How to implement

Microsoft recommends that your organization enable self-service password reset to allow users who have either forgotten their password or whose account has been locked out as a result of malicious attempts, using an alternate factor to reset their password without the assistance of the help desk.

How to Use Microsoft Solutions to Implement

Your organization can use Azure Active Directory (Azure AD) to give users the ability to change or reset their password with no administrator or help desk involvement. Select **Launch Now** to enable Self-Service Password Reset (SSPR) by selecting "All" or "Selected" on the "Properties" page to determine applicable users.

B. Not Mastered

Answer: A

Explanation:

User 1, Group 1, and Group 2 27/27

SSPR (Self-Service Password Reset) does not require an E5 license. SSPR is included in Microsoft 365 and Office 365 subscriptions, including lower-tiered plans

such as Microsoft 365 Business Standard and Office 365 E3.

Microsoft 365 Groups can be configured to use SSPR (Self-Service Password Reset). In fact, Microsoft 365 Groups inherit the SSPR settings from the underlying Azure Active Directory (Azure AD) tenant.

SSPR (Self-Service Password Reset) can also be configured for security groups in Microsoft 365.

Like Microsoft 365 Groups, security groups in Microsoft 365 inherit the SSPR settings from the underlying Azure Active Directory (Azure AD) tenant. To enable SSPR for security groups, you need to ensure that SSPR is enabled in your Azure AD tenant and that the appropriate user accounts are registered for SSPR.
