

Exam Questions NSE7_PBC-6.4

Fortinet NSE 7 - Public Cloud Security 6.4

https://www.2passeasy.com/dumps/NSE7_PBC-6.4/

NEW QUESTION 1

What is the bandwidth limitation of an Amazon Web Services (AWS) transit gateway VPC attachment?

- A. Up to 1.25 Gbps per attachment
- B. Up to 50 Gbps per attachment
- C. Up to 10 Gbps per attachment
- D. Up to 1 Gbps per attachment

Answer: A

NEW QUESTION 2

Refer to the exhibit.

The screenshot shows the AWS Management Console interface for a VPC. On the left, the 'Route Tables' section is highlighted. The main area displays a table of route tables:

Name	Route Table ID	Explicit subnet associator	Edge associations	Main	VPC ID	Owner
Private-route	rtb-040fce40e7029a32c	subnet-0c67f580822971d87	-	No	vpc-061d585389183ad02 ...	262226454685
Public-route	rtb-051b77e3c10a46085	subnet-08ff4de2fbadfa72	-	Yes	vpc-061d585389183ad02 ...	262226454685

Below the table, the 'Route Table: rtb-051b77e3c10a46085' is expanded to show its routes:

Destination	Target	Status
10.0.0.0/16	local	active
0.0.0.0/0	igw-08e87b162f8182999	active

In your Amazon Web Services (AWS) virtual private cloud (VPC), you must allow outbound access to the internet and upgrade software on an EC2 instance, without using a NAT instance. This specific EC2 instance is running in a private subnet: 10.0.1.0/24. Also, you must ensure that the EC2 instance source IP address is not exposed to the public internet. There are two subnets in this VPC in the same availability zone, named public (10.0.0.0/24) and private (10.0.1.0/24). How do you achieve this outcome with minimum configuration?

- A. Deploy a NAT gateway with an EIP in the private subnet, edit the public main routing table, and change the destination route 0.0.0.0/0 to the target NAT gateway.
- B. Deploy a NAT gateway with an EIP in the public subnet, edit route tables, select Public-route, and delete the route destination 10.0.0.0/16 to target local.
- C. Deploy a NAT gateway with an EIP in the private subnet, edit route tables, select Private-route, and add a new route destination 0.0.0.0/0 to the target internet gateway.
- D. Deploy a NAT gateway with an EIP in the public subnet, edit route tables, select Private-route and add a new route destination 0.0.0.0/0 to target the NAT gateway.

Answer: C

NEW QUESTION 3

You have been tasked with deploying FortiGate VMs in a highly available topology on the Amazon Web Services (AWS) cloud. The requirements for your deployment are as follows:

- You must deploy two FortiGate VMs in a single virtual private cloud (VPC), with an external elastic load balancer which will distribute ingress traffic from the internet to both FortiGate VMs in an active-active topology.
- Each FortiGate VM must have two elastic network interfaces: one will connect to a public subnet and other will connect to a private subnet.
- To maintain high availability, you must deploy the FortiGate VMs in two different availability zones. How many public and private subnets will you need to configure within the VPC?

- A. One public subnet and two private subnets
- B. Two public subnets and one private subnet
- C. Two public subnets and two private subnets
- D. One public subnet and one private subnet

Answer: A

NEW QUESTION 4

You have been asked to secure your organization's salesforce application that is running on Microsoft Azure, and find an effective method for inspecting shadow IT activities in the organization. After an initial investigation, you find that many users access the salesforce application remotely as well as on-premises. Your goal is to find a way to get more visibility, control over shadow IT-related activities, and identify any data leaks in the salesforce application. Which three steps should you take to achieve your goal? (Choose three.)

- A. Deploy and configure FortiCASB with a Fortinet FortiCASB subscription license.
- B. Configure FortiCASB and set up access rights, privileges, and data protection policies.
- C. Use FortiGate, FortiGuard, and FortiAnalyzer solutions.
- D. Deploy and configure FortiCWP with a workload guardian license.
- E. Deploy and configure FortiGate with Security Fabric solutions, and FortiCWP with a storage guardian advance license.

Answer: ABC

NEW QUESTION 5

Refer to the exhibit.

```
207     "osDisk": {
208         "osType": "Linux",
209         "name": "sstentazfgt0402build3232disk01",
210         "caching": "ReadWrite",
211         "createOption": "Empty",
212         "managedDisk": {
213             "storageAccountType": "Standard_LRS"
214         },
215         "diskSizeGB": 2
216     },
217     "dataDisks": {
218         {
219             "lun": 0,
220             "name": "sstentazfgt0402build3232disk02",
221             "createOption": "Empty",
222             "caching": "None",
223             "managedDisk": {
224                 "storageAccountType": "Standard_LRS"
225             },
226             "diskSizeGB": 30
227         },
228     ],
229 }
```

You attempted to deploy the FortiGate-VM in Microsoft Azure with the JSON template, and it failed to boot up. The exhibit shows an excerpt from the JSON template.

What is incorrect with the template?

- A. The LUN ID is not defined.
- B. FortiGate-VM does not support managedDisk from Azure.
- C. The caching parameter should be None.
- D. The CreateOptions parameter should be FromImage.

Answer: D

NEW QUESTION 6

An organization deployed a FortiGate-VM in the Google Cloud Platform and initially configured it with two vNICs. Now, the same organization wants to add additional vNICs to this existing FortiGate-VM to support different workloads in their environment.

How can they do this?

- A. They can create additional vNICs using the Cloud Shell.
- B. They cannot create and add additional vNICs to an existing FortiGate-VM.
- C. They can create additional vNICs in the UI console.
- D. They can use the Compute Engine API Explorer.

Answer: D

NEW QUESTION 7

A company deployed a FortiGate-VM with an on-demand license using Amazon Web Services (AWS) Market Place Cloud Formation template. After deployment, the administrator cannot remember the default admin password.

What is the default admin password for the FortiGate-VM instance?

- A. The admin password cannot be recovered and the customer needs to deploy the FortiGate-VM again.
- B. <blank>
- C. admin
- D. The instance-ID value

Answer: D

NEW QUESTION 8

When configuring the FortiCASB policy, which three configuration options are available? (Choose three.)

- A. Intrusion prevention policies
- B. Threat protection policies
- C. Data loss prevention policies
- D. Compliance policies

E. Antivirus policies

Answer: BCD

NEW QUESTION 10
