Microsoft

Exam Questions AZ-800

Administering Windows Server Hybrid Core Infrastructure

NEW QUESTION 1
SIMULATION - (Topic 4)
Task 7
You need to monitor the security configuration of DC1 by using Microsoft Defender for Cloud.
The required source files are located in a folder named \\dc1.contoso.com\install.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
One possible solution to monitor the security configuration of DC1 by using Microsoft Defender for Cloud is to use the Guest Configuration feature. Guest Configuration is a service that audits settings inside Linux and Windows virtual machines (VMs) to assess their compliance with your organization's security policies. You can use Guest Configuration to monitor the security baseline settings for Windows Server in the Microsoft Defender for Cloud portal by following these steps:
? On DC1, open a web browser and go to the folder named \dc1.contoso.com\install.
Download the Guest Configuration extension file (GuestConfiguration.msi) and save it to a local folder, such as C:\Temp.

2 Run the Guest Configuration extension file and follow the installation wizard . You can choose to install the extension for all users or only for the current user. For more information on how to install the Guest Configuration extension, see Install the Guest Configuration extension.
? After the installation is complete, sign in to the Microsoft Defender for Cloud portal (2).
? In the left pane, select Security Center and then Recommendations.
? In the recommendations list, find and select Vulnerabilities in security configuration on your Windows machines should be remediated (powered by Guest Configuration).
? In the Remediate Security Configurations page, you can see the compliance status of your Windows VMs, including DC1, based on the Azure Compute Benchmark.
The Azure Compute Benchmark is a set of rules that define the desired configuration state of your VMs. You can also see the number of failed, passed, and skipped rules for each VM. For more information on the Azure Compute Benchmark, see Microsoft cloud security benchmark: Azure compute benchmark is now available.
? To view the details of the security configuration of DC1, click on the VM name and then select View details. You can see the list of rules that apply to DC1 and their compliance status. You can also see the severity, description, and remediation steps for each rule. For example, you can see if DC1 has the latest security updates installed, if the firewall is enabled, if the password policy is enforced, and so on.
? To monitor the security configuration of DC1 over time, you can use the Compliance over time chart, which shows the trend of compliance status for DC1 in the past 30 days. You can also use the Compliance breakdown chart, which shows the distribution of compliance status for DC1 by rule severity.
By using Guest Configuration, you can monitor the security configuration of DC1 by using Microsoft Defender for Cloud and ensure that it meets your organization's security standards. You can also use Guest Configuration to monitor the security configuration of other Windows and Linux VMs in your Azure environment.

NEW QUESTION 2
SIMULATION - (Topic 4)
Task 11
You need to ensure that all DHCP clients that get an IP address from SRV1 will be configured to use DC1 as a DNS server.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
One possible solution to ensure that all DHCP clients that get an IP address from SRV1 will be configured to use DC1 as a DNS server is to use the DHCP scope options. DHCP scope options are settings that apply to all DHCP clients that obtain an IP address from a specific scope. You can use the DHCP scope options to specify the DNS server IP address, as well as other parameters such as the default gateway, the domain name, and the DNS suffix. Here are the steps to configure the DHCP scope options on SRV1:
? On SRV1, open DNS Manager from the Administrative Tools menu or by
typing dnsmgmt.msc in the Run box.
? In the left pane, expand your DHCP server and click on IPv4.
? In the right pane, right-click on the scope that you want to configure and select Properties.
? In the Scope Properties dialog box, click on the DNS tab.
? Check the box Enable DNS dynamic updates according to the settings below. This option allows the DHCP server to register and update the DNS records for the DHCP clients.
? Select the option Always dynamically update DNS records. This option ensures that the DHCP server updates both the A and PTR records for the DHCP clients, regardless of whether they request or support dynamic updates.
? Check the box Discard A and PTR records when lease is deleted. This option allows the DHCP server to delete the DNS records for the DHCP clients when their leases expire or are released.
? Check the box Dynamically update DNS records for DHCP clients that do not
request updates. This option allows the DHCP server to update the DNS records for the DHCP clients that do not support dynamic updates, such as legacy or non-Windows clients.
? In the DNS servers section, click on the Add button to add a new DNS server IP address.
? In the Add Server dialog box, enter the IP address of DC1, which is the DNS server that you want to use for the DHCP clients, and click Add.
? Click OK to close the Add Server dialog box and return to the Scope Properties dialog box.
? Click OK to apply the changes and close the Scope Properties dialog box.
Now, all DHCP clients that get an IP address from SRV1 will be configured to use DC1 as a DNS server. You can verify the DNS configuration by using the ipconfig /all command on a DHCP client computer and checking the DNS Servers entry. You can also check the DNS records for the DHCP clients by using the DNS Manager console on DC1.

NEW QUESTION 3
SIMULATION - (Topic 4)
Task 3
You need to configure SRV1 as a DNS server. SRV1 must be able resolve names from the contoso.com domain by using DC1. All other names must be resolved

by using the root hint servers.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
One possible solution to configure SRV1 as a DNS server that can resolve names from the contoso.com domain by using DC1 and all other names by using the root hint servers is to use conditional forwarding. Conditional forwarding allows a DNS server to forward queries for a specific domain name to another DNS server, while using the normal forwarding or root hint servers for other queries. Here are the steps to configure conditional forwarding on SRV1:
    ? On SRV1, open DNS Manager from the Administrative Tools menu or by typing dnsmgmt.msc in the Run box.
? In the left pane, right-click on Conditional Forwarders and select New Conditional
Forwarder.
? In the New Conditional Forwarder dialog box, enter contoso.com as the DNS Domain name.
? In the IP addresses of the master servers box, enter the IP address of DC1, which is the DNS server for the contoso.com domain. You can also click on Resolve to verify the name resolution of DC1.
? Optionally, you can check the box Store this conditional forwarder in Active Directory, and replicate it as follows if you want to store and replicate the conditional forwarder in AD DS. You can also select the replication scope from the drop-down list.
? Click OK to create the conditional forwarder.
Now, SRV1 will forward any queries for the contoso.com domain to DC1, and use the root hint servers for any other queries. You can test the name resolution by using
the nslookup command on SRV1 or another computer that uses SRV1 as its DNS server. For example, you can run the following commands:
nslookup www.contoso.com nslookup www.microsoft.com
The first command should return the IP address of www.contoso.com from DC1, and the second command should return the IP address of www.microsoft.com from a root hint server.

NEW QUESTION 4
SIMULATION - (Topic 4)
Task 5
You need to ensure that a DHCP scope named scope! on SRV1 can service client requests.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
One possible solution to ensure that a DHCP scope named scope1 on SRV1 can service client requests is to activate the scope on the DHCP server. A scope must be activated before it can assign IP addresses to DHCP clients. To activate a DHCP scope on SRV1, perform the following steps:
? On SRV1, open DNS Manager from the Administrative Tools menu or by
typing dnsmgmt.msc in the Run box.
? In the left pane, expand your DHCP server and click on IPv4.
? In the right pane, right-click on the scope that you want to activate, such as scope1, and select Activate.
? Wait for the scope to be activated. You can verify the activation status by checking the icon next to the scope name. A green arrow indicates that the scope is active, while a red arrow indicates that the scope is inactive.
Now, the DHCP scope named scope1 on SRV1 can service client requests and lease IP addresses to DHCP clients. You can test the DHCP service by using the ipconfig
/renew command on a DHCP client computer that is connected to the same subnet as the scope.

NEW QUESTION 5
HOTSPOT - (Topic 3)
Your network contains two Active Directory forests and a domain trust as shown in the following exhibit.
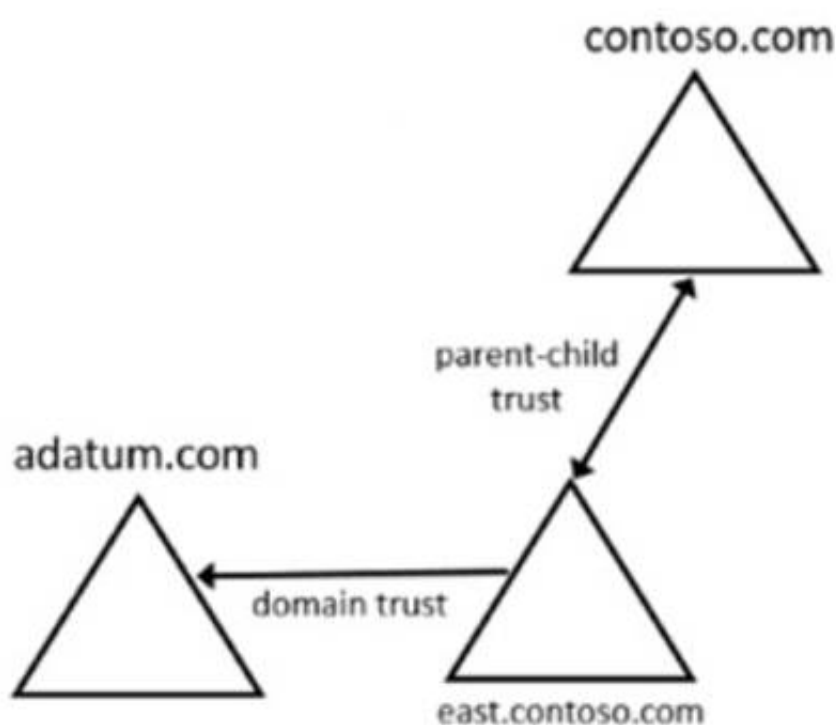

The domain trust has the following configurations:
• Name: adatum.com
      Type: External
⁏ Direction: One-way. outgoing
• Outgoing trust authentication level: Domain-wide authentication

Name	Domain
User1	adatum.com
User2	contoso.com
User3	east.contoso.com

The forests contain the network shares shown in the following table.

Name	In domain
Share1	adatum.com
Share2	contoso.com
Share3	east.contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	○	○
User2 can be assigned permissions for Share1.	○	○
User3 can be assigned permissions for Share1.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Answer Area

| Statements	Yes	No
User1 can be assigned permissions for Share3.	[○]	○
User2 can be assigned permissions for Share1.	○	[○]
User3 can be assigned permissions for Share1.	○	[○]

Topic 4, Labs

NEW QUESTION 6
HOTSPOT - (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com The domain contains a server named Server1 and the users shown In the
following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder 1 are configured as shown in the Permissions exhibit. (Click the Permissions lab.)

Advanced Security Settings for Folder1 — □ ×

Name: D:\Folder1
Owner: Administrators (SERVER1\Administrators) 🛡 Change

Permissions   Share   Auditing   Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

	Type	Principal	Access	Inherited from	Applies to
🔖	Allow	Administrators (SERVER1\Administrators)	Full control	None	This folder, subfolders and files
🔖	Allow	Group1 (ADATUM\Group1)	Read	None	This folder, subfolders and files
🔖	Allow	Group2 (ADATUM\Group2)	Write	None	This folder, subfolders and files

Add   Remove   View

Enable inheritance

☐ Replace all child object permission entries with inheritable permission entries from this object

OK   Cancel   Apply

Folder1 is shared by using the following configurations

Group	Permission
Group1	Allow - Change
Group3	Allow - Full Control

```
Path                : D:\Folder1
Name                : Share1
ShareType           : FileSystemDirectory
FolderEnumerationMode : Unrestricted
```

Answer Area

Statements	Yes	No
User1 can read the files in Share1.	○	○
User3 can delete files in Share1.	○	○
If User2 connects to \\Server1.adatum.com from File Explorer,	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
User1 can read the files in Share1.	☑	○
User3 can delete files in Share1.	☑	○
If User2 connects to \\Server1.adatum.com from File Explorer,	○	☑

NEW QUESTION 7
HOTSPOT - (Topic 3)
You have a Windows Server container host named Server1.
You start the containers on Server1 as shown in the following table.

Name	Image	Uses Hyper-V isolation	Process running on container
Container1	microsoft/iis	No	ProcessA
Container2	microsoft/iis	No	ProcessB
Container3	microsoft/iis	Yes	ProcessC
Container4	microsoft/iis	Yes	ProcessD

You need to validate the status of ProcessA and ProcessC.
Where can you verify that ProcessA and ProcessC are in a running state? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

ProcessA: All the containers and Server1
- Container1 only
- Container1 and Container2 only
- Container1 and Server1 only
- Container1, Container2, and Server1 only
- **All the containers and Server1**

ProcessC: Container3 and Server1 only
- Container3 only
- Container3 and Container4 only
- **Container3 and Server1 only**
- Container3, Container4, and Server1 only
- All the containers and Server1

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

ProcessA: All the containers and Server1

ProcessC: Container3 and Server1 only

NEW QUESTION 8
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains two servers named Server1 and Server2.
Server1 contains a disk named Disk2. Disk2 contains a folder named UserData. UserData is shared to the Domain Users group. Disk2 is configured for deduplication. Server1 is protected by using Azure Backup.
Server1 fails.
You connect Disk2 to Server2.
You need to ensure that you can access all the files on Disk2 as quickly as possible. What should you do?

A. Create a storage pool.
B. Restore files from Azure Backup.
C. Install the File Server Resource Manager server role.
D. Install the Data Deduplication server role.

Answer: C

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview

NEW QUESTION 9
- (Topic 3)
You have an Azure virtual machine named VM1 that has a private IP address only. You configure the Windows Admin Center extension on VM1.
You have an on-premises computer that runs Windows 11. You use the computer for server management.
You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.
What should you configure?

A. an Azure Bastion host on the virtual network that contains VM1.
B. a VPN connection to the virtual network that contains VM1.
C. a network security group 1NSG) rule that allows inbound traffic on port 443.
D. a private endpoint on the virtual network that contains VM1.

Answer: B

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/manage/windows-admin- center/azure/manage-vm

NEW QUESTION 10
- (Topic 3)
You have an Active Directory Domain Services (AD DS) domain. The domain contains three servers named Server 1, Server2, and Server3 that run Windows Server.
You sign in to Server1 by using a domain account and start a remote PowerShell session to Server2. From the remote PowerShell session, you attempt to access a resource on Server3. but access to the resource is denied.
You need to ensure that your credentials are passed from Server1 to Server3. The solution must minimize administrative effort. What should you do?

A. Configure Kerberos constrained delegation.
B. Configure Just Enough Administration (JEA).
C. Configure selective authentication for the domain.
D. Disable the Enforce user logon restrictions policy setting for the domain.

Answer: A

NEW QUESTION 10
HOTSPOT - (Topic 3)
You have an Azure subscription that contains a virtual network named VNet1. Vnet1 contains three subnets named Subnet1, Subnet2, and Subnet3. You deploy a virtual machine that has the following settings:
• Name:VM1
• Subnet: Subnet2
• Network interface name: NIC1
• Operating system: Windows Server 2022
You need to ensure that VM1 can route traffic between Subnet1 and Subnet3. The solution must minimize administrative effort.
What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

From the Azure portal: Associate a routing table with Subnet2.
- Associate a routing table with Subnet2.
- Attach two additional interfaces to VM1.
- Enable IP forwarding for NIC1.

On VM1: Install and configure a network controller.
- Install and configure a network controller.
- Install and configure Routing and Remote Access.
- Run the route add command.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

From the Azure portal: Associate a routing table with Subnet2.
- Associate a routing table with Subnet2.
- Attach two additional interfaces to VM1.
- Enable IP forwarding for NIC1.

On VM1: Install and configure a network controller.
- Install and configure a network controller.
- Install and configure Routing and Remote Access.
- Run the route add command.

NEW QUESTION 15
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.
You open a new branch office that contains only client computers.
You need to ensure that the client computers in the new office are primarily authenticated
by the domain controllers in Site1.
Solution: You create a new subnet object that is associated to Site1. Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 16
- (Topic 3)
Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains three servers that run Windows Server and have the Hyper-V server role installed. Each server has a Switch Embedded Teaming (SET) team.
You need to verify that Remote Direct Memory Access (RDMA) and required Windows Server settings are configured properly on each server to support a failover cluster.
What should you use?

A. the validate-DCB cmdlet
B. Server Manager
C. the Get-NetAdapter cmdlet
D. Failover Cluster Manager

Answer: A

NEW QUESTION 19
HOTSPOT - (Topic 3)
Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated The office in Boston contains the following:
• An Active Directory Domain Services (AD DS) domain controller named DC1.
• A server named Server1 that runs Windows Server and has the File Server role installed The office in Montreal contains 20 client computers that run Windows

10 Montreal does
NOT have any servers.
The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in
\\Server\Apps.

Answer Area

On Server1:
- Enable BranchCache in hosted cache mode.
- Enable BranchCache in Distributed Cache mode.
- Install the BranchCache for network files role service.

On the client computers:
- Enable BranchCache in hosted cache mode.
- Enable BranchCache in Distributed Cache mode.
- Install the BranchCache for network files role service.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

On Server1:
- Enable BranchCache in hosted cache mode.
- Enable BranchCache in Distributed Cache mode.
- Install the BranchCache for network files role service.

On the client computers:
- Enable BranchCache in hosted cache mode.
- Enable BranchCache in Distributed Cache mode.
- Install the BranchCache for network files role service.

NEW QUESTION 24
- (Topic 3)
Your network contains a single-domain Active Directory Domain Services (AD DS) forest named conto.com. The forest contains the servers shown in the following exhibit table.

Name	Description
DC1	Domain controller
Server1	Member server

You plan to install a line-of-business (LOB) application on Server1. The application will install a custom windows services.
A new corporate security policy states that all custom Windows services must run under the context of a group managed service account (gMSA). You deploy a root key.
You need to create, configure, and install the gMSA that will be used by the new application.
Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. On Server1, run the install-ADServiceAccount cmdlet.
B. On DC1, run the New-ADServiceAccount cmdlet.
C. On DC1, run the Set_ADComputer cmdlet.
D. ON DC1, run the Install-ADServiceAccount cmdlet.
E. On Server1, run the Get-ADServiceAccount cmdlet.

Answer: AB

NEW QUESTION 25
HOTSPOT - (Topic 3)
You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com
You have an Azure subscription that contains the resources shown in the following table.
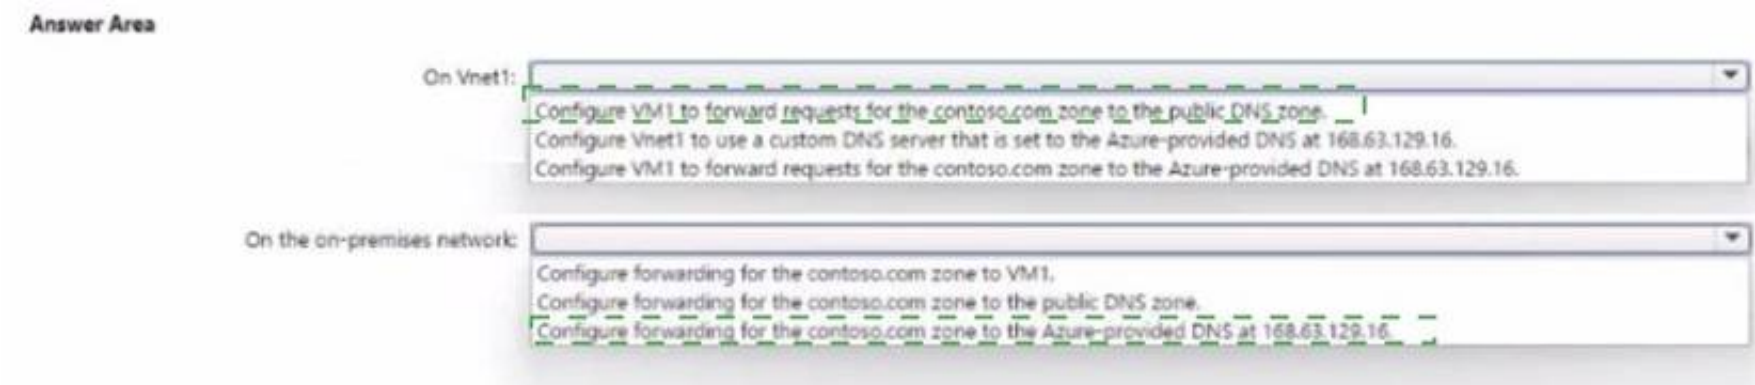

Name	Type	Description
Vnet1	Virtual network	Connects to the on-premises network by using a Site-to-Site VPN
VM1	Virtual machine	Runs Windows Server and has the DNS Server role installed
contoso.com	Private DNS zone	Linked to Vnet1
contoso.com	Public DNS zone	Contains the DNS records of all the platform as a service (PaaS) resources

Answer Area

On Vnet1:
- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:
- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

On Vnet1:
- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:
- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

NEW QUESTION 29
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three domains. Each domain contains 10 domain controllers.
You plan to store a DNS zone in a custom Active Directory partition.
You need to create the Active Directory partition for the zone. The partition must replicate to only four of the domain controllers.
What should you use?

A. DNS Manager
B. New-ADObjett
C. dnscnd.exe
D. Windows Admin Center

Answer: D

NEW QUESTION 30
DRAG DROP - (Topic 3)
Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. Contoso.com contains three child domains named amer.contoso.com, apac.contoso.com, and emea.contoso.com. Fabrikam.com contains a child domain named apac.fabrikam.com. A bidirectional forest trust exists between contoso.com and fabrikam.com.
You need to provide users in the contoso.com forest with access to the resources in the fabrikam.com forest. The solution must meet the following requirements:
• Users in contoso.com must only be added directly to groups in the contoso.com forest.
• Permissions to access the resources in fabrikam.com must only be granted directly to groups in the fabrikam.com forest.
• The number of groups must be minimized.
Which type of groups should you use to organize the users and to assign permissions? To answer, drag the appropriate group types to the correct requirements. Each group type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Group types	Answer Area	
Domain global		Organize users:
Domain local		Assign permissions:
Universal		

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Group types	Answer Area

NEW QUESTION 31
- (Topic 3)
You haw? a server named Host! that has the Hyper-V server role installed. Host! hosts a virtual machine named VM1.
You have a management server named Server! that runs Windows Server. You remotely
manage Host1 from Server1 by using Hyper-V Manager.
You need to ensure that you can access a USB hard drive connected to Server1 when you connect to VM1 by using Virtual Machine Connection.
Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. From the Hyper-V Settings of Host1, select Allow enhanced session mode
B. From Disk Management on Host1. attach a virtual hard disk.
C. From Virtual Machine Connection, switch to a basic session.
D. From Virtual Machine Connection select Show Options and then select the USB hard drive.
E. From Disk Management on Host1, select Rescan Disks

Answer: AD

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/learn-more/use-local-resources-on-hyper-v-virtual-machine-with-vmconnect

NEW QUESTION 32
- (Topic 3)
You have an Azure virtual machine named VM1 that runs Windows Server.
You need to ensure that administrators request access to VM1 before establishing a Remote Desktop connection.
What should you configure?

A. Azure Front Door
B. Microsoft Defender for Cloud
C. Azure AD Privileged Identity Management (PIM)
D. a network security group (NSG)

Answer: B

NEW QUESTION 34
DRAG DROP - (Topic 3)
Your network contains an Active Directory domain named contoso.com. The domain contains group managed service accounts (gMSAs). You have a server
named Server1 that runs Windows Server and is in a workgroup. Server! hosts Windows containers.
You need to ensure that the Windows containers can authenticate to contoso.com. Which three actions should you perform in sequence? To answer, move the appropriate
actions from the list of actions to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 39
HOTSPOT - (Topic 3)
You have a Windows Server container host named Server1 and an Azure subscription. You deploy an Azure container registry named Registry1 to the subscription.
On Server1, you create a container image named image1. You need to store imager in Registry1.
Which command should you run on Server1 ? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 40
- (Topic 3)
You have an Azure virtual machine named VM1 that runs Windows Server. You perform the following actions on VM1:
• Create a folder named Folder1 on volume C
• Create a folder named Folder2 on volume D.
• Add a new data disk to VM1 and create a new volume that is assigned drive letter E.
• Install an app named App1 on volume E. You plan to resize VM1.
Which objects will present after you resize VM1?

A. Folded and Folder2 only
B. Folder1, volume E, and App1 only
C. Folder1 only
D. Folde
E. Folder2. App1, and volume E

Answer: D

NEW QUESTION 43
HOTSPOT - (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server! hosts a domain-based Distributed File System (DFS) Namespace named Files.
The domain contains a tile server named Server2. Seiver2 contains a shared folder named Share1. Share1 contains a subfolder named Folder 1.
In the Files namespace, you create a folder named Folder! that has a target of
\\Server2.contoso.com\Share1\Folder1.
You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace.
How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 48
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain named conioso.com.
You need to identify which server is the PDC emulator for the domain.
Solution: from Active Directory Users and Computers, you right-click contoso.com in the console tree, and then select Operations Master
Does this meet the goal?

A. Yes
B. No

Answer: A

NEW QUESTION 52
- (Topic 3)
You have a server named Server1 that runs Windows Server.
You plan to host applications in Windows containers.
You need to configure Server1 to run containers. What should you install?
A. Windows Admin Center
B. the Windows Subsystem for Linux
C. Doctor
D. Hyper-V

Answer: C

NEW QUESTION 55
HOTSPOT - (Topic 3)
Your company has a main office and 10 branch offices that are connected by using WAN links. The network contains an Active Directory domain.
All users have laptops and regularly travel between offices. You plan to implement BranchCache in the branch offices.
In each branch office, you install a server that runs Windows Server and the BranchCache feature. You register the servers in Active Directory.
You need to configure the laptops to use the local BranchCache server automatically. The solution must minimize administrative effort.
Which two Group Policy settings should you configure? To answer, select the settings in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Setting	State
Turn on BranchCache	Not configured
Set BranchCache Distributed Cache mode	Not configured
Set BranchCache Hosted Cache mode	Not configured
Enable Automatic Hosted Cache Discovery by Service Connection...	Not configured
Configure Hosted Cache Servers	Not configured
Configure BranchCache for network files	Not configured
Set percentage of disk space used for client computer cache	Not configured
Set age for segments in the data cache	Not configured
Configure Client BranchCache Version Support	Not configured

A. Mastered
B. Not Mastered

Answer: A

Explanation:
--> Turn on BranchCache
--> Enable Automatic Hosted Cache Discovery by Service Connection ...

NEW QUESTION 59
- (Topic 3)
You have an Azure virtual machine named Served that runs a network management application. Server1 has the following network configurations:
• Network interface: Nic1
• IP address. 10.1.1.1/24
• Connected to: VnetVSubnet1
You need to connect Server1 to an additional subnet named Vnet1/Subnet2. What should you do?

A. Modify the IP configurations of Nic1.
B. Add a network interface to Server1.
C. Add an IP configuration to Nic1.
D. Create a private endpoint on Subnet2

Answer: D

NEW QUESTION 60
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1 and the servers shown in the following table.

Name	Server role	DHCP scope
Server1	DHCP Server	Scope1, Scope2
Server2	DHCP Server	Scope3, Scope4

You need to ensure that User1 can manage only Scope1 and Scope3. What should you do?

A. Add User1 to the DHCP Administrators group on Server1 and Server2.
B. Implement IP Address Management (IPAM).
C. Add User1 to the DHCP Administrators domain local group.
D. Implement Windows Admin Center and add connections to Server1 and Server2.

Answer: B

NEW QUESTION 62
- (Topic 3)
You have an on-premises network that is connected to an Azure virtual network by using a Site-to-Site VPN. Each network contains a subnet that has the same IP address space. The on-premises subnet contains a virtual machine.
You plan to migrate the virtual machine to the Azure subnet.
You need to migrate the on premises virtual machine to Azure without modifying the IP address. The solution must minim administrative effort.
What should you implement before you perform the migration?

A. Azure Extended Network
B. Azure Virtual Network NAT
C. Azure Application Gateway
D. Azure virtual network peering

Answer: A

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-extended-network

NEW QUESTION 63
HOTSPOT - (Topic 3)
Your network contains two Active Directory Domain Services (AD DS) forests as shown in the following exhibit.

The forests contain the domain controllers shown in the following table.

Name	Domain	Global catalog	Schema master
DC1	adatum.com	Yes	Yes
DC2	adatum.com	No	No
DC3	west.adatum.com	Yes	No
DC4	contoso.com	Yes	Yes

You perform the following actions on DO:
• Create a user named User1.
• Extend the schema with a new attribute named Attributed
To which domain controllers are User1 and Attribute1 replicated? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

User1: DC2 only ▼
| DC2 only |
| DC3 only |
| DC2 and DC3 only |
| DC3 and DC4 only |
| DC2, DC3, and DC4 |

Attribute1: DC2, DC3, and DC4 ▼
| DC2 only |
| DC4 only |
| DC2 and DC3 only |
| DC2, DC3, and DC4 |

Answer:

Answer Area

User1: DC2 only ▼
| DC2 only |
| DC3 only |
| DC2 and DC3 only |
| DC3 and DC4 only |
| DC2, DC3, and DC4 |

Attribute1: DC2, DC3, and DC4 ▼
| DC2 only |
| DC4 only |
| DC2 and DC3 only |
| DC2, DC3, and DC4 |

A. Mastered
B. Not Mastered

Answer: A

NEW QUESTION 67
HOTSPOT - (Topic 3)
You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.
You have a cloud tiering policy that is configured for 30 percent free space and 70 days. Volume E on Server1 is 500 GB.
A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.
Where are File1 and File3 located? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

File1:
| Server1 only |
| The Azure file share only |
| Server1 and the Azure file share |

File3:
| Server1 only |
| The Azure file share only |
| Server1 and the Azure file share |

A. Mastered
B. Not Mastered

Answer: A

Explanation:

File1:

Server1 only
The Azure file share only
Server1 and the Azure file share

File3:

Server1 only
The Azure file share only
Server1 and the Azure file share

NEW QUESTION 71
- (Topic 3)
Your network contains a Active Directory Domain Service (AD DS) forest named contoso.com. The forest root domain contains a server named server1.contoso.com.
A two-way forest trust exists between the contoso.com forest and an AD DS forest named fabrikam.com. The fabrikam.com forest contains 10 child domains.
You need to ensure that only the members of a group named fabrikam\Group1 can authenticate to server1.contoso.com.
What should you do first?

A. Change the trust to a one-way external trust.
B. Add fabrikam\Group1 to the local Users group on server1.contoso.com.
C. Enable SID filtering for the trust.
D. Enable Selective authentication for the trust.

Answer: B

NEW QUESTION 73
HOTSPOT - (Topic 3)
You have a file server named Server1 that runs Windows Server and contains the volumes shown in the following table.

Name	File system
C	NTFS
D	NTFS
E	REFS

On which volumes can you use BitLocker Drive Encryption (BitLocker) and disk quotas? To answer select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer Area

BitLocker:

C only
D only
C and D only
D and E only
C, D, and E

Disk quotas:

C only
D only
C and D only
D and E only
C, D, and E

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

BitLocker:

C only
D only
C and D only
D and E only
C, D, and E

Disk quotas:

C only
D only
C and D only
D and E only
C, D, and E
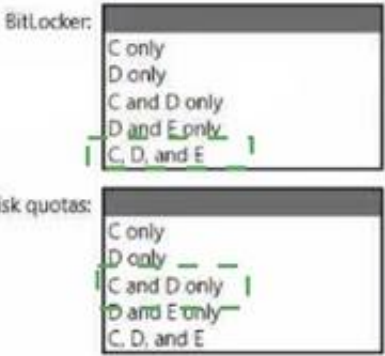

NEW QUESTION 78
DRAG DROP - (Topic 3)
You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs Windows Server. VM1 contains a 128-GB operating system disk.
You need to increase the size of volume C on VM1 to 250 GB.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Resize VM1.
Redeploy VM1.
Stop VM1.
Resize the operating system disk.
Start VM1.
Resize volume C.

Answer Area

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Actions

Resize VM1.
Redeploy VM1.
Stop VM1.
Resize the operating system disk.
Start VM1.
Resize volume C.

Answer Area

Stop VM1.
Resize the operating system disk.
Start VM1.
Resize volume C.

NEW QUESTION 83
- (Topic 3)
You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant
You have several Windows 10 devices that are Azure AD hybrid-joined.
You need to ensure that when users sign in to the devices, they can use Windows Hello for Business.
Which optional feature should you select in Azure AD Connect?

A. Device writeback
B. Group writeback
C. Password writeback
D. Directory extension attribute sync
E. Azure AD app and attribute filtering

Answer: C

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows/security/identity-protection/hello-for-business/hello-hybrid-cert-trust-prereqs

NEW QUESTION 85
- (Topic 3)
Your on-premises network contains an Active Directory domain named contoso.com. You have an Azure AD tenant. You plan to sync contoso.com with the Azure AD tenant by using Azure AD Connect cloud sync. You need to create an account that will be used by Azure AD Connect cloud sync. Which type of account should you create?

A. system-assigned managed identity
B. group managed service account (gMSA)
C. user
D. InetOrgPerson

Answer: C

NEW QUESTION 90
DRAG DROP - (Topic 3)
You have two on-premises servers named Server1 and Servet2 that run Windows Server.
You have an Azure Storage account named storage1 that contains a file share named share'. Server1 syncs with share1 by using Azure File Sync
You need to configure Server2 to sync with share1.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Register Server2 with the Storage Sync Service.	
Add a Storage Sync Service to the Azure subscription.	
On Server2, install the Azure File Sync agent.	
Add a cloud endpoint to the sync group.	
Add a server endpoint to the sync group.	

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Actions	Answer Area
Register Server2 with the Storage Sync Service.	On Server2, install the Azure File Sync agent.
Add a Storage Sync Service to the Azure subscription.	Register Server2 with the Storage Sync Service.
On Server2, install the Azure File Sync agent.	Add a server endpoint to the sync group.
Add a cloud endpoint to the sync group.	
Add a server endpoint to the sync group.	

NEW QUESTION 92
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains the offices shown in the following table.

Location	Number of VPN servers	Number of remote users
Boston	2	30
Dallas	2	50
Seattle	4	100

You need to deploy a Network Policy Server (NPS) named NPS1 to enforce network access policies for all remote connections.
What is the minimum number of RADIUS clients that you should add to NPS1?

A. 1
B. 3
C. 8
D. 180
E. 188

Answer: C

NEW QUESTION 95
- (Topic 3)
You have five tile servers that run Windows Server.
You need to block users from uploading video files that have the .mov extension to shared folders on the file servers. All other types of files must be allowed. The solution must minimize administrative effort.
What should you create?

A. a Dynamic Access Control central access policy
B. a file screen
C. a Dynamic Access Control central access rule
D. a data loss prevention (DLP) policy

Answer: B

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/storage/fsrm/file-screening-management

NEW QUESTION 96
HOTSPOT - (Topic 3)
You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant
You have an on-premises web app named WebApp1 that only supports Kerberos authentication.
You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort.
What should you configure? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 99
DRAG DROP - (Topic 3)
You deploy a single-domain Active Directory Domain Services (AD DS) forest named contoso.com.
You deploy five servers to the domain. You add the servers to a group named iTFarmHosts.
You plan to configure a Network Load Balancing (NIB) cluster named NLBCluster.contoso.com that will contain the five servers.
You need to ensure that the NLB service on the nodes of the cluster can use a group managed service account (gMSA) to authenticate.
Which three PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 102
- (Topic 3)
You have a server named Server1 that runs Windows Server. Server1 has the storage pools shown in the following table.

Name	Number of 7,200-RPM HDDs	Number of 10,000-RPM HDDs	Number of SSDs
Pool1	4	4	None
Pool2	None	2	2
Pool3	8	None	4

You plan to create a virtual disk named VDisk1 that will use storage tiers. Which pools can you use to create VDisk1?

A. Pool2 and Pool3 only
B. Pool 2only
C. Pool only
D. Pool, Pool2, and Pool3
E. Pool1 and Pool2 only
F. Pool1 and Pool3 only
G. Pool3 only

Answer: A

Explanation:
Storage tiering requires both standard HDDs and SSDs. We cannot use Pool1 because it does not have any SSDs.

NEW QUESTION 105
HOTSPOT - (Topic 3)
You have an Azure Active Directory Domain Services (Azure AD DS) domain. You create a new user named Admin1.
You need Admin1 to deploy custom Group Policy settings to all the computers in the domain. The solution must use the principle of least privilege.
What should you include in the solution? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point

Add Admin1 to the following group:

AAD DC Administrators
Domain Admins
Group Policy Creator Owners

Instruct Admin1 to apply the custom
Group Policy settings by:

Creating a new Group Policy Object (GPO) and linking the GPO to the domain
Modifying AADDC Computers GPO
Modifying the default domain GPO

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 106
- (Topic 3)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are planning the deployment of DNS to a new network.
You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.conloso.local and west.contoso.local. All the DNS servers use root hints.
You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.
Solution: On Server2 and Server3, you configure a conditional forwarder for contoso.local. Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2008-r2-and-2008/cc794735(v=ws.10)

NEW QUESTION 110
HOTSPOT - (Topic 3)
You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.
You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	○	○
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	○	○
You can add D:\Data from Server2 as a server endpoint in Group1.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	○	[○]
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	[○]	○
You can add D:\Data from Server2 as a server endpoint in Group1.	[○]	○

NEW QUESTION 114
HOTSPOT - (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com.

Permissions for Share1 ✕

Share Permissions

Group or user names:

Domain Users (ADATUM\Domain Users)

[Add...] [Remove]

Permissions for Domain Users	Allow	Deny
Full Control	☐	☐
Change	☑	☐
Read	☑	☐

[OK] [Cancel] [Apply]

Advanced Security Settings for File1.txt ☐ ✕

Name: E:\Share1\File1.txt

Owner: Administrators (SERVER1\Administrators) Change

Permissions | Share | Auditing | Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from
Allow	Domain Admins (ADATUM\Domain Admins)	Full control	None
Allow	User1 (User1@Adatum.com)	Full control	None
Allow	User2 (User2@Adatum.com)	Read	None
Allow	User3 (User3@Adatum.com)	Write	None

[Add] [Remove] [View]

[Enable inheritance]

[OK] [Cancel] [Apply]

The domain contains a 'He server named Server1 and three users named User1. User2 and User), Server1 contains a shared folder named Share1 tha1 has the following configurations:

```
ShareState          : Online
AvailabilityType    : NonClustered
FolderEnumerationMode : AccessBased
CachingMode         : Manual
LeasingMode         : Full
SmbInstance         : Default
CompressData        : False
ContinuouslyAvailable : False
EncryptData         : False
Name                : Share1
Path                : E:\Share1
ShadowCopy          : False
```

The share permissions for Share1 are configured as shown in the Share Permissions exhibit. (Click the Share Permissions tab.)
Share! contains a file named Filel.txt. The advanced security settings for Filel.txt are configured as shown in the File Permissions exhibit. (Click the File Permissions tab.)
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: f ach correct selection is worth one point.

Answer Area

Statements	Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.	○	○
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	○	○
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 119
DRAG DROP - (Topic 3)
You have a server named Server 1 that runs Windows Server and has the Hyper-V server role installed.
Server1 hosts a virtual machine named VM1. Server1 has an NV Me storage device that is assigned to VM1 by using Discrete Device Assignment.
You need to make the device available to the host.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 123
- (Topic 3)
You have a server named Server1 that runs Windows Server. The disks on Server1 are configured as shown in the following exhibit.
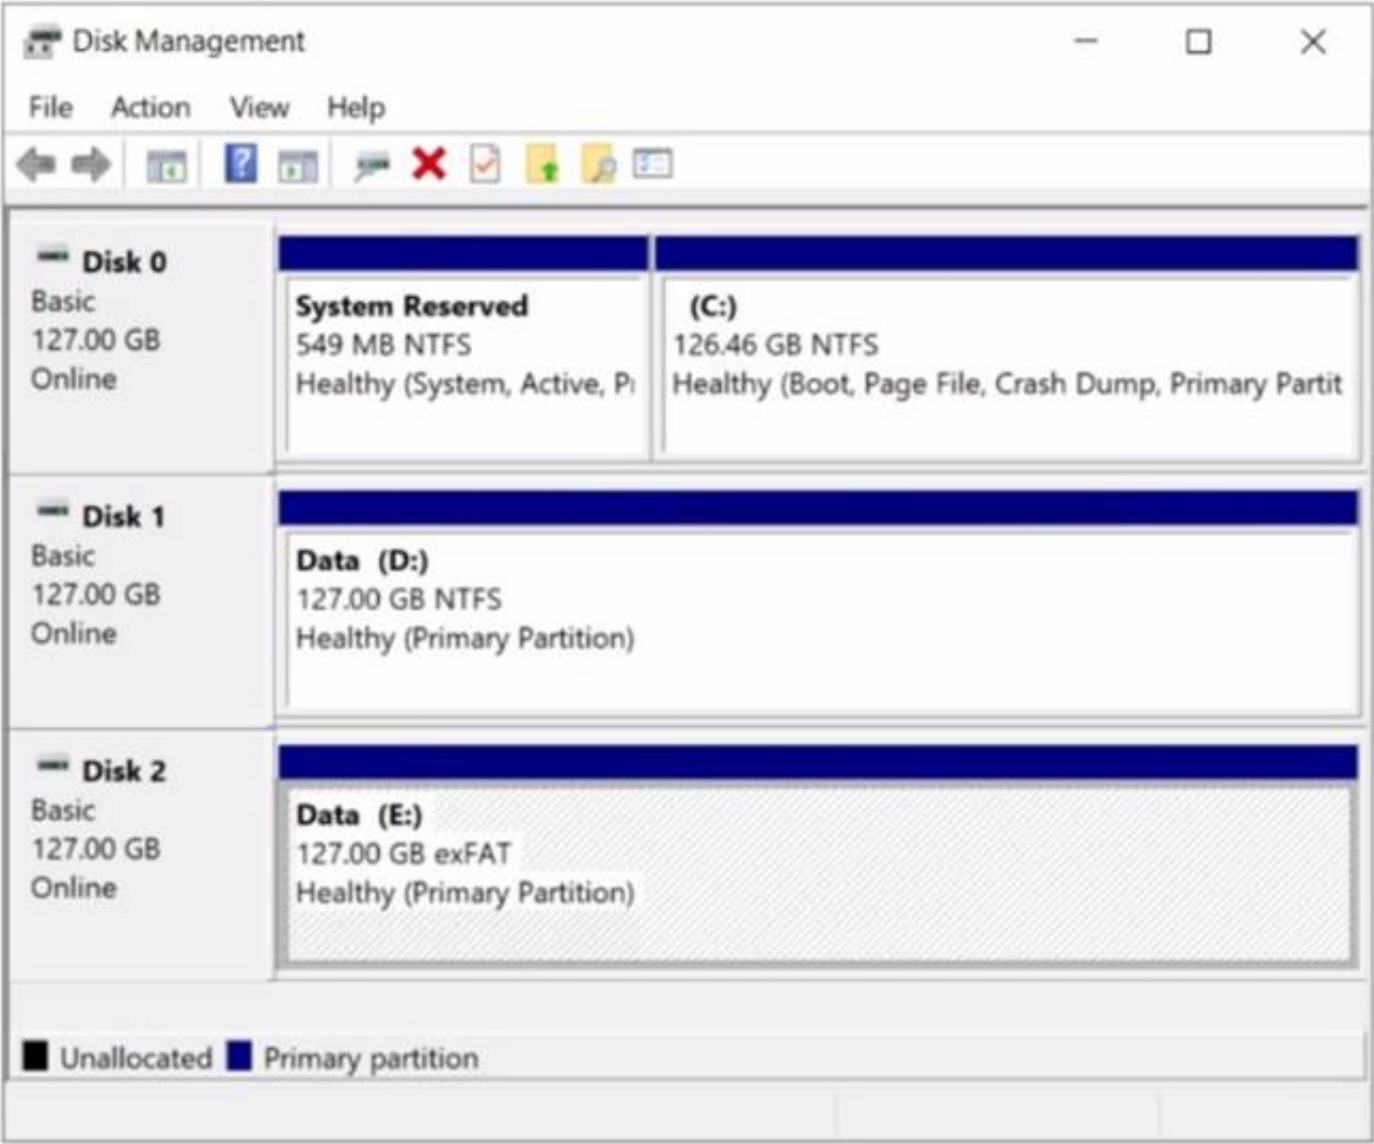

You need to convert volume E to ReFS. The solution must meet the following requirements:
• Preserve the existing data on volume E.
• Minimize administrative effort. What should you do first?

A. Take Disk 2 offline.
B. Back up the data on volume E.
C. Convert Disk 2 to a dynamic disk.
D. Runconvert.exe.

Answer: B

NEW QUESTION 128
HOTSPOT - (Topic 3)
You have a server named Server1 that runs Windows Server Server1 has a just-a-bunch- of-disks (JBOD) enclosure attached.
You plan to create a storage pool on Server1 and a virtual disk that will use a mirror layout. You are considering whether to use a two-way or a three-way mirror layout.
What is the minimum number of disks required for each type of minor layout? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Two-way mirror:

| 1 |
| 2 |
| 3 |
| 4 |
| 5 |
| 6 |

Three-way mirror:

| 1 |
| 2 |
| 3 |
| 4 |
| 5 |
| 6 |

NEW QUESTION 129
DRAG DROP - (Topic 3)
Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.
You plan to provide external access to App1.
You need to implement the Web Application Proxy role service on Server1.
Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Roles
Active Directory Certificate Services
Active Directory Federation Services
Network Policy and Access Services
Remote Access

Answer Area

Role on Server1:

Role on the network:

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Roles
Active Directory Certificate Services
Active Directory Federation Services
Network Policy and Access Services
Remote Access

Answer Area

Role on Server1: Remote Access

Role on the network: Network Policy and Access Services

NEW QUESTION 132
- (Topic 3)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are planning the deployment of DNS to a new network.
You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.
You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.
Solution: You configure Server2 and Server3 to forward DNS requests to 10.0.1.10. Does this meet the goal?

A. Yes
B.

No

Answer: B

NEW QUESTION 135
DRAG DROP - (Topic 3)
You deploy a new Active Directory Domain Services (AD DS) forest named contoso.com. The domain contains three domain controllers named DC1, DC2, and DC3.
You rename Default-First-Site-Name as Site1.
You plan to ship DC1, DC2, and DC3 to datacenters in different locations.
You need to configure replication between DC1, DC2, and DC3 to meet the following requirements:
? Each domain controller must reside in its own Active Directory site.
? The replication schedule between each site must be controlled independently.
? Interruptions to replication must be minimized.
Which three actions should you perform in sequence in the Active Directory Sites and Services console? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Create a connection object between DC1 and DC2.	
Create an additional site link that contains Site1 and Site2.	
Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.	
Create a connection object between DC2 and DC3.	
Remove Site2 from DEFAULTIPSITELINK.	

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Actions

- Create a connection object between DC1 and DC2.
- Create an additional site link that contains Site1 and Site2.
- Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.
- Create a connection object between DC2 and DC3.
- Remove Site2 from DEFAULTIPSITELINK.

Answer Area

- Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.
- Create a connection object between DC1 and DC2.
- Create a connection object between DC2 and DC3.

NEW QUESTION 139
- (Topic 3)
You have an on-premises server named Server! that runs Windows Server. You have an Azure subscription that contains a virtual network named VNet1. You need to connect Server! to VNet1 by using Azure Network Adapter. What should you use?

A. Azure AD Connect
B. Device Manager
C. the Azure portal
D. Windows Admin Center

Answer: D

NEW QUESTION 141
- (Topic 3)
Your network contains an Active Directory Domain Services {AD DS) domain. The domain contains the resources shown in the following table.

Name	Description
CLIENT1	Client computer that runs Windows
DC1	Domain controller
Server1	File server
Server2	File server

You plan to replicate a volume from Server1 to Server2 by using Storage Replica. You need to configure Storage Replica.
Where should you install Windows Admin Center?

A. Server 1
B. CLIENT!
C. DC1
D. Server2

Answer: A

NEW QUESTION 144
HOTSPOT - (Topic 3)
Your network contains three Active Directory Domain Services (AD DS) forest as shown in the following exhibit.

The network contains the users shown in the following table.

Name	Domain
User1	east.contoso.com
User2	fabrikam.com

The network contains the security groups shown in the following table.

Name	Type	Domain
Group1	Domain local	west.adatum.com
Group2	Universal	contoso.com
Group3	Universal	east.contoso.com

For each of the following statements, select Yes if the statement is true, Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can add User1 to Group1.	○	○
You can add User2 to Group3.	○	○
You can grant Group2 permissions to the resources in the fabrikam.com domain.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 145
- (Topic 3)
Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.
You open a new branch office that contains only client computers.
You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.
Solution: You configure the Try Next Closest Site Group Policy Object (GPO) setting in a GPO that is linked to Site1.
Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 146
- (Topic 3)
You have an Active Directory Domain Services (AD DS) domain. The domain contains a member server named Server1 that runs Windows Server.
You need to ensure that you can manage password policies for the domain from Serve1. Which command should you run first on Server1?

A. Install-Windows Feature RSAT-AO-PowerShell
B. Install-Windows Feature 6PHC
C. Install-Windows Feature RSAT-AD-Tool$
D. Install-windows Feature RSAT-AWIMS

Answer: C

NEW QUESTION 150
- (Topic 3)
You have a server named Server1 that runs Windows Server and contains two drives named C and D. Server1 hosts multiple file shares.
You enable Data Deduplication on drive D and select the General purpose file server workload.
You need to minimize the space consumed by files that were recently modified or deleted. What should you do?

A. Run the set-dedupvolume cmdlet and configure the scrubbing job.
B. Run the Set-DedupSchedule Cmdlet and configure a GarbageCollection job.
C. Run the set-Dedupvoiume cmdlet and configure the InputOutputScale settings.
D. Run the Set-DedupSchedule cmdlet and configure the optimization job.

Answer: B

NEW QUESTION 153
HOTSPOT - (Topic 3)
Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

Name	Domain	Description
Server1	contoso.com	Hosts a Windows Admin Center gateway
Server2	fabrikam.com	Hosts resources that will be managed remotely by using Windows Admin Center on Server1

You need to configure resources based constrained delegation so that the users In contoso.com can use Windows Admin Center on Server) to connect to Server?
How should you complete the command? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 158
HOTSPOT - (Topic 2)
You need to configure Azure File Sync to meet the file sharing requirements. What should you do? To answer, select the appropriate options in the answer area.
NOTE Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Minimum number of sync groups to create: ▢
1
2
3
4

Minimum number of Storage Sync Services to create: ▢
1
2
3
4

NEW QUESTION 162
- (Topic 2)
You need to configure the Group Policy settings to ensure that the Azure Virtual Desktop session hosts meet the security requirements. What should you configure?

A. security filtering for the link of GP04
B. security filtering for the link of GPO1
C. loopback processing in GPO4
D. the Enforced property for the link of GP01
E. loopback processing in GPO1
F. the Enforced property for the link of GP04

Answer: C

NEW QUESTION 165
- (Topic 2)
You need to implement a name resolution solution that meets the networking requirements. Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point

A. Create an Azure private DNS zone named corp.fabhkam.com.
B. Create a virtual network link in the coip.fabnkam.c om Azure private DNS zone.
C. Create an Azure DNS zone named corp.fabrikam.com.
D. Configure the DNS Servers settings for Vnet1.
E. Enable autoregistration in the corp.fabnkam.com Azure private DNS zone.
F. On DC3, install the DNS Server role.
G. Configure a conditional forwarder on DC3.

Answer: DF

Explanation:
Virtual machines in an Azure virtual network receive their DNS configuration from the DNS settings configured on the virtual network. You need to configure the Azure virtual network to use DC3 as the DNS server. Then all virtual machines in the virtual network will use DC3 and their DNS server.

NEW QUESTION 169
DRAG DROP - (Topic 2)
You need to meet the security requirements for passwords.
Where should you configure the components for Azure AD Password Protection? lo answer, drag the appropriate components to the correct locations. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE Each correct selection is worth one point.

Locations		Answer Area	
DC1 only		The Azure AD Password Protection DC agent:	Location
All the domain controllers		The Azure AD Password Protection proxy service:	Location
VM1 and VM2		A custom banned password list:	Location
The Azure AD tenant			

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Locations		Answer Area	
DC1 only		The Azure AD Password Protection DC agent:	All the domain controllers
All the domain controllers		The Azure AD Password Protection proxy service:	VM1 and VM2
VM1 and VM2		A custom banned password list:	The Azure AD tenant
The Azure AD tenant			

NEW QUESTION 171
- (Topic 1)
You need to meet the technical requirements for VM2. What should you do?
