Which features should you configure? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Requirement	Feature
System maintenance jobs must run outside business hours.	<input type="checkbox"/> active periods <input type="checkbox"/> system job parameters <input type="checkbox"/> working time templates

Inform the IT support team when a critical job fails.	<input type="checkbox"/> alerts <input type="checkbox"/> database logging <input type="checkbox"/> email broadcast

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: active periods Active batch periods

With the release of Platform update 21, an additional level of control over when batch jobs execute is now available. Previously, it was only possible to schedule a batch job to execute every hour for a specified number of hours or until a given date. Administrators can now provide information for an additional active period, such as in the following scenarios:

? Specifying time ranges during which jobs within a batch group can start execution.

? Selecting to run batch jobs outside of office hours only.

? Setting the recurrence for anytime within the active period. For example, you administrator might select to run the batch jobs every hour, but only between the hours of 6:00 PM and 8:00 AM.

Box 2: scheduling priority

In Platform update 31, you can turn on the Batch priority-based scheduling feature in Feature management. Priority-based scheduling decouples batch groups from the batch server and allows you to define priorities for batch groups. It is no longer necessary to assign batch jobs to batch servers. Instead, relative scheduling priorities based on business requirements are used to determine the order in which tasks are run across available batch servers.

Box 3: alerts

Alerts form a notification system for critical events in finance and operations. You can use alerts to stay informed about events that you want to track during the workday. You can set up a set of alert rules so that you're alerted when a batch job ends, ends in error, or is canceled. You can select whether the alerts are emailed to you or appear as notifications in the Action center. Alerts can be set up per batch job and per user.

Complete the following steps to immediately cancel the running task.

? Go to System administration > Inquiries > Batch jobs.

? Select a batch job that has a Status of Canceling.

? On the Batch tasks tab, select Abort on the task, and then select OK.

Note: Sometimes canceling a batch job can take a long time if already executing tasks will take a long time to finish. This option provides a system administrator or batch job manager with the ability to cancel already executing tasks for jobs that are in the process of being canceled. This provides a much faster mechanism to cancel a long running job that is impacting system usage elsewhere.
