NEW QUESTION 6

- (Topic 5)

You have a Microsoft 365 E3 subscription that contains 500 users. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to generate a report that identifies which documents the users copied from Microsoft Teams to USB devices.

What should you do first?

- A. Onboard the Windows 10 computers to Endpoint data loss prevention (Endpoint DLP).
- B. Assign the Microsoft 365 ES compliance add-on to each user.
- C. Create a custom data loss prevention (DLP) policy.
- D. Assign the Enterprise Mobility + Security ES add-on to each user.

Answer: B

Explanation:

According to the Microsoft documentation¹, to generate a report that identifies which documents the users copied from Teams to USB devices, you need to use advanced hunting on Microsoft Defender ATP. Advanced hunting lets you run queries to find threat activity involving USB devices, such as mounting and unmounting of USB drives or copying of files².

To use advanced hunting, you need to have one of the following roles:

- ? Security administrator
- ? Security reader
- ? Security operator
- ? Global administrator

The Groups Administrator role does not have access to advanced hunting or Microsoft Defender ATP.

Therefore, based on this information, the correct answer is B. Assign the Microsoft 365 E5 compliance add-on to each user. This add-on includes Microsoft Defender ATP and allows you to use advanced hunting features³. Alternatively, you can request one of the roles that have access to advanced hunting, such as Security administrator or Global administrator.

Task 1

Your company is opening a branch office in Miami. The office uses a network range of 10.10.10.0/24. You need to restrict Teams bandwidth to 1.000 Kpbs for all the users working at the Miami office. The solution must NOT affect other offices.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- To restrict Teams bandwidth by network range, you can use the Network Roaming Policy feature¹. This feature allows you to define different media bit rate settings for different network locations based on the IP address ranges. Here are the steps to accomplish your task:
- ? Create a new network roaming policy with the desired media bit rate settings. For example, you can use the following PowerShell cmdlet to create a policy named "MiamiPolicy" with a maximum bit rate of 1000 Kbps for audio and video: New-CsTeamsNetworkRoamingPolicy -Identity "MiamiPolicy" -MaxMediaBitRateKb 1000
 - ? Assign the network roaming policy to the network range of the Miami office. You can use the following PowerShell cmdlet to assign the policy to the 10.10.10.0/24 network range: New-CsTeamsNetworkRoamingPolicyAssignment -PolicyName "MiamiPolicy" - IPAddressRange "10.10.10.0/24"
 - ? Verify that the policy is applied correctly by using the Get- CsTeamsNetworkRoamingPolicyAssignment cmdlet. You should see something like this:
 Identity : 10.10.10.0/24 PolicyName : MiamiPolicy
 IPAddressRange : 10.10.10.0/24 EffectiveTime : 8/1/2023 1:18:24 PM LastUpdateTime : 8/1/2023 1:18:24 PM
 LastUpdateBy : admin@XXXXXXXXXXXX.onmicrosoft.com

NEW QUESTION 160

- (Topic 5)

You have a Microsoft 365 subscription. You plan to implement Microsoft Teams.

You need to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion

You install the Network Testing Companion module on a local Windows 10 device. Which additional software should you install to perform the tests?

- A. the Microsoft Teams desktop client
- B. Network Assessment Tool
- C. Windows Assessment Toolkit
- D. Windows Performance Analyzer (WPA)

Answer: B

Explanation:

According to the Microsoft documentation¹, the Network Testing Companion is a PowerShell module that allows you to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion. The Network Testing Companion module requires the following software to be installed on the local Windows 10 device:

- ? PowerShell 5.1 or later
- ? .NET Framework 4.7.2 or later
- ? Microsoft Teams Network Assessment Tool

The Microsoft Teams Network Assessment Tool is a tool that tests the connectivity to various Teams servers deployed in the Microsoft Azure network. It measures network performance by streaming packets to the nearest edge site and back for a configurable amount of time².

Therefore, based on this information, the correct answer is B. Network Assessment Tool. This tool is required to perform network quality and connectivity tests by using the Network Testing Companion module. The other options are either not related to network testing (the Microsoft Teams desktop client and Windows Performance Analyzer) or not required for the Network Testing Companion module (Windows Assessment Toolkit).
