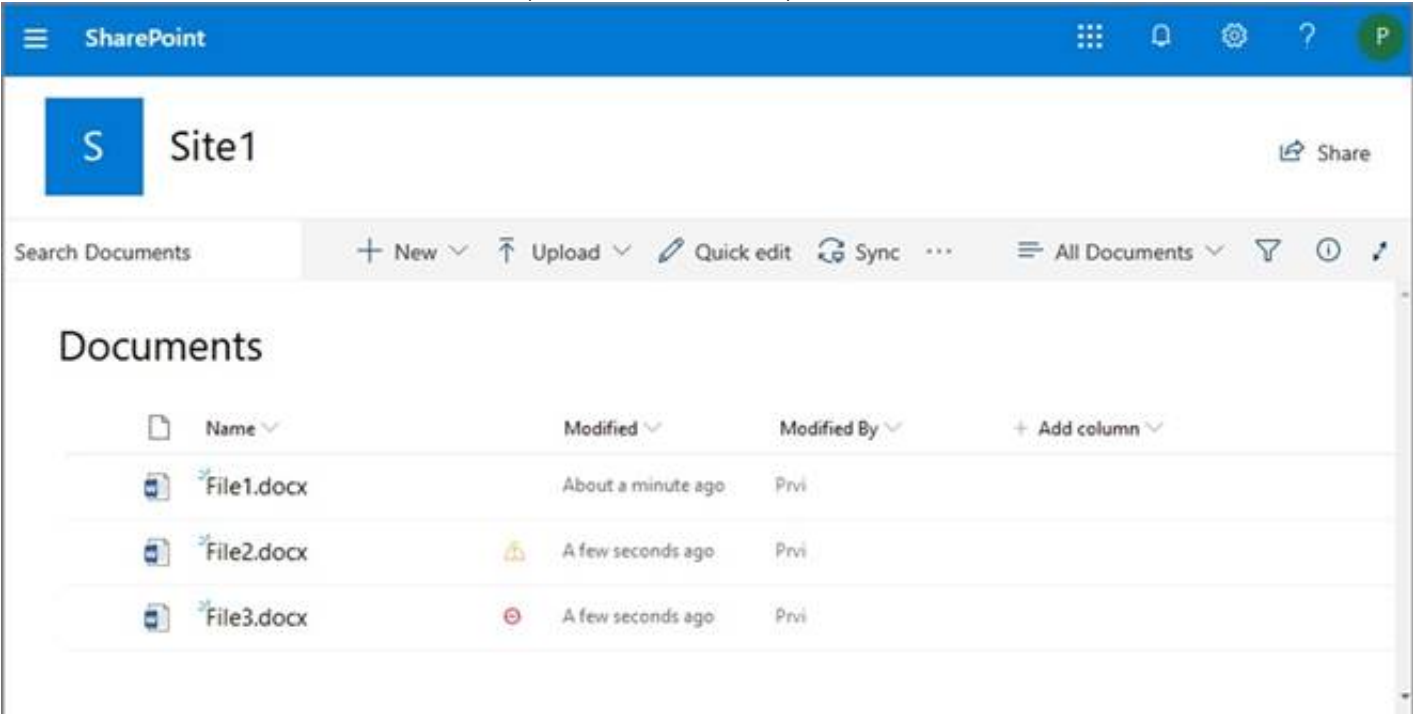

If the first sign-in after a lockout period has expired also fails, the account locks out again. If an account locks repeatedly, the lockout duration increases.

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.
Solution: From the Microsoft Entra admin center, you assign User2 the Security Reader role. You instruct User2 to sign in as user2@contoso.com.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

This is not a permissions issue so you do not need to assign the Security Reader role. The on-premises Active Directory domain is named contoso.com. User2 could sign on as user2@contoso.com but you would first need to change the UPN of User2 to user2@contoso.com.

- (Topic 6)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain. You deploy an Azure AD tenant.
Another administrator configures the domain to synchronize to Azure AD.
You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.
You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.
You need to ensure that the 10 user accounts are synchronized to Azure AD. Solution: From the Synchronization Rules Editor, you create a new outbound synchronization rule.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:
The question states that “all the user account synchronizations completed successfully”. Therefore, the synchronization rule is configured correctly. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

NEW QUESTION 115

HOTSPOT - (Topic 6)
Your company has a Microsoft 365 subscription that uses an Azure AD tenant named contoso.com. The tenant contains the users shown in the following table.

Name	Role	Office 365 role group
User1	None	Compliance Data Administrator
User2	Global Administrator	None

You create a retention label named Label 1 that has the following configurations:

- Retains content for five years
- Automatically deletes all content that is older than five years

You turn on Auto labeling for Label1 by using a policy named Policy1. Policy1 has the following configurations:

- Applies to content that contains the word Merger
- Specifies the OneDrive accounts and SharePoint sites locations

You run the following command.
Set-RetentionCompliancePolicy Policy1 -RestrictiveRetention Strue -Force
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NEW QUESTION 124

- (Topic 6)

Your network contains an on-premises Active Directory domain named contoso.local. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates an Azure AD tenant named contoso.onmicrosoft.com.

You plan to install Azure AD Connect on a member server and implement pass-through authentication.

You need to prepare the environment for the planned implementation of pass-through authentication.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From a domain controller install an Authentication Agent
- B. From the Microsoft Entra admin center, configure an authentication method.
- C. From Active Director, 'Domains and Trusts add a UPN suffix
- D. Modify the email address attribute for each user account.
- E. From the Microsoft Entra admin center, add a custom domain name.
- F. Modify the User logon name for each user account.

Answer: ABE

Explanation:

Deploy Azure AD Pass-through Authentication Step 1: Check the prerequisites

Ensure that the following prerequisites are in place. In the Entra admin center

* 1. Create a cloud-only Hybrid Identity Administrator account or a Hybrid Identity administrator account on your Azure AD tenant. This way, you can manage the configuration of your tenant should your on-premises services fail or become unavailable.

(E) 2. Add one or more custom domain names to your Azure AD tenant. Your users can sign in with one of these domain names.

(A) In your on-premises environment

* 1. Identify a server running Windows Server 2016 or later to run Azure AD Connect. If not enabled already, enable TLS 1.2 on the server. Add the server to the same Active Directory forest as the users whose passwords you need to validate. It should be noted that installation of Pass-Through Authentication agent on Windows Server Core versions is not supported.

* 2. Install the latest version of Azure AD Connect on the server identified in the preceding step. If you already have Azure AD Connect running, ensure that the version is supported.

* 3. Identify one or more additional servers (running Windows Server 2016 or later, with TLS 1.2 enabled) where you can run standalone Authentication Agents. These additional servers are needed to ensure the high availability of requests to sign in. Add the servers to the same Active Directory forest as the users whose passwords you need to validate.

* 4. Etc.

(B) Step 2: Enable the feature

Enable Pass-through Authentication through Azure AD Connect.

If you're installing Azure AD Connect for the first time, choose the custom installation path. At the User sign-in page, choose Pass-through Authentication as the Sign On method. On successful completion, a Pass-through Authentication Agent is installed on the same server as Azure AD Connect. In addition, the Pass-through Authentication feature is enabled on your tenant.

Incorrect:

Not C: From Active Directory Domains and Trusts, add a UPN suffix Not D. Modify the email address attribute for each user account. Not F. Modify the User logon name for each user account.

NEW QUESTION 142

HOTSPOT - (Topic 6)
HOTSPOT

Your company uses a legacy on-premises LDAP directory that contains 100 users. The company purchases a Microsoft 365 subscription. You need to import the 100 users into Microsoft 365 by using the Microsoft 365 admin center. Which type of file should you use and which properties are required? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

File type to use:

▼
CSV
JSON
PST
XML

Required properties for each user:

▼
Display Name and Department
First Name and Last Name
User Name and Department
User Name and Display Name

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: CSV

Add multiple users in the Microsoft 365 admin center

? Sign in to Microsoft 365 with your work or school account.

? In the admin center, choose Users > Active users.

? Select Add multiple users.

? On the Import multiple users panel, you can optionally download a sample CSV file with or without sample data filled in.

? Etc.

Note: More information about how to add users to Microsoft 365 Not sure what CSV format is?

A CSV file is a file with comma separated values. You can create or edit a file like this with any text editor or spreadsheet program, such as Excel.

Box 2: User Name and Display Name

What if I don't have all the information required for each user? The user name and display name are required, and you cannot add a new user without this information. If you don't have some of the other information, such as the fax, you can use a space plus a comma to indicate that the field should remain blank.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager.

Solution: You create a device configuration profile from the Device Management admin center.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

It looks like the given answer is correct. There is an on-premises Active Directory synced to Azure Active Directory (Azure AD) So the co-management path1 - Auto-enroll existing clients 1. Hybrid Azure AD 2. Client agent setting for hybrid Azure AD- join 3. Configure auto-enrollment of devices to Intune 4. NEW QUESTION 185

- (Topic 6)

You have a Microsoft 365 subscription that uses Microsoft Defender for Office 365.
 You need to ensure that users are prevented from opening or downloading malicious files from Microsoft Teams, OneDrive, or SharePoint Online.
 What should you do?

- A. Create a new Anti-malware policy
- B. Configure the Safe Links global settings.
- C. Create a new Anti-phishing policy
- D. Configure the Safe Attachments global settings.

Answer: D

Explanation:

Safe Attachments for SharePoint, OneDrive, and Microsoft Teams

In organizations with Microsoft Defender for Office 365, Safe Attachments for SharePoint,

OneDrive, and Microsoft Teams provides an additional layer of protection against malware. After files are asynchronously scanned by the common virus detection engine in Microsoft 365, Safe Attachments opens files in a virtual environment to see what happens (a process known as detonation). Safe Attachments for SharePoint, OneDrive, and Microsoft Teams also helps detect and block existing files that are identified as malicious in team sites and document libraries.
