You need to identify whether Teams calls use TCP or UDP. What should you review in the Microsoft Call Quality Dashboard?

A. Quality of Experience Reports
B. Quality Drill Down Reports
C. Endpoint Reports
D. Reliability Reports

Answer: C

Explanation:
According to the Microsoft documentation3, you can use Endpoint Reports in the Microsoft Call Quality Dashboard (CQD) to identify whether Teams calls use TCP or UDP. Endpoint Reports show information about the devices and networks used in Teams
calls and meetings, such as device name, manufacturer, model, OS version, network type, IP address, and transport protocol (TCP or UDP).
To access Endpoint Reports in CQD, you need to follow these steps3:
? Sign in to CQD with your admin account.
? In the left navigation pane, select Reports > Endpoint.
? In the report list page, select one of the predefined endpoint reports, such as Endpoint by Manufacturer or Endpoint by Network Type.
? In the report details page, you can see various metrics and filters for the selected report. You can also customize the report by adding or removing dimensions and measures.
? To see whether Teams calls use TCP or UDP, you need to add Transport Protocol as a dimension to the report. To do this, select Add dimension, and then select Transport Protocol from the drop-down list.
? The report will show the distribution of TCP and UDP usage for Teams calls based on the selected report type.

NEW QUESTION 18
- (Topic 5)
You have a Microsoft 365 subscription that uses Microsoft Teams.
You feed 10 identify which teams were inactive during the past 90 days. What should you use?

A. Teams advisor
B. the Office 365 Groups activity report
C. the Teams user activity report
D. the Teams usage report

Answer: D

Explanation:
According to the Microsoft documentation1, you can use the Teams usage report in the Microsoft Teams admin center to get an overview of the usage activity in Teams. This includes the number of active users, channels, guests, and post messages via chat and conversations to know how many users in each team are actively using Teams to communicate and collaborate. However, this report only shows the last 7 or 28 days of activity of teams, which may not be enough to identify inactive teams over a longer period. Alternatively, you can use PowerShell scripts to generate activity reports that check the audit records of inactive teams and provide an HTML report file based on SharePoint site activity in the group's document library in the past 90 days and conversations that occurred in the mailbox in the past year2. However, this method requires writing complex and time- consuming PowerShell commands, which may not be feasible for administrators who need to produce multiple reports on a daily basis.
Another method to detect inactive teams in your Teams environment is by setting an expiration policy for the associated group in Azure AD. This notifies the owner of the team or group by sending an email to renew or delete the team after specified days if no activity is detected3. However, this method also has some drawbacks, such as:
? The owner may fail to notice the email or renew the team within the timeline of the
configured policy, resulting in the team being deleted automatically and not being restorable after 30 days.
? The expiration policy applies to all Microsoft 365 groups in an Azure AD
organization, not just Teams. This may affect other groups that are not related to Teams.
? The expiration policy requires Azure AD Premium licenses for the members of all
groups to which the policy is applied.
Therefore, based on this information, the correct answer is D. the Teams usage report. This report is the most straightforward and accessible way to find inactive teams in Microsoft Teams, even though it has some limitations. The other options are either not related to finding inactive teams (Teams advisor) or require additional licenses or permissions (the Office 365 Groups activity report and the Teams user activity report).

All team members can add the Microsoft Planner app to a team.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
"Allow interaction with custom apps" in the org-wide policy and "upload custom apps" in the global policy are set to on. This means that users can upload custom apps to teams that allow it and to teams for which they are owners.
Box 2: Yes

The global policy allows Microsoft Flow.
Box 3: No
The global policy allows Microsoft Planner. However, the org-wide settings blocks Microsoft Planner. In this case, the org-wide policy blocking the app will override the global policy meaning the app will be blocked. When an app is blocked, users will not be able to add the app to a team.

You need to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion
You install the Network Testing Companion module on a local Windows 10 device. Which additional software should you install to perform the tests?

A. the Microsoft Teams desktop client
B. Network Assessment Tool
C. Windows Assessment Toolkit
D. Windows Performance Analyzer (WPA)

Answer: B

Explanation:
According to the Microsoft documentation1, the Network Testing Companion is a PowerShell module that allows you to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion. The Network Testing Companion module requires the following software to be installed on the local Windows 10 device:
? PowerShell 5.1 or later
? .NET Framework 4.7.2 or later
? Microsoft Teams Network Assessment Tool
The Microsoft Teams Network Assessment Tool is a tool that tests the connectivity to various Teams servers deployed in the Microsoft Azure network. It measures network performance by streaming packets to the nearest edge site and back for a configurable amount of time2.
Therefore, based on this information, the correct answer is B. Network Assessment Tool. This tool is required to perform network quality and connectivity tests by using the Network Testing Companion module. The other options are either not related to network testing (the Microsoft Teams desktop client and Windows Performance Analyzer) or not required for the Network Testing Companion module (Windows Assessment Toolkit).
