

# Microsoft

## Exam Questions AZ-800

Administering Windows Server Hybrid Core Infrastructure

### NEW QUESTION 1

SIMULATION - (Topic 4)

Task 3

You need to configure SRV1 as a DNS server. SRV1 must be able resolve names from the contoso.com domain by using DC1. All other names must be resolved by using the root hint servers.

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

One possible solution to configure SRV1 as a DNS server that can resolve names from the contoso.com domain by using DC1 and all other names by using the root hint servers is to use conditional forwarding. Conditional forwarding allows a DNS server to forward queries for a specific domain name to another DNS server, while using the normal forwarding or root hint servers for other queries. Here are the steps to configure conditional forwarding on SRV1:

? On SRV1, open DNS Manager from the Administrative Tools menu or by typing dnsmgmt.msc in the Run box.

? In the left pane, right-click on Conditional Forwarders and select New Conditional Forwarder.

? In the New Conditional Forwarder dialog box, enter contoso.com as the DNS Domain name.

? In the IP addresses of the master servers box, enter the IP address of DC1, which is the DNS server for the contoso.com domain. You can also click on Resolve to verify the name resolution of DC1.

? Optionally, you can check the box Store this conditional forwarder in Active Directory, and replicate it as follows if you want to store and replicate the conditional forwarder in AD DS. You can also select the replication scope from the drop-down list.

? Click OK to create the conditional forwarder.

Now, SRV1 will forward any queries for the contoso.com domain to DC1, and use the root hint servers for any other queries. You can test the name resolution by using

the nslookup command on SRV1 or another computer that uses SRV1 as its DNS server. For example, you can run the following commands:

```
nslookup www.contoso.com
nslookup www.microsoft.com
```

The first command should return the IP address of www.contoso.com from DC1, and the second command should return the IP address of www.microsoft.com from a root hint server.

### NEW QUESTION 2

SIMULATION - (Topic 4)

Task 4

You need to register SRV1 to sync Azure file shares The registration must use the 34646045 Storage Sync Service.

The required source files are located in a folder named \\dc1.contoso.com\install.

You do NOT need to configure file share synchronization at this time and you do NOT need to update the agent.

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

One possible solution to register SRV1 to sync Azure file shares using the 34646045 Storage Sync Service is to use the Register-AzStorageSyncServer cmdlet from the Az.StorageSync module. This cmdlet establishes a trust relationship between the server

and the Storage Sync Service, which is required for creating server endpoints and syncing files. Here are the steps to register SRV1

using the cmdlet:

? On SRV1, open PowerShell as an administrator and run the following command to

install the Az.StorageSync module if it is not already installed: Install-Module -Name Az.StorageSync

? Run the following command to import the Az.StorageSync module:

```
Import-Module -Name Az.StorageSync
```

? Run the following command to sign in to your Azure account and select the subscription that contains the 34646045 Storage Sync Service:

```
Connect-AzAccount
```

```
Select-AzSubscription -SubscriptionId <your-subscription-id>
```

? Run the following command to register SRV1 with the 34646045 Storage Sync Service. You need to specify the resource group name and the Storage Sync Service name as parameters:

```
Register-AzStorageSyncServer -ResourceGroupName <your-resource-group-name> -StorageSyncServiceName 34646045
```

? Wait for the registration to complete. You can verify the registration status by

checking the Registered servers tab on the Azure portal or by running the following command:

```
Get-AzStorageSyncServer -ResourceGroupName <your-resource-group-name> -StorageSyncServiceName 34646045
```

Now, SRV1 is registered with the 34646045 Storage Sync Service and ready to sync Azure file shares. You can create server endpoints on SRV1 and cloud endpoints on the Azure file shares to define the sync topology.

### NEW QUESTION 3

HOTSPOT - (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com and the servers shown in the following table.

Name	Domain	Description
DC1	contoso.com	Has the schema master, infrastructure master, and domain naming master roles
DC2	east.contoso.com	Has the PDC emulator and RID master roles and is a global catalog server
Server1	contoso.com	Has the File Server, DFS Namespaces, and DFS Replication server roles

You need to create a folder for the Central Store to manage Group Policy template files for the entire forest. What should you name the folder, and on which server should you create the folder? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Name:

PolicyDefinitions

CentralDefinitions

PolicyDefinitions

TemplateDefinitions

These are the selections for Name:

Server:

Server1 only

DC1 only

DC2 only

Server1 only

DC1 and DC2 only

DC1, DC2, and Server1

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Name:

PolicyDefinitions

CentralDefinitions

PolicyDefinitions

TemplateDefinitions

These are the selections for Name:

Server:

Server1 only

DC1 only

DC2 only

Server1 only

DC1 and DC2 only

DC1, DC2, and Server1

NEW QUESTION 4

HOTSPOT - (Topic 3)

You have an Active Directory Domain Services (AD DS) domain that contains a group named Group1. You need to create a group managed service account (gMSA) named Account1. The solution must ensure that Group1 can use Account1. How should you complete the script? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

Answer Area

New-ADServiceAccount

Add-ADComputerServiceAccount

Install-ADServiceAccount

New-ADObject

New-ADServiceAccount

"Account1" -DNSHostName "website.contoso.com" -

-PrincipalsAllowedToDelegateToAccount

AuthenticationPolicy

-Instance

-PrincipalsAllowedToDelegateToAccount

-PrincipalsAllowedToRetrieveManagedPassword

"Group1"

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

New-ADServiceAccount

Add-ADComputerServiceAccount

Install-ADServiceAccount

New-ADObject

New-ADServiceAccount

"Account1" -DNSHostName "website.contoso.com" -

-PrincipalsAllowedToDelegateToAccount

AuthenticationPolicy

-PrincipalsAllowedToDelegateToAccount

-PrincipalsAllowedToRetrieveManagedPassword

"Group1"

NEW QUESTION 5

- (Topic 3)

You have a server that runs Windows Server and contains a shared folder named UserData. You need to limit the amount of storage space that each user can consume in UserData. What should you use?

- A. Storage Spaces
- B. Work Folders
- C. Distributed File System (DFS) Namespaces
- D. File Server Resource Manager (FSRM)

Answer: D

Explanation:

Reference:  
<https://docs.microsoft.com/en-us/windows-server/storage/fsrm/fsrm-overview>

#### NEW QUESTION 6

- (Topic 3)

You have an Azure virtual machine named VM1 that has a private IP address only. You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management.

You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

- A. an Azure Bastion host on the virtual network that contains VM1.
- B. a VPN connection to the virtual network that contains VM1.
- C. a network security group (NSG) rule that allows inbound traffic on port 443.
- D. a private endpoint on the virtual network that contains VM1.

**Answer: B**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/manage-vm>

#### NEW QUESTION 7

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains 10 servers that run Windows Server. The servers have static IP addresses.

You plan to use DHCP to assign IP addresses to the servers.

You need to ensure that each server always receives the same IP address.

Which type of identifier should you use to create a DHCP reservation for each server?

- A. universally unique identifier (UUID)
- B. fully qualified domain name (FQDN)
- C. NetBIOS name
- D. MAC address

**Answer: D**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/powershell/module/dhcpserver/add-dhcpserverv4reservation?view=windowsserver2022-ps>

#### NEW QUESTION 8

- (Topic 3)

You have an Azure virtual machine named VM1 that runs Windows Server and has the following configurations:

? Size: D2s\_v4

? Operating system disk: 127-GiB standard SSD

? Data disk 128-GiB standard SSD

? Virtual machine generation: Gen 2

You plan to perform the following changes to VM1:

? Change the virtual machine size to D4s\_v4.

? Detach the data disk.

? Add a new standard SSD.

Which changes require downtime for VM1?

- A. Detaching the data disk only and adding a new standard SSD.
- B. Detaching the data disk only.
- C. Changing the virtual machine size only.
- D. Adding a new standard SSD only.

**Answer: C**

#### Explanation:

Data disks can be added and detached without requiring downtime. Changing the VM size requires the VM to be restarted.

#### NEW QUESTION 9

DRAG DROP - (Topic 3)

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.

You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

? Ensures that a user named User1 can perform the RODC installation on Server1

? Ensures that you can control the AD DS replication schedule to the Server1

? Ensures that Server1 is in a new site named RemoteSite1

? Uses the principle of least privilege

Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Create a site and a subnet.

Create a site link.

Pre-create an RODC account.

Add User1 to the Contoso\Administrators group.

Answer Area

>

<

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1.  
We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.

Box 2.  
When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.

Box3.  
User1 can connect the RODC to the prestaged account by running the AD DS installation wizard.

NEW QUESTION 10

- (Topic 3)  
Your network contains a single-domain Active Directory Domain Services (AD DS) forest named conto.com. The forest contains the servers shown in the following exhibit table.

Name	Description
DC1	Domain controller
Server1	Member server

You plan to install a line-of-business (LOB) application on Server1. The application will install a custom windows services. A new corporate security policy states that all custom Windows services must run under the context of a group managed service account (gMSA). You deploy a root key. You need to create, configure, and install the gMSA that will be used by the new application. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. On Server1, run the install-ADServiceAccount cmdlet.
- B. On DC1, run the New-ADServiceAccount cmdlet.
- C. On DC1, run the Set\_ADComputer cmdlet.
- D. ON DC1, run the Install-ADServiceAccount cmdlet.
- E. On Server1, run the Get-ADServiceAccount cmdlet.

Answer: AB

NEW QUESTION 10

HOTSPOT - (Topic 3)  
You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com. You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
Vnet1	Virtual network	Connects to the on-premises network by using a Site-to-Site VPN
VM1	Virtual machine	Runs Windows Server and has the DNS Server role installed
contoso.com	Private DNS zone	Linked to Vnet1
contoso.com	Public DNS zone	Contains the DNS records of all the platform as a service (PaaS) resources

Answer Area

On Vnet1:

Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.  
Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.  
Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

Configure forwarding for the contoso.com zone to VM1.  
Configure forwarding for the contoso.com zone to the public DNS zone.  
Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

On Vnet1:

Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.  
Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.63.129.16.  
Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

On the on-premises network:

Configure forwarding for the contoso.com zone to VM1.  
Configure forwarding for the contoso.com zone to the public DNS zone.  
Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.63.129.16.

NEW QUESTION 12

HOTSPOT - (Topic 3)

You have a server named Server1 that runs Windows Server. Server1 has a single network interface and the Hyper-V virtual switches shown in the following exhibit.

Virtual Switch Manager for SERVER1

Virtual Switches

- New virtual network switch
- VSwitch1  
Private virtual switch
- VSwitch2  
Internal only
- VSwitch3  
Microsoft Hyper-V Network Adapter

Global Network Settings

MAC Address Range  
00-15-5D-01-32-00 to 00-15-5D-0...

MAC Address Range

You can define the range of media access control (MAC) addresses that can be assigned dynamically to virtual network adapters.

Minimum: 00 - 15 - 5D - 01 - 32 - 00

Maximum: 00 - 15 - 5D - 01 - 32 - FF

Changing this setting does not affect network adapters that have already been configured. To apply a new setting to an existing network adapter, recreate the network adapter by removing it and adding it again.

OK Cancel Apply

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

Answer Area

On Server1, you can create additional [answer choice].

- private and internal virtual switches only
- internal virtual switches only
- private virtual switches only
- private and internal virtual switches only
- private, internal, and external virtual switches

Server1 can access network shares on virtual machines that are connected to [answer choice].

- VSwitch1, VSwitch2, or VSwitch3
- VSwitch2 only
- VSwitch3 only
- VSwitch1 or VSwitch2 only
- VSwitch2 or VSwitch3 only
- VSwitch1, VSwitch2, or VSwitch3

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

On Server1, you can create additional [answer choice].

- private and internal virtual switches only
- internal virtual switches only
- private virtual switches only
- private and internal virtual switches only
- private, internal, and external virtual switches

Server1 can access network shares on virtual machines that are connected to [answer choice].

- VSwitch1, VSwitch2, or VSwitch3
- VSwitch2 only
- VSwitch3 only
- VSwitch1 or VSwitch2 only
- VSwitch2 or VSwitch3 only
- VSwitch1, VSwitch2, or VSwitch3

**NEW QUESTION 13**

HOTSPOT - (Topic 3)

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Configure on the Azure virtual machine:

- Boot diagnostics with a custom storage account
- Operating system guest diagnostics
- A system-assigned managed identity

Assign the following role to User1:

- Virtual Machine Contributor
- Virtual Machine Administrator Login
- Virtual Machine User Login

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

Configure on the Azure virtual machine:

- Boot diagnostics with a custom storage account
- Operating system guest diagnostics
- A system-assigned managed identity

Assign the following role to User1:

- Virtual Machine Contributor
- Virtual Machine Administrator Login
- Virtual Machine User Login

**NEW QUESTION 16**

- (Topic 3)

You have an on-premises server named Server 1 that runs Windows Server. You have an Azure subscription that contains a virtual network named VNet1. You need to connect Server 1 to VNet1 by using Azure Network Adapter. What should you use?

- A. the Azure portal  
B. Azure AD Connect  
C. Device Manager  
D. Windows Admin Center

**Answer:** B

**NEW QUESTION 21**

- (Topic 3)

You have an Azure virtual machine named VM1 that runs Windows Server.

You need to ensure that administrators request access to VM1 before establishing a Remote Desktop connection.

What should you configure?

- A. Azure Front Door
- B. Microsoft Defender for Cloud
- C. Azure AD Privileged Identity Management (PIM)
- D. a network security group (NSG)

**Answer: B**

#### NEW QUESTION 26

- (Topic 3)

You have a server that runs Windows Server and has the DHCP Server role installed. The server has a scope named Scope1 that has the following configurations:

- Address range: 192.168.0.2 to 192.168.1.2M . Mask 255.255.254.0
- Router: 192.168.0.1
- Lease duration: 3 days
- DNS server 172.16.0.254

You have 50 Microsoft Teams Phone devices from the same vendor. All the devices have MAC addresses within the same range.

You need to ensure that all the Teams Phone devices that receive a lease from Scope1 have IP addresses in the range of 192.168.1.100 to 192.168.1.200. The solution must NOT affect other DHCP clients that receive IP configurations from Scope1.

What should you create?

- A. a policy
- B. a scope
- C. a fitter
- D. scope options

**Answer: A**

#### Explanation:

Reference:

[https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2012-R2-and-2012/dn425040\(v=ws.11\)](https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2012-R2-and-2012/dn425040(v=ws.11))

#### NEW QUESTION 28

HOTSPOT - (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server1 hosts a domain-based Distributed File System (DFS) Namespace named Files.

The domain contains a file server named Server2. Server2 contains a shared folder named Share1. Share1 contains a subfolder named Folder1.

In the Files namespace, you create a folder named Folder1 that has a target of

\\Server2.contoso.com\Share1\Folder1.

You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace.

How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

Answer Area

#### NEW QUESTION 32

- (Topic 3)

You have an Azure subscription that contains the following resources:

- An Azure Log Analytics workspace
- An Azure Automation account
- Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc. You need to manage Microsoft updates on Server1 by using Azure Arc.

Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Add Microsoft Sentinel to the Log Analytics workspace
- B. On Server1, install the Azure Monitor agent
- C. From the Automation account, enable Update Management for Server1.
- D. From the Virtual machines data source of the Log Analytics workspace, connect Server1.

**Answer:** BC

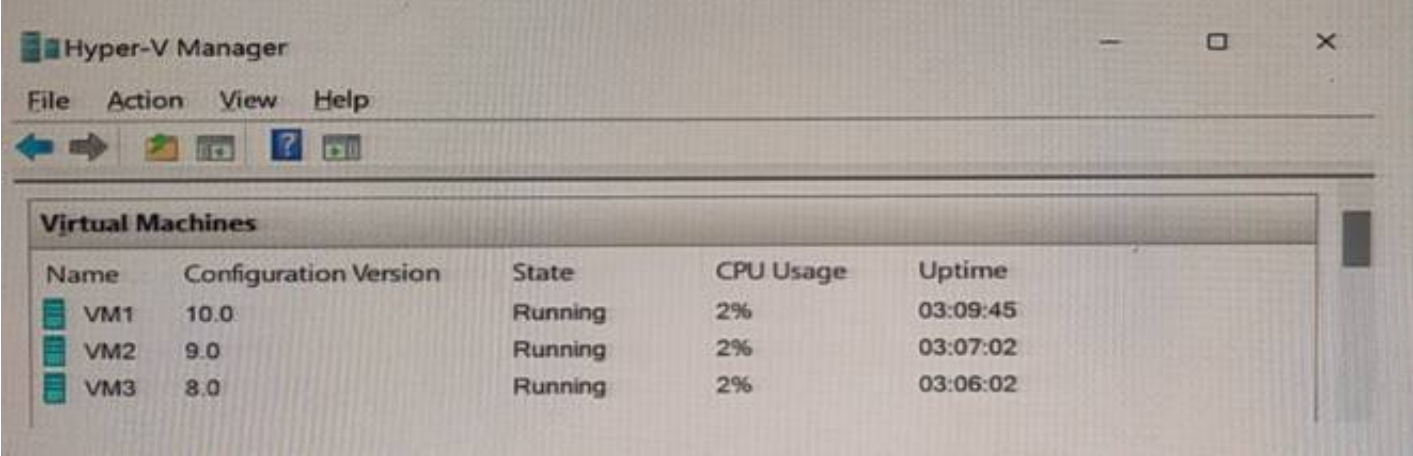

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/azure/cloud-adoption-framework/manage/hybrid/server/best-practices/arc-update-management>

**NEW QUESTION 36**

HOTSPOT - (Topic 3)

You have a server named Server1 that has the Hyper-V server role installed. Server1 hosts the virtual machines shown in the following exhibit.

Name	Configuration Version	State	CPU Usage	Uptime
VM1	10.0	Running	2%	03:09:45
VM2	9.0	Running	2%	03:07:02
VM3	8.0	Running	2%	03:06:02

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
 NOTE: Each correct selection is worth one point.

**Answer Area**

[Answer choice] can have production checkpoints. Only VM1

[Answer choice] can be hibernated. VM1, VM2, and VM3

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

[Answer choice] can have production checkpoints. Only VM1

[Answer choice] can be hibernated. VM1, VM2, and VM3

**NEW QUESTION 37**

HOTSPOT - (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.  
 The network contains the servers shown in the following table.

Name	Role	Domain/workgroup	Operating system
DC1	Active Directory Domain Services, DNS Server	contoso.com	Windows Server
Server1	DHCP Server	contoso.com	Windows Server
Server2	None	contoso.com	Windows Server Core
Server3	None	Workgroup1	Windows Server Core

You plan to implement IP Address Management (IPAM).  
 You need to use the Group Policy based provisioning method for managed servers. The solution must support server discovery.  
 What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer Area**

Server on which to deploy the IPAM server role: Server2

Servers that must be provisioned for IPAM: DC1 and Server1

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

Server on which to deploy the IPAM server role: 

Server2

Servers that must be provisioned for IPAM: 

DC1 and Server1

**NEW QUESTION 40**

- (Topic 3)

You have two servers that have the Hyper-V server role installed. The servers are joined to a failover cluster both servers can connect to the same disk on an iSCSI storage device. You plan to use the iSCSI storage to store highly available Hyper-V virtual machines that will support live migration functionality. You need to configure a storage resource in the failover cluster to store the virtual machines. What should you configure?

- A. a storage pool
- B. attributed File System (DFS) Replication
- C. a mirrored volume
- D. Cluster Shared volumes (CSV)

**Answer:** D

**NEW QUESTION 41**

- (Topic 3)

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You have several Windows 10 devices that are Azure AD hybrid-joined. You need to ensure that when users sign in to the devices, they can use Windows Hello for Business. Which optional feature should you select in Azure AD Connect?

- A. Device writeback
- B. Group writeback
- C. Password writeback
- D. Directory extension attribute sync
- E. Azure AD app and attribute filtering

**Answer:** C

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/windows/security/identity-protection/hello-for-business/hello-hybrid-cert-trust-prereqs>

**NEW QUESTION 42**

- (Topic 3)

Your network contains an on -premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the objects shown in the following table.

Name	Type
User1	User
Group1	Universal security group
Group2	Domain local security group
Computer1	Computer

You plan to sync contoso.com with an Azure Active Directory (Azure AD) tenant by using Azure AD Connect. You need to ensure that all the objects can be used in Conditional Access policies. What should you do?

- A. Change the scope of Group2 to Universal
- B. Clear the Configure device writeback option.
- C. Change the scope of Group1 and Group2 to Global
- D. Select the Configure Hybrid Azure AD join option.

**Answer:** D

**Explanation:**

Hybrid Azure AD join needs to be configured to enable Computer1 to be used in Conditional Access Policies. Synchronized users, universal groups and domain local groups can be used in Conditional Access Policies.

**NEW QUESTION 44**

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. You need to identify which server is the PDC emulator for the domain. Solution: From Active Directory Sites and Services, you right-click Default-First-Site-Name in the console tree, and then select Properties.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**NEW QUESTION 47**

- (Topic 3)

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains three servers that run Windows Server and have the Hyper-V server role installed. Each server has a Switch Embedded Teaming (SET) team. You need to verify that Remote Direct Memory Access (RDMA) and all the required Windows Server settings are configured properly on each server. What should you use?

- A. Server Manager
- B. the validate-DCB cmdlet
- C. the Get-NetAdapter cmdlet
- D. Failover Cluster Manager

**Answer:** B

**Explanation:**

Reference: <https://github.com/Microsoft/Validate-DCB>

**NEW QUESTION 51**

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain. You plan to use Active Directory Administrative Center to create a new user named User1. Which two attributes are required to create User1? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. Password
- B. Profile path
- C. User SamAccountName logon
- D. Full name
- E. First name
- F. User UPN logon

**Answer:** AC

**NEW QUESTION 55**

- (Topic 3)

You have five file servers that run Windows Server. You need to block users from uploading video files that have the .mov extension to shared folders on the file servers. All other types of files must be allowed. The solution must minimize administrative effort. What should you create?

- A. a Dynamic Access Control central access policy
- B. a file screen
- C. a Dynamic Access Control central access rule
- D. a data loss prevention (DLP) policy

**Answer:** B

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/windows-server/storage/fsrm/file-screening-management>

**NEW QUESTION 60**

HOTSPOT - (Topic 3)

You have on-premises servers that run Windows Server as shown in the following table.

Name	Local content
Server1	D:\Folder1\File1.docx
Server2	D:\Data1\File3.docx

You have an Azure file share named share1 that stores two files named File2.docx and File3.docx. You create an Azure File Sync sync group that includes the following endpoints:  
? share  
? D:\Folder1 on Server1  
? D:\Data1 on Server2  
For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can create a file named File2.docx in D:\Folder1 on Server1.	<input type="checkbox"/>	<input type="checkbox"/>
You can create a file named File1.docx in D:\Data1 on Server2.	<input type="checkbox"/>	<input type="checkbox"/>
File3.docx will sync to Server1.	<input type="checkbox"/>	<input type="checkbox"/>

- A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Statements	Yes	No
You can create a file named File2.docx in D:\Folder1 on Server1.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
You can create a file named File1.docx in D:\Data1 on Server2.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
File3.docx will sync to Server1.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

NEW QUESTION 61

DRAG DROP - (Topic 3)

You deploy a single-domain Active Directory Domain Services (AD DS) forest named contoso.com.  
You deploy five servers to the domain. You add the servers to a group named iTFarmHosts.  
You plan to configure a Network Load Balancing (NLB) cluster named NLBCluster.contoso.com that will contain the five servers.  
You need to ensure that the NLB service on the nodes of the cluster can use a group managed service account (gMSA) to authenticate.  
Which three PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Cmdlets

Add-KdsRootKey

Set-KdsConfiguration

Install-ADServiceAccount

Add-ADGroupMember

New-ADServiceAccount

Add-ADComputerServiceAccount

NEW QUESTION 62

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.  
You need to identify which server is the PDC emulator for the domain. Solution: From a command prompt, you run netdom.exe query fsmo. Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

Reference:  
<https://activedirectorypro.com/how-to-check-fsmo-roles/>

**NEW QUESTION 66**

- (Topic 3)  
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.  
You are planning the deployment of DNS to a new network.  
You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.conloso.local and west.contoso.local. All the DNS servers use root hints.  
You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.  
Solution: On Server2 and Server3, you configure a conditional forwarder for contoso.local. Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

[https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2008-r2-and-2008/cc794735\(v=ws.10\)](https://docs.microsoft.com/en-us/previous-versions/windows/it-pro/windows-server-2008-r2-and-2008/cc794735(v=ws.10))

**NEW QUESTION 71**

- (Topic 3)  
You have an Azure subscription that contains the storage accounts shown in the following table.

Name	Location	File share	Blob container
storage1	West US	share1	None
storage2	West US	share2	container2
storage3	Central US	share3	None
storage4	Central US	share4	container4

In the West US Azure region, you create a storage sync service named SyncA. You plan to create a sync group named GroupA.  
What is the maximum number of cloud endpoints you can use with GroupA?

- A. 1
- B. 2
- C. 3
- D. 4

**Answer:** B

**NEW QUESTION 74**

HOTSPOT - (Topic 3)  
You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint. You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1. For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	<input type="radio"/>	<input type="radio"/>
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	<input type="radio"/>	<input type="radio"/>
You can add D:\Data from Server2 as a server endpoint in Group1.	<input type="radio"/>	<input type="radio"/>

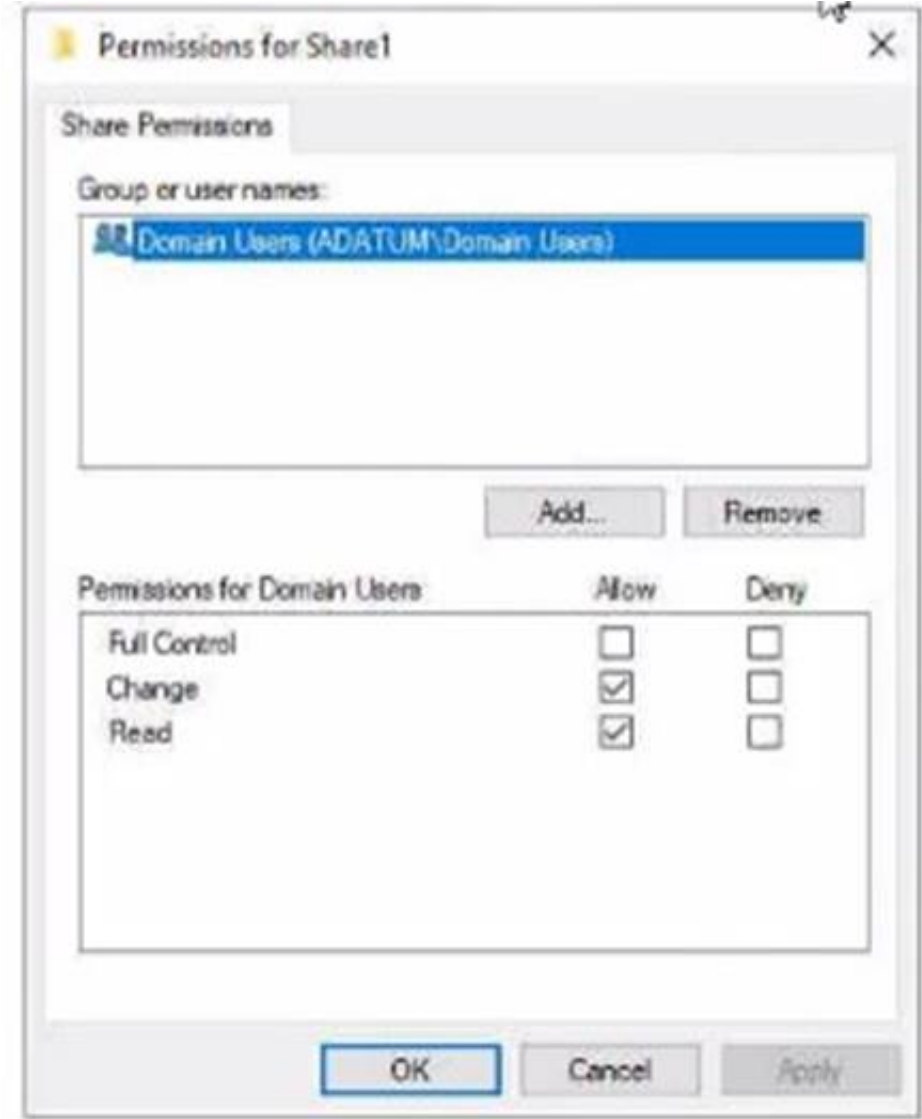

- A. Mastered
- B. Not Mastered

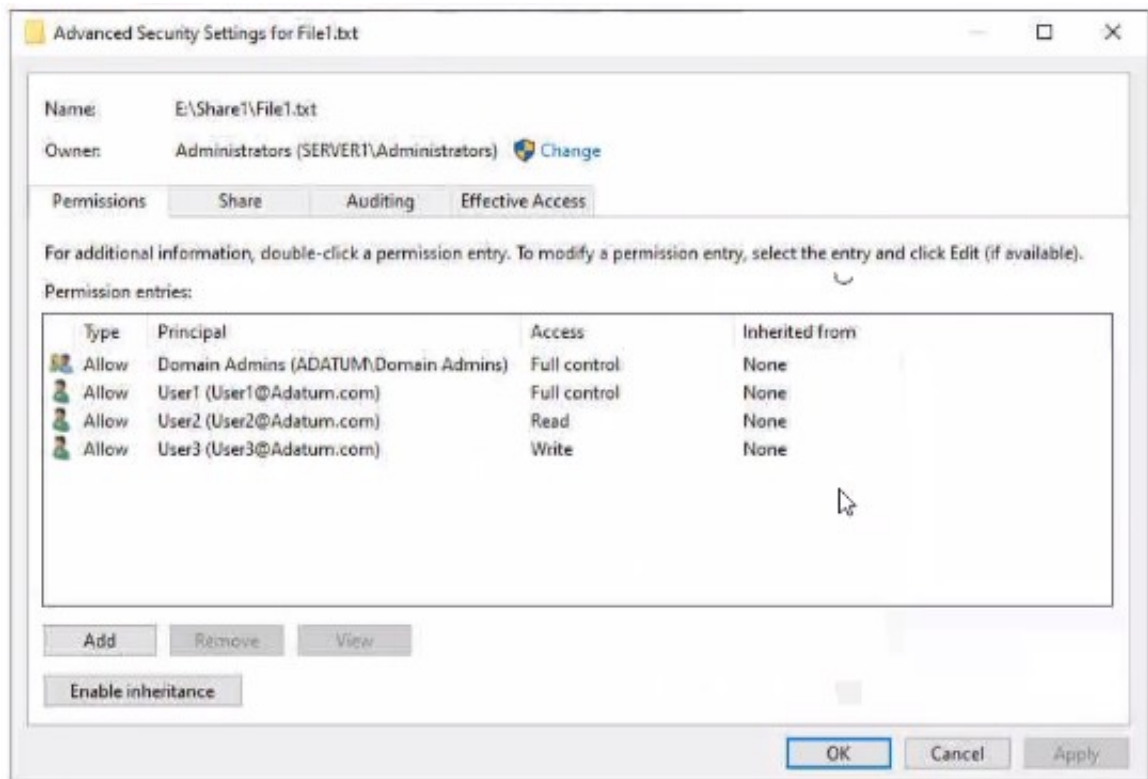

Answer: A

Explanation:

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	<input type="radio"/>	<input checked="" type="radio"/>
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	<input checked="" type="radio"/>	<input type="radio"/>
You can add D:\Data from Server2 as a server endpoint in Group1.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 75  
HOTSPOT - (Topic 3)  
Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com.

The domain contains a 'He server named Server1 and three users named User1. User2 and User), Server1 contains a shared folder named Share1 tha1 has the following configurations:

```
ShareState      : Online
AvailabilityType : NonClustered
FolderEnumerationMode : AccessBased
CachingMode     : Manual
LeasingMode     : Full
SmbInstance     : Default
CompressData    : False
ContinuouslyAvailable : False
EncryptData     : False
Name            : Share1
Path            : E:\Share1
ShadowCopy      : False
```

The share permissions for Share1 are configured as shown in the Share Permissions exhibit. (Click the Share Permissions tab.) Share! contains a file named File1.txt. The advanced security settings for File1.txt are configured as shown in the File Permissions exhibit. (Click the File Permissions tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: f ach correct selection is worth one point.

Answer Area			
Statements		Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.		<input type="radio"/>	<input type="radio"/>
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.		<input type="radio"/>	<input type="radio"/>
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.		<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area			
Statements		Yes	No
When User1 connects to \\Server1.adatum.com\Share1\, the user can take ownership of File1.txt.		<input type="radio"/>	<input checked="" type="radio"/>
When User2 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.		<input checked="" type="radio"/>	<input type="radio"/>
When User3 connects to \\Server1.adatum.com\Share1\, File1.txt is visible.		<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 79

- (Topic 3)  
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are planning the deployment of DNS to a new network. You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints. You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: You configure Server2 and Server3 to forward DNS requests to 10.0.1.10. Does this meet the goal?

- A. Yes
- B.

No

**Answer:** B

#### NEW QUESTION 81

- (Topic 3)

You have an on premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. The domain contains two servers named Server1 and Server2.

A user named Admin1 is a member of the local Administrators group on Server1 and Server2.

You plan to manage Server1 and Server2 by using Azure Arc. Azure Arc objects will be added to a resource group named RG1.

You need to ensure that Admin1 can configure Server1 and Server2 to be managed by using Azure Arc.

What should you do first?

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-arc/servers/onboard-service-principal>

#### NEW QUESTION 82

- (Topic 3)

You have an Active Directory Domain Services (AD DS) domain. The domain contains a member server named Server1 that runs Windows Server.

You need to ensure that you can manage password policies for the domain from Serve1. Which command should you run first on Server1?

- A. Install-Windows Feature RSAT-AO-PowerShell
- B. Install-Windows Feature 6PHC
- C. Install-Windows Feature RSAT-AD-Tool\$
- D. Install-windows Feature RSAT-AWIMS

**Answer:** C

#### NEW QUESTION 83

- (Topic 3)

You have a server named Server1 that runs Windows Server and contains two drives named C and D. Server1 hosts multiple file shares.

You enable Data Deduplication on drive D and select the General purpose file server workload.

You need to minimize the space consumed by files that were recently modified or deleted. What should you do?

- A. Run the set-dedupvolume cmdlet and configure the scrubbing job.
- B. Run the Set-DedupSchedule Cmdlet and configure a GarbageCollection job.
- C. Run the set-Dedupvoiume cmdlet and configure the InputOutputScale settings.
- D. Run the Set-DedupSchedule cmdlet and configure the optimization job.

**Answer:** B

#### NEW QUESTION 84

HOTSPOT - (Topic 3)

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

Name	Domain	Description
Server1	contoso.com	Hosts a Windows Admin Center gateway
Server2	fabrikam.com	Hosts resources that will be managed remotely by using Windows Admin Center on Server1

You need to configure resources based constrained delegation so that the users In contoso.com can use Windows Admin Center on Server) to connect to Server? How should you complete the command? To answer, select the appropriate options in the answer area.  
 NOTE: Each correct selection is worth one point.

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Answer Area

Set-ADComputer -Identity

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

-PrincipalsAllowedToDelegateToAccount

(Get-ADComputer server1.contoso.com)

(Get-ADComputer server2.fabrikam.com)

(Get-ADGroup 'Contoso\Domain Users')

(Get-ADGroup 'Fabrikam\Domain Users')

### NEW QUESTION 85

- (Topic 3)

You have servers that have the DNS Server role installed. The servers are configured as shown in the following table.

Name	Office	Local DNS zone	IP address
Server1	Paris	contoso.com	10.1.1.1
Server2	New York	None	10.2.2.2

All the client computers in the New York office use Server2 as the DNS server. You need to configure name resolution in the New York office to meet the following requirements:

- ? Ensure that the client computers in New York can resolve names from contoso.com.
- ? Ensure that Server2 forwards all DNS queries for internet hosts to 131.107.100.200.

The solution must NOT require modifications to Server1. Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. a forwarder
- B. a conditional forwarder
- C. a delegation
- D. a secondary zone
- E. a reverse lookup zone

**Answer: AB**

**Explanation:**

A conditional forwarder is required for contoso.com. A forwarder is required for all other domains.

When you have a conditional forwarder and a forwarder configured, the conditional forwarder will be used for the specified domain.

You could use a secondary zone for contoso.com but that would require a configuration change on Server1.

### NEW QUESTION 90

- (Topic 2)

You need to configure the Group Policy settings to ensure that the Azure Virtual Desktop session hosts meet the security requirements. What should you configure?

- A. security filtering for the link of GP04
- B. security filtering for the link of GPO1
- C. loopback processing in GPO4
- D. the Enforced property for the link of GP01
- E. loopback processing in GPO1
- F. the Enforced property for the link of GP04

**Answer: C**

### NEW QUESTION 92

- (Topic 1)

You need to meet the technical requirements for Server1. Which users can currently perform the required tasks?

- A. Admin1 only

- B. Admin3 only
- C. Admin1 and Admin3 only
- D. Admin1 Admin2. and Admm3

**Answer:** C

**NEW QUESTION 96**
