NEW QUESTION 1
- (Exam Topic 1)
15 VMs are running on a Hyper-V platform and five physical servers at a remote office (ROBO). The administrator has been tasked with setting up centralized off-site backups at the headquarters (HQ). The available bandwidth is 50 Mbps. RPO is set to six hours and the data generated for the interval is 500 GB. WAN accelerators can be added if necessary. Which of the following will achieve the RPO?

A. Use backup copy jobs in with High-Performance Mode enable
B. Set the schedule to run every six hours.
C. Use backup copy jobs with copy mode set to "immediate copy". Use WAN acceleration.
D. Use backup copy jobs with copy mode set to "periodic copy" and copy every six hours.
E. Configure the backup copy jobs with traffic throttling to 30 Mbps to limit the impac
F. Enable WAN acceleration.

Answer: B

Explanation:
According to the Veeam Backup & Replication user guide12, WAN acceleration is a technology that optimizes data transfer to remote locations by performing deduplication and caching. It is specific for off-site backup copy jobs and replication jobs12.
Therefore, if you want to achieve the RPO of six hours with 500 GB of data and 50 Mbps of bandwidth, you should use backup copy jobs with WAN acceleration enabled. This will reduce the amount of data that nee to be transferred over the network and speed up the backup process12. The simplest configuration would be an immediate copy mode with WAN acceleration

NEW QUESTION 7
- (Exam Topic 1)
A daily backup job for seven Hyper-V VMs has been configured at the main site, keeping 14 days' worth of backup files. They want to get a copy of the VM backups to a repository at the disaster recovery site. They want to keep six months' worth of backup files at the disaster recovery site. They also need to be able to restore the VMs to any given day within two months and any given week within six months. How should a backup copy job be configured to meet these requirements?

A. Use periodic copy (pruning) mode, keeping 180 days of retention.
B. Use immediate copy (mirroring) mode, keeping 62 days of retention and 26 weekly GFS restore points.
C. Use periodic copy (pruning) mode, keeping 62 days of retention and six monthly GFS restore points.
D. Use immediate copy (mirroring) mode, keeping 180 days of retention.

Answer: B

Explanation:
According to the Veeam Backup & Replication user guide1, you can use a long-term retention policy (GFS) keep backup files for longer periods of time. GFS stands for grandfather-father-son and refers to a backup rotation scheme that allows you to create weekly, monthly, quarterly and yearly restore points12.
Therefore, if you want to be able to restore the VMs to any given day within two months and any given week within six months, you should use a GFS policy with 62 days of retention and 26 weekly GFS restore points. The simplest configuration would be an immediate copy (mirroring) mode with these settings (option B).

NEW QUESTION 8
- (Exam Topic 1)
A Windows VM running on Microsoft Hyper-V is protected using the file indexing option. The guest interaction proxy is offline. Which of the following Veeam servers will be used to deploy the runtime during the backup process?

A. Backup & Replication server
B. Indexing database server
C. File proxy server
D. Virtual lab server

Answer: A

Explanation:
https://helpcenter.veeam.com/archive/backup/110/hyperv/guest_interaction_proxy.html
According to the Veeam Software Help Center1, Veeam Backup & Replication deploys runtime components on a VM guest OS to perform file indexing. These components can be either non-persistent or persistent depending on whether you have enabled application-aware processing for the VM.
If you have enabled application-aware processing for the VM, Veeam Backup & Replication uses a persistent agent component that is installed on the VM guest OS during backup job session and remains on the VM after that. In this case, if the guest interaction proxy is offline, Veeam Backup & Replication will use another available guest interaction proxy or fail over to the backup server.
If you have not enabled application-aware processing for the VM, Veeam Backup & Replication uses a
non-persistent runtime component that is deployed on the fly and removed after indexing is complete. In this case, if the guest interaction proxy is offline, Veeam Backup & Replication will use another available guest interaction proxy or fail over to the backup server.

NEW QUESTION 9
- (Exam Topic 1)
An administrator has decided to set up a VM backup job covering their Microsoft SOL servers. What feature must be enabled to ensure quiescence of the SQL databases during the backup?

B. Enable application-aware processing.
C. Enable Microsoft Windows OS processing.
D. Enable Microsoft SQL server agent on the VMs

Answer: B

Explanation:

A. Run Veeam file restore wizard and let it restore through VIX.
B. Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore.
C. It is impossible to restore the file on the VM if the mount server cannot reach it through the network.
D. Run Veeam file restore wizard and use the "copy to" to download the file locally in a shared folder.

Answer: A

Explanation:
According to the Veeam Backup & Replication user guide1, you can use the File Level Restore wizard to restore files and folders from VM guest OSes that run Windows2. The wizard allows you to choose how to access the VM guest OS: through network or through VIX2VIX is a VMware API that enables programmatic access to virtual machine operations3.
Therefore, if you want to restore a file on a Windows VM hosted on vSphere and the mount server cannot connect to the VM through the network, you can use VIX as an alternative method of access2. This will allow you to restore the file directly to its original location without downloading it locally or starting an Instant VM Recovery session.
