NEW QUESTION 1

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 subscription.

You need to review metrics for the following: The daily active users in Microsoft Teams Recent Microsoft service issues

What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Teams daily active users:

<input type="checkbox"/>	Microsoft Secure Score
<input type="checkbox"/>	Adoption Score
<input type="checkbox"/>	Service health
<input type="checkbox"/>	Usage reports

Recent Microsoft service issues:

<input type="checkbox"/>	Microsoft Secure Score
<input type="checkbox"/>	Adoption Score
<input type="checkbox"/>	Service health
<input type="checkbox"/>	Usage reports

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Usage reports

The daily active users in Microsoft Teams

Microsoft 365 Reports in the admin center - Microsoft Teams usage activity

The brand-new Teams usage report gives you an overview of the usage activity in Teams, including the number of active users, channels and messages so you can quickly see how many users across your organization are using Teams to communicate and collaborate. It also includes other Teams specific activities, such as the number of active guests, meetings, and messages.

Box 2: Service Health

Recent Microsoft service issues

You can view the health of your Microsoft services, including Office on the web, Yammer, Microsoft Dynamics CRM, and mobile device management cloud services, on the Service health page in the Microsoft 365 admin center. If you are experiencing problems with a cloud service, you can check the service health to determine whether this is a known issue with a resolution in progress before you call support or spend time troubleshooting.

NEW QUESTION 2

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 E5 subscription.

You create an account for a new security administrator named SecAdmin1.

You need to ensure that SecAdmin1 can manage Office 365 Advanced Threat Protection (ATP) settings and policies for Microsoft Teams, SharePoint, and OneDrive.

Solution: From the Azure Active Directory admin center, you assign SecAdmin1 the Teams Service Administrator role.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

You have a Microsoft 365 subscription.

You discover that some external users accessed center for a Microsoft SharePoint site. You modify the sharePoint sharing policy to prevent sharing, outside your organization. You need to be notified if the SharePoint sharing policy is modified in the future. Solution: From the Security & Compliance admin center you create a threat management policy.

Does this meet the goal?

A. Yes

B. No

Answer: B**NEW QUESTION 5**

- (Topic 6)

You have a Microsoft 365 E5 tenant that contains the resources shown in the following table.

Name	Type
Mailbox1	Microsoft Exchange Online mailbox
Account1	Microsoft OneDrive account
Site1	Microsoft SharePoint Online site
Channel	Microsoft Teams channel

To which resources can you apply a sensitivity label by using an auto-labeling policy?

- A. Mailbox1 and Site1 only
- B. Mailbox1, Account1, and Site1 only
- C. Account1 and Site1 only
- D. Mailbox1, Account1, Site1, and Channel1
- E. Account1, Site1, and Channel1 only

- (Topic 6)

Your company has 10,000 users who access all applications from an on-premises data center.

You plan to create a Microsoft 365 subscription and to migrate data to the cloud. You plan to implement directory synchronization.

User accounts and group accounts must sync to Azure AD successfully. You discover that several user accounts fail to sync to Azure AD.

You need to resolve the issue as quickly as possible. What should you do?

- A. From Active Directory Administrative Center, search for all the users, and then modify the properties of the user accounts.
- B. Run idfix.exe, and then click Edit.
- C. From Windows PowerShell, run the start-AdSyncSyncCycle -PolicyType Delta command.
- D. Run idfix.exe, and then click Complete.

Answer: B**Explanation:**

IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory administrators responsible for directory synchronization with Azure Active Directory.

What will be excluded from the export?

- A. a 10-MB XLSX file
- B. a 5-MB MP3 file
- C. a 5-KB RTF file
- D. an 80-MB PPTX file

Answer: B

Explanation:

Unrecognized file formats are excluded from the search.

Certain types of files, such as Bitmap or MP3 files, don't contain content that can be indexed. As a result, the search indexing servers in Exchange and SharePoint don't perform full-text indexing on these types of files. These types of files are considered to be unsupported file types.

NEW QUESTION 36

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Endpoint and contains the devices shown in the following table.

Name	Operating system	Tag
Device1	Windows 10	Inventory1
Computer1	Windows 10	Inventory2
Device3	Android	Inventory3

Defender for Endpoint has the device groups shown in the following table.

Rank	Name	Matching rule
1	Group1	Tag Contains Inventory And OS in Android
2	Group2	Name Starts with Device And Tag Contains Inventory
Last	Ungrouped devices (default)	<i>Not applicable</i>

You create an incident email notification rule configured as shown in the following table.

Setting	Value
Name	Rule1
Alert severity	Low
Device group scope	Group1, Group2
Recipient email address	User1@contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

If a high-severity incident is triggered for Device1, an incident email notification will be sent.

Yes

☒

No

☐

If a low-severity incident is triggered for Computer1, an incident notification email will be sent.

☐
☐

If a low-severity incident is triggered for Device3, an incident notification email will be sent.

☐
☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No

Device1 is in Group2 as Name starts with Device and Tag contains Inventory. However, the Group2 has alert severity low.

Box 2: No

Computer1 does not belong to either Group1 or Group2

Box 3: Yes

Device3 belongs to both Group1 and Group2.

Note: Understanding alert severity

Microsoft Defender Antivirus and Defender for Endpoint alert severities are different because they represent different scopes.

The Microsoft Defender Antivirus threat severity represents the absolute severity of the detected threat (malware), and is assigned based on the potential risk to the individual device, if infected.

User3	Global Administrator
User4	None

You add another user named User5 to the User Administrator role. You need to identify which two management tasks User5 can perform.

Which two tasks should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Delete User2 and User4 only.
- B. Reset the password of User4 only
- C. Reset the password of any user in Azure AD.
- D. Delete User1, User2, and User4 only.
- E. Reset the password of User2 and User4 only.
- F. Delete any user in Azure AD.

Answer: AE

Explanation:

Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below).

Only on users who are non-admins or in any of the following limited admin roles:

- Directory Readers
- Guest Inviter
- Helpdesk Administrator
- Message Center Reader
- Reports Reader

NEW QUESTION 58

- (Topic 6)

You have a Microsoft 365 subscription.

You configure a data loss prevention (DLP) policy.

You discover that users are incorrectly marking content as false positive and bypassing the DLP policy.

You need to prevent the users from bypassing the DLP policy. What should you configure?

- A. actions
- B. incident reports
- C. exceptions
- D. user overrides

Answer: D

Explanation:

A DLP policy can be configured to allow users to override a policy tip and report a false positive.

You can educate your users about DLP policies and help them remain compliant without blocking their work. For example, if a user tries to share a document

containing sensitive information, a DLP policy can both send them an email notification and show them a policy tip in the context of the document library that allows them to override the policy if they have a business justification. The same policy tips also appear in Outlook on the web, Outlook, Excel, PowerPoint, and Word. If you find that users are incorrectly marking content as false positive and bypassing the DLP policy, you can configure the policy to not allow user overrides.

NEW QUESTION 65

- (Topic 6)
 You have a Microsoft 365 subscription.
 You plan to implement Microsoft Purview Privileged Access Management. Which Microsoft Office 365 workloads support privileged access?

- A. Microsoft Exchange Online only
- B. Microsoft Teams only
- C. Microsoft Exchange Online and SharePoint Online only
- D. Microsoft Teams and SharePoint Online only
- E. Microsoft Teams, Exchange Online, and SharePoint Online

Answer: A

Explanation:
 Privileged access management
 Having standing access by some users to sensitive information or critical network configuration settings in Microsoft Exchange Online is a potential pathway for compromised accounts or internal threat activities. Microsoft Purview Privileged Access Management helps protect your organization from breaches and helps to meet compliance best practices by limiting standing access to sensitive data or access to critical configuration settings. Instead of administrators having constant access, just-in-time access rules are implemented for tasks that need elevated permissions. Enabling privileged access management for Exchange Online in Microsoft 365 allows your organization to operate with zero standing privileges and provide a layer of defense against standing administrative access vulnerabilities.
 Note: When will privileged access support Office 365 workloads beyond Exchange? Privileged access management will be available in other Office 365 workloads soon.

Answer: B

NEW QUESTION 99

- (Topic 6)

You have a Microsoft 365 E5 subscription.

Users access Microsoft 365 from both their laptop and a corporate Virtual Desktop Infrastructure (VDI) solution.

From Azure AD Identity Protection, you enable a sign-in risk policy.

Users report that when they use the VDI solution, they are regularly blocked when they attempt to access Microsoft 365.

What should you configure?

- A. the Tenant restrictions settings in Azure AD
- B. a trusted location
- C. a Conditional Access policy exclusion
- D. the Microsoft 365 network connectivity settings

Answer: B

Explanation:

There are two types of risk policies in Azure Active Directory (Azure AD) Conditional Access you can set up to automate the response to risks and allow users to self-remediate when risk is detected:

Sign-in risk policy User risk policy

Configured trusted network locations are used by Identity Protection in some risk detections to reduce false positives.

NEW QUESTION 106

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 E5 subscription.

From Azure AD Identity Protection on August 1, you configure a Multifactor authentication registration policy that has the following settings:

? Assignments: All users

? Controls: Require Azure AD multifactor authentication registration

? Enforce Policy: On

? On August 3, you create two users named User1 and User2.

Users authenticate by using Azure Multi-Factor Authentication (MFA) for the first time on the dates shown in the following table.

User	Date
User1	August 5
User2	August 7

By which dates will User1 and User2 be forced to complete their Azure MFA registration? To answer, select the appropriate options in the answer area.

September 3

September 5

User2:

▼

August 8

August 17

August 19

August 21

September 7

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: August 19

Note: Security defaults will trigger a 14 day grace period for registration after a user's first login and security defaults being enabled. After 14 days users will be required to register for MFA and will not be able to skip.

Conditional Access by itself without Azure Identity Protection does not allow for the 14 day grace period. Identity Protection includes the registration policy that allows registration on its own with no apps assigned to the policy. If a Conditional Access policy requires Multi- Factor Authentication, then the user must be able to pass that MFA request.

Box 2: August 21

NEW QUESTION 112

- (Topic 6)

You have a new Microsoft 365 E5 tenant. You need to enable an alert policy that will be triggered when an elevation of Microsoft Exchange Online administrative privileges is detected. What should you do first?

- A. Enable auditing.
- B. Enable Microsoft 365 usage analytics.
- C. Create an Insider risk management policy.
- D. Create a communication compliance policy.

Answer: A

Explanation:

Microsoft Purview auditing solutions provide an integrated solution to help organizations effectively respond to security events, forensic investigations, internal investigations, and compliance obligations. Thousands of user and admin operations performed in dozens of Microsoft 365 services and solutions are captured, recorded, and retained in your organization's unified audit log. Audit records for these events are searchable by security ops, IT admins, insider risk teams, and compliance and legal investigators in your organization. This capability provides visibility into the activities performed across your Microsoft 365 organization.

Note: Permissions alert policies

Example: Elevation of Exchange admin privilege

Generates an alert when someone is assigned administrative permissions in your Exchange Online organization. For example, when a user is added to the Organization Management role group in Exchange Online.

NEW QUESTION 114

- (Topic 6)

Your network contains an on-premises Active Directory domain named contoso.local. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates an Azure AD tenant named contoso.onmicrosoft.com.

You plan to install Azure AD Connect on a member server and implement pass-through authentication.

You need to prepare the environment for the planned implementation of pass-through authentication.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From a domain controller install an Authentication Agent
- B. From the Microsoft Entra admin center, configure an authentication method.
- C. From Active Director,' Domains and Trusts add a UPN suffix
- D. Modify the email address attribute for each user account.
- E. From the Microsoft Entra admin center, add a custom domain name.
- F. Modify the User logon name for each user account.

Answer: ABE

Explanation:

Deploy Azure AD Pass-through Authentication Step 1: Check the prerequisites

Ensure that the following prerequisites are in place. In the Entra admin center

* 1. Create a cloud-only Hybrid Identity Administrator account or a Hybrid Identity administrator account on your Azure AD tenant. This way, you can manage the configuration of your tenant should your on-premises services fail or become unavailable.

(E) 2. Add one or more custom domain names to your Azure AD tenant. Your users can sign in with one of these domain names.

(A) In your on-premises environment

* 1. Identify a server running Windows Server 2016 or later to run Azure AD Connect. If not enabled already, enable TLS 1.2 on the server. Add the server to the same Active Directory forest as the users whose passwords you need to validate. It should be noted that installation of Pass-Through Authentication agent on Windows Server Core versions is not supported.

* 2. Install the latest version of Azure AD Connect on the server identified in the preceding step. If you already have Azure AD Connect running, ensure that the version is supported.

* 3. Identify one or more additional servers (running Windows Server 2016 or later, with TLS 1.2 enabled) where you can run standalone Authentication Agents. These additional servers are needed to ensure the high availability of requests to sign in. Add the servers to the same Active Directory forest as the users whose passwords you need to validate.

* 4. Etc.

(B) Step 2: Enable the feature

Enable Pass-through Authentication through Azure AD Connect.

If you're installing Azure AD Connect for the first time, choose the custom installation path. At the User sign-in page, choose Pass-through Authentication as the Sign On method. On successful completion, a Pass-through Authentication Agent is installed on the same server as Azure AD Connect. In addition, the Pass-through Authentication feature is enabled on your tenant.

Incorrect:

Not C: From Active Directory Domains and Trusts, add a UPN suffix Not D. Modify the email address attribute for each user account. Not F. Modify the User logon name for each user account.

NEW QUESTION 152

- (Topic 4)

You need to ensure that all the sales department users can authenticate successfully during Project1 and Project2.
Which authentication strategy should you implement for the pilot projects?

- A. pass-through authentication
- B. pass-through authentication and seamless SSO
- C. password hash synchronization and seamless SSO
- D. password hash synchronization

Answer: C

Explanation:

Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.

Project2: After the successful completion of Project1, Microsoft Teams & Skype for Business will be enabled in Microsoft 365 for the sales department users.

After the planned migration to Microsoft 365, all users must be signed in to on-premises and cloud-based applications automatically.

Fabrikam does NOT plan to implement identity federation.

After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable password hash synchronization to enable the users to continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable SSO to enable all users to be signed in to on-premises and cloud-based applications automatically.

NEW QUESTION 178

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 E5 subscription that contains the groups shown in the following table.

Name	Type
Group1	Security
Group2	Mail-enabled security
Group3	Microsoft 365
Group4	Distribution

All the groups are deleted.

Which groups can be restored, and what is the retention period? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Groups that can be restored:

Group3 only

Group1 and Group2 only

Group2 and Group4 only

Group1, Group2, and Group3 only

Group1, Group2, Group3, and Group4

Retention period:

24 hours

7 days

14 days

30 days

90 days

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Group3 only

Box 2: 30 days

If you've deleted a group, it will be retained for 30 days by default. This 30-day period is considered a "soft-delete" because you can still restore the group. After 30 days, the group and its associated contents are permanently deleted and cannot be restored.

NEW QUESTION 192

- (Topic 6)

Your network contains an Active Directory forest named contoso.local. You purchase a Microsoft 365 subscription.

You plan to move to Microsoft 365 and to implement a hybrid deployment solution for the next 12 months.

You need to prepare for the planned move to Microsoft 365.

What is the best action to perform before you implement directory synchronization? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Purchase a third-party X.509 certificate.
- B. Create an external forest trust.
- C. Rename the Active Directory forest.
- D. Purchase a custom domain name.

Answer: D

Explanation:

The first thing you need to do before you implement directory synchronization is to purchase a custom domain name. This could be the domain name that you use in your on- premise Active Directory if it's a routable domain name, for example, contoso.com.

If you use a non-routable domain name in your Active Directory, for example contoso.local, you'll need to add the routable domain name as a UPN suffix in Active Directory.

Incorrect:

Not C: No need to rename the Active Directory forest. As we use a non-routable domain name contoso.local, we just need to add the routable domain name as a UPN suffix in Active Directory.
